---

9.4	How to Apply These Terms to Your New Programs . . . . .	85
<b>10</b>	<b>Documentation Rules</b>	<b>86</b>
10.1	General Rules . . . . .	86
10.2	File Header . . . . .	87
10.3	Grouping Various Parts . . . . .	87
<b>11</b>	<b>Main features</b>	<b>87</b>
11.1	Standard Airline IT Business Object Model (BOM) . . . . .	88
11.2	Architecture of the StdAir library . . . . .	88
<b>12</b>	<b>Make a Difference</b>	<b>88</b>
<b>13</b>	<b>Make a new release</b>	<b>89</b>
13.1	Introduction . . . . .	89
13.2	Initialisation . . . . .	89
13.3	Branch creation . . . . .	89
13.4	Commit and publish the release branch . . . . .	89
13.5	Update the change-log in the trunk as well . . . . .	89
13.6	Create distribution packages . . . . .	90
13.7	Generation the RPM packages . . . . .	90
13.8	Update distributed change log . . . . .	90
13.9	Create the binary package, including the documentation . . . . .	90
13.10	Upload the files to SourceForge . . . . .	91
13.11	Upload the documentation to SourceForge . . . . .	91
13.12	Make a new post . . . . .	91
13.13	Send an email on the announcement mailing-list . . . . .	91
<b>14</b>	<b>Installation</b>	<b>91</b>
14.1	Table of Contents . . . . .	91
14.2	Fedora/RedHat Linux distributions . . . . .	92
14.3	StdAir Requirements . . . . .	92
14.4	Basic Installation . . . . .	93
14.5	Compilers and Options . . . . .	94
14.6	Compiling For Multiple Architectures . . . . .	94
14.7	Installation Names . . . . .	94
14.8	Optional Features . . . . .	95
14.9	Particular systems . . . . .	96
14.10	Specifying the System Type . . . . .	96

14.11 Sharing Defaults . . . . .	97
14.12 Defining Variables . . . . .	97
14.13 'cmake' Invocation . . . . .	97
<b>15 Linking with StdAir . . . . .</b>	<b>101</b>
15.1 Table of Contents . . . . .	101
15.2 Introduction . . . . .	101
15.3 Using the pkg-config command . . . . .	102
15.4 Using the stdair-config script . . . . .	102
15.5 M4 macro for the GNU Autotools . . . . .	102
15.6 Using StdAir with dynamic linking . . . . .	103
<b>16 Test Rules . . . . .</b>	<b>103</b>
16.1 The Test Source Files . . . . .	103
16.2 The Reference File . . . . .	103
16.3 Testing StdAir Library . . . . .	103
<b>17 Users Guide . . . . .</b>	<b>104</b>
17.1 Table of Contents . . . . .	104
17.2 Introduction . . . . .	104
17.3 Get Started . . . . .	104
17.3.1 Get the StdAir library . . . . .	104
17.3.2 Build the StdAir project . . . . .	104
17.3.3 Build and Run the Tests . . . . .	104
17.3.4 Install the StdAir Project (Binaries, Documentation) . . . . .	104
17.4 Exploring the Predefined BOM Tree . . . . .	104
17.4.1 Airline Distribution BOM Tree . . . . .	105
17.4.2 Airline Network BOM Tree . . . . .	105
17.4.3 Airline Inventory BOM Tree . . . . .	105
17.5 Extending the BOM Tree . . . . .	105
<b>18 Supported Systems . . . . .</b>	<b>105</b>
18.1 Table of Contents . . . . .	105
18.2 Introduction . . . . .	106
18.3 StdAir 3.10.x . . . . .	106
18.3.1 Linux Systems . . . . .	106
18.3.2 Windows Systems . . . . .	110
18.3.3 Unix Systems . . . . .	113

<b>19 StdAir Supported Systems (Previous Releases)</b>	<b>114</b>
19.1 StdAir 3.9.1 . . . . .	114
19.2 StdAir 3.9.0 . . . . .	114
19.3 StdAir 3.8.1 . . . . .	114
<b>20 Tutorials</b>	<b>114</b>
20.1 Table of Contents . . . . .	114
20.2 Introduction . . . . .	114
20.2.1 Preparing the StdAir Project for Development . . . . .	114
20.3 Build a Predefined BOM Tree . . . . .	114
20.3.1 Instanciate the BOM Root Object . . . . .	115
20.3.2 Instanciate the (Airline) Inventory Object . . . . .	115
20.3.3 Link the Inventory Object with the BOM Root . . . . .	115
20.3.4 Build Another Airline Inventory . . . . .	115
20.3.5 Dump The BOM Tree Content . . . . .	116
20.3.6 Result of the Tutorial Program . . . . .	117
20.4 Extend the Pre-Defined BOM Tree . . . . .	119
20.4.1 Extend an Airline Inventory Object . . . . .	119
20.4.2 Build the Specific BOM Objects . . . . .	119
20.4.3 Result of the Tutorial Program . . . . .	120
<b>21 Command-Line Utility to Demonstrate Typical StdAir Usage</b>	<b>120</b>
<b>22 Specific Implementation of a BOM Root</b>	<b>125</b>
<b>23 Specific Implementation of a BOM Root</b>	<b>125</b>
<b>24 Specific Implementation of an Airline Inventory</b>	<b>126</b>
<b>25 Specific Implementation of an Airline Inventory</b>	<b>126</b>
<b>26 Command-Line Test to Demonstrate How To Extend StdAir BOM</b>	<b>127</b>
<b>27 Namespace Index</b>	<b>133</b>

## 1 StdAir Documentation

### 1.1 Getting Started

- [Main features](#)
- [Installation](#)
- [Linking with StdAir](#)
- [Users Guide](#)
- [Tutorials](#)
- [Copyright and License](#)
- [Make a Difference](#)
- [Make a new release](#)
- [People](#)

### 1.2 StdAir at SourceForge

- [Project page](#)
- [Download StdAir](#)
- [Open a ticket for a bug or feature](#)

- Mailing lists
- Forums
  - Discuss about Development issues
  - Ask for Help
  - Discuss StdAir

### 1.3 StdAir Development

- Git Repository (Subversion is deprecated)
- Coding Rules
- Documentation Rules
- Test Rules

### 1.4 External Libraries

- Boost (C++ STL extensions)
- ZeroMQ (networking made easy)
- Python
- MySQL client
- SOCI (C++ DB API)

### 1.5 Support StdAir

### 1.6 About StdAir

StdAir is a C++ library of classes and functions modeling typical airline IT business objects. For instance, it is used by the C++ Revenue Management Open Library project (<http://sourceforge.net/projects/rmol/>). StdAir mainly targets simulation purposes. N

StdAir makes an extensive use of existing open-source libraries for increased functionality, speed and accuracy. In particular Boost (C++ STL Extensions) library is used.

The StdAir library originates from the department of Operational Research and Innovation at Amadeus, Sophia Antipolis, France. StdAir is released under the terms of the GNU Lesser General Public License (LGPLv2.1) for you to enjoy.

StdAir should work on GNU/Linux, Sun Solaris, Microsoft Windows (with Cygwin, MinGW/MSYS, or Microsoft Visual C++ .NET) and Mac OS X operating systems.

#### Note:

(N) - The StdAir library is **NOT** intended, in any way, to be used by airlines for production systems. If you want to report issue, bug or feature request, or if you just want to give feedback, have a look on the right-hand side of this page for the preferred reporting methods. In any case, please do not contact Amadeus directly for any matter related to StdAir.

## 2 BomAbstract

Abstract part of the Business Object Model (BOM)

## 8 Coding Rules

In the following sections we describe the naming conventions which are used for files, classes, structures, local variables, and global variables.

## 8.1 Default Naming Rules for Variables

Variables names follow Java naming conventions. Examples:

- `lNumberOfPassengers`
- `lSeatAvailability`

## 8.2 Default Naming Rules for Functions

Function names follow Java naming conventions. Example:

- `int myFunctionName (const int& a, int b)`

## 8.3 Default Naming Rules for Classes and Structures

Each new word in a class or structure name should always start with a capital letter and the words should be separated with an under-score. Abbreviations are written with capital letters. Examples:

- `MyClassName`
- `MyStructName`

## 8.4 Default Naming Rules for Files

Files are named after the C++ class names.

Source files are named using `.cpp` suffix, whereas header files end with `.hpp` extension. Examples:

- `FlightDate.hpp`
- `SegmentDate.cpp`

## 8.5 Default Functionality of Classes

All classes that are configured by input parameters should include:

- default empty constructor
- one or more additional constructor(s) that takes input parameters and initializes the class instance
- setup function, preferably named `'setup'` or `'set_parameters'`

Explicit destructor functions are not required, unless they are needed. It shall not be possible to use any of the other member functions unless the class has been properly initiated with the input parameters.

## 9 Copyright and License

### 9.1 GNU LESSER GENERAL PUBLIC LICENSE

#### 9.1.1 Version 2.1, February 1999

Copyright (C) 1991, 1999 Free Software Foundation, Inc.  
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA

Everyone is permitted to copy and distribute verbatim copies  
of this license document, but changing it is not allowed.

[This is the first released version of the Lesser GPL. It also counts  
as the successor of the GNU Library Public License, version 2, hence  
the version number 2.1.]

### 9.2 Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public Licenses are intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users.

This license, the Lesser General Public License, applies to some specially designated software packages--typically libraries--of the Free Software Foundation and other authors who decide to use it. You can use it too, but we suggest you first think carefully about whether this license or the ordinary General Public License is the better strategy to use in any particular case, based on the explanations below.

When we speak of free software, we are referring to freedom of use, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish); that you receive source code or can get it if you want it; that you can change the software and use pieces of it in new free programs; and that you are informed that you can do these things.

To protect your rights, we need to make restrictions that forbid distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal permission to copy, distribute and/or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.

Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to

permit linking those libraries into non-free programs.

When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a combined work, a derivative of the original library. The ordinary General Public License therefore permits such linking only if the entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.

We call this license the "Lesser" General Public License because it does Less to protect the user's freedom than the ordinary General Public License. It also provides other free software developers Less of an advantage over competing non-free programs. These disadvantages are the reason we use the ordinary General Public License for many libraries. However, the Lesser license provides advantages in certain special circumstances.

For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de-facto standard. To achieve this, non-free programs must be allowed to use the library. A more frequent case is that a free library does the same job as widely used non-free libraries. In this case, there is little to gain by limiting the free library to free software only, so we use the Lesser General Public License.

In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of free software. For example, permission to use the GNU C Library in non-free programs enables many more people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.

Although the Lesser General Public License is Less protective of the users' freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The former contains code derived from the library, whereas the latter must be combined with the library in order to run.

### **9.3 TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION**

0. This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called "this License"). Each licensee is addressed as "you".

A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The "Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term "modification".)

"Source code" for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library's complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) The modified work must itself be a software library.

b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.

c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.

d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also combine or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

- a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)
- b) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library already present on the user's computer system, rather than copying library functions into the executable, and (2) will operate properly with a modified version of the library, if the user installs one, as long as the modified version is interface-compatible with the version that the work was made with.
- c) Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.
- d) If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.
- e) Verify that the user has already received a copy of these materials or that you have already sent this user a copy.

For an executable, the required form of the "work that uses the Library" must include any data and utility

programs needed for reproducing the executable from it. However, as a special exception, the materials to be distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

7. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:

a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.

b) Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.

11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by

copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

### 9.3.1 NO WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

### 9.3.2 END OF TERMS AND CONDITIONS

## 9.4 How to Apply These Terms to Your New Programs

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

```
<one line to give the library's name and a brief idea of what it does.>
```

```
Copyright (C) <year> <name of author>
```

```
This library is free software; you can redistribute it and/or
modify it under the terms of the GNU Lesser General Public
License as published by the Free Software Foundation; either
version 2.1 of the License, or (at your option) any later version.
```

```
This library is distributed in the hope that it will be useful,
but WITHOUT ANY WARRANTY; without even the implied warranty of
MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU
Lesser General Public License for more details.
```

```
You should have received a copy of the GNU Lesser General Public
License along with this library; if not, write to the Free Software
Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA
```

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the library, if necessary. Here is a sample; alter the names:

```
Yoyodyne, Inc., hereby disclaims all copyright interest in the
library 'Frob' (a library for tweaking knobs) written by James Random Hacker.

<signature of Ty Coon>, 1 April 1990
Ty Coon, President of Vice
```

That's all there is to it!

## 10 Documentation Rules

### 10.1 General Rules

All classes in StdAir should be properly documented with Doxygen comments in include (.hpp) files. Source (.cpp) files should be documented according to a normal standard for well documented C++ code.

An example of how the interface of a class shall be documented in StdAir is shown here:

```
/*!
 * \brief Brief description of MyClass here
 *
 * Detailed description of MyClass here. With example code if needed.
 */
class MyClass {
public:
    /*! Default constructor
     * MyClass(void) { setup_done = false; }
     */

    /*!
     * \brief Constructor that initializes the class with parameters
     *
     * Detailed description of the constructor here if needed
     *
     * \param[in] param1 Description of \a param1 here
     * \param[in] param2 Description of \a param2 here
     */
    MyClass(TYPE1 param1, TYPE2 param2) { setup(param1, param2); }

    /*!
```

```

    * \brief Setup function for MyClass
    *
    * Detailed description of the setup function here if needed
    *
    * \param[in] param1 Description of \a param1 here
    * \param[in] param2 Description of \a param2 here
    */
void setup(TYPE1 param1, TYPE2 param2);

/*!
 * \brief Brief description of memberFunction1
 *
 * Detailed description of memberFunction1 here if needed
 *
 * \param[in]      param1 Description of \a param1 here
 * \param[in]      param2 Description of \a param2 here
 * \param[in,out] param3 Description of \a param3 here
 * \return Description of the return value here
 */
TYPE4 memberFunction1(TYPE1 param1, TYPE2 param2, TYPE3 &param3);

private:

    bool _setupDone;          /*!< Variable that checks if the class is properly
                               initialized with parameters */
    TYPE1 _privateVariable1; /*!< Short description of _privateVariable1 here
    TYPE2 _privateVariable2; /*!< Short description of _privateVariable2 here
};

```

## 10.2 File Header

All files should start with the following header, which include Doxygen's `\file`, `\brief` and `\author` tags, `$Date$` and `$Revisions$` CVS tags, and a common copyright note:

```

/*!
 * \file
 * \brief Brief description of the file here
 * \author Names of the authors who contributed to this code
 * \date Date
 *
 * Detailed description of the file here if needed.
 *
 * -----
 *
 * StdAir - C++ Standard Airline IT Object Library
 *
 * Copyright (C) 2009-2010 (\see authors file for a list of contributors)
 *
 * \see copyright file for license information
 *
 * -----
 */

```

## 10.3 Grouping Various Parts

All functions must be added to a Doxygen group in order to appear in the documentation. The following code example defines the group `'my_group'`:

```

/*!
 * \defgroup my_group Brief description of the group here
 *
 * Detailed description of the group here

```

```
*/
```

The following example shows how to document the function `myFunction` and how to add it to the group `my_group`:

```
/*!
 * \brief Brief description of myFunction here
 * \ingroup my_group
 *
 * Detailed description of myFunction here
 *
 * \param[in] param1 Description of \a param1 here
 * \param[in] param2 Description of \a param2 here
 * \return Description of the return value here
 */
TYPE3 myFunction(TYPE1 param1, TYPE2 &param2);
```

## 11 Main features

A short list of the main features of `StdAir` is given below sorted in different categories. Many more features and functions exist and for these we refer to the reference documentation.

### 11.1 Standard Airline IT Business Object Model (BOM)

- (Airline) Network-related classes:
  - Network, ReachableUniverse
- (Air) Travel-related classes:
  - TravelSolution, OriginDestination,
- (Airline) Inventory-related classes:
  - Inventory, FlightDate, SegmentDate, SegmentCabin, BookingClass, LegDate, LegCabin, Bucket
- (Airline) Schedule-related classes:
  - FlightPeriod, SegmentPeriod, LegPeriod
- (Simulated) Passenger-related demand classes:
  - DemandStream, BookingRequest
- (Air) Price-related classes:
  - YieldStore

### 11.2 Architecture of the `StdAir` library

- Separate structure and content classes
- `Boost.Fusion`

## 12 Make a Difference

**Do not ask what StdAir can do for you. Ask what you can do for StdAir.**

You can help us to develop the StdAir library. There are always a lot of things you can do:

- Start using StdAir
- Tell your friends about StdAir and help them to get started using it
- If you find a bug, report it to us (on the [dedicated Sourceforge's Trac Web site](#)). Without your help we can never hope to produce a bug free code.
- Help us to improve the documentation by providing information about documentation bugs
- Answer support requests in the StdAir [discussion forums](#) on SourceForge. If you know the answer to a question, help others to overcome their StdAir problems.
- Help us to improve our algorithms. If you know of a better way (e.g., that is faster or requires less memory) to implement some of our algorithms, then let us know.
- Help to port StdAir to new platforms. If you manage to compile StdAir on a new platform, then tell how you did it.
- Send your code. If you have a good StdAir compatible code, which you can release under the LGPL, and you think it should be included in StdAir, then send it to the community.
- Become an StdAir developer. Send us (see the [People](#) page) an e-mail and tell what you can do for StdAir.

## 13 Make a new release

### 13.1 Introduction

This document describes briefly the recommended procedure of releasing a new version of StdAir using a Linux development machine and the SourceForge project site.

The following steps are required to make a release of the distribution package.

### 13.2 Initialisation

Clone locally the full [Git project](#):

```
cd ~
mkdir -p dev/sim
cd ~/dev/sim
git clone git://stdair.git.sourceforge.net/gitroot/stdair/stdair stdairgit
cd stdairgit
git checkout trunk
```

### 13.3 Branch creation

Create the branch, on your local clone, corresponding to the new release (say, 0.5.0):

```
cd ~/dev/sim/stdairgit
git checkout trunk
git checkout -b 0.5.0
```

Update the version in the various build system files, replacing 99.99.99 by the correct version number:

```
vi CMakeLists.txt
vi autogen.sh
```

Update the version and add a change-log in the ChangeLog and in the RPM specification files:

```
vi ChangeLog
vi stdair.spec
```

## 13.4 Commit and publish the release branch

Commit the new release:

```
cd ~/dev/sim/stdairgit
git add -A
git commit -m "[Release 0.5.0] Release of version 0.5.0."
git push
```

## 13.5 Update the change-log in the trunk as well

Update the change-log in the ChangeLog and RPM specification files:

```
cd ~/dev/sim/stdairgit
git checkout trunk
vi ChangeLog
vi stdair.spec
```

Commit the change-logs and publish the trunk (main development branch):

```
git commit -m "[Doc] Integrated the change-log of the release 0.5.0."
git push
```

## 13.6 Create distribution packages

Create the distribution packages using the following command:

```
cd ~/dev/sim/stdairgit
git checkout 0.5.0
rm -rf build && mkdir -p build
cd build
cmake -DCMAKE_INSTALL_PREFIX=/home/user/dev/deliveries/stdair-0.5.0 \
      -DCMAKE_BUILD_TYPE:String=Debug -DINSTALL_DOC:BOOL=ON ..
make check && make dist
```

This will configure, compile and check the package. The output packages will be named, for instance, `stdair-0.5.0.tar.gz` and `stdair-0.5.0.tar.bz2`.

## 13.7 Generation the RPM packages

Optionally, generate the RPM package (for instance, for [Fedora/RedHat](#)):

```
cd ~/dev/sim/stdairgit
git checkout 0.5.0
rm -rf build && mkdir -p build
cd build
cmake -DCMAKE_INSTALL_PREFIX=/home/user/dev/deliveries/stdair-99.99.99 \
      -DCMAKE_BUILD_TYPE:STRING=Debug -DINSTALL_DOC:BOOL=ON ..
make dist
```

To perform this step, rpm-build, rpmlint and rpmdevtools have to be available on the system.

```
cp stdair.spec ~/dev/packages/SPECS \
  && cp stdair-0.5.0.tar.bz2 ~/dev/packages/SOURCES
cd ~/dev/packages/SPECS
rpmbuild -ba stdair.spec
rpmlint -i ../SPECS/stdair.spec ../SRPMS/stdair-0.5.0-1.fc15.src.rpm \
  ../RPMS/noarch/stdair-* ../RPMS/i686/stdair-*
```

## 13.8 Update distributed change log

Update the NEWS and ChangeLog files with appropriate information, including what has changed since the previous release. Then commit and push the changes into the [StdAir's Git repository](#).

## 13.9 Create the binary package, including the documentation

Create the binary package, which includes HTML and PDF documentation, using the following command:

```
make package
```

The output binary package will be named, for instance, `stdair-0.5.0-Linux.tar.bz2`. That package contains both the HTML and PDF documentation. The binary package contains also the executables and shared libraries, as well as C++ header files, but all of those do not interest us for now.

## 13.10 Upload the files to SourceForge

Upload the distribution and documentation packages to the SourceForge server. Check [SourceForge help page on uploading software](#).

## 13.11 Upload the documentation to SourceForge

In order to update the Web site files, either:

- [synchronise them with rsync and SSH](#):

```
cd ~/dev/sim/stdairgit
git checkout 0.5.0
rsync -aiv doc/html/ doc/latex/refman.pdf joe,stdair@web.sourceforge.net:htdocs/
```

where `-aiv` options mean:

- `-a`: archive/mirror mode; equals `-rlptgoD` (no `-H`, `-A`, `-X`)
- `-v`: increase verbosity
- `-i`: output a change-summary for all updates

- Note the trailing slashes (/) at the end of both the source and target directories. It means that the content of the source directory (`doc/html`), rather than the directory itself, has to be copied into the content of the target directory.
- or use the [SourceForge Shell service](#).

## 13.12 Make a new post

- submit a new entry in the [SourceForge project-related news feed](#)
- make a new post on the [SourceForge hosted WordPress blog](#)
- and update, if necessary, [Trac tickets](#).

## 13.13 Send an email on the announcement mailing-list

Finally, you should send an announcement to [stdair-announce@lists.sourceforge.net](mailto:stdair-announce@lists.sourceforge.net) (see <https://lists.sourceforge.net/lists/listinfo/stdair-announce> for the archives)

# 14 Installation

## 14.1 Table of Contents

- [Fedora/RedHat Linux distributions](#)
- [StdAir Requirements](#)
- [Basic Installation](#)
- [Compilers and Options](#)
- [Compiling For Multiple Architectures](#)
- [Installation Names](#)
- [Optional Features](#)
- [Particular systems](#)
- [Specifying the System Type](#)
- [Sharing Defaults](#)
- [Defining Variables](#)
- [‘cmake’ Invocation](#)

## 14.2 Fedora/RedHat Linux distributions

Note that on [Fedora/RedHat](#) Linux distributions, RPM packages are available and can be installed with your usual package manager. For instance:

```
yum -y install stdair-devel stdair-doc
```

RPM packages can also be available on the [SourceForge download site](#).

## 14.3 StdAir Requirements

StdAir should compile without errors or warnings on most GNU/Linux systems, on UNIX systems like Solaris SunOS, and on POSIX based environments for Microsoft Windows like Cygwin or MinGW with MSYS. It can be also built on Microsoft Windows NT/2000/XP/Vista/7 using Microsoft's Visual C++ .NET, but our support for this compiler is limited. For GNU/Linux, SunOS, Cygwin and MinGW we assume that you have at least the following GNU software installed on your computer:

- GNU Autotools:
  - `autoconf`,
  - `automake`,
  - `libtool`,
  - `make`, version 3.72.1 or later (check version with `'make --version'`)
- `GCC` - GNU C++ Compiler (g++), version 4.3.x or later (check version with `'gcc --version'`)
- `Boost` - C++ STL extensions, version 1.35 or later (check version with `'grep "define BOOST_LIB_VERSION" /usr/include/boost/version.hpp'`)
- `MySQL` - Database client libraries, version 5.0 or later (check version with `'mysql --version'`)
- `SOCI` - C++ database client library wrapper, version 3.0.0 or later (check version with `'soci-config --version'`)

Optionally, you might need a few additional programs: `Doxygen`, `LaTeX`, `Dvips` and `Ghostscript`, to generate the HTML and PDF documentation.

We strongly recommend that you use recent stable releases of the GCC, if possible. We do not actively work on supporting older versions of the GCC, and they may therefore (without prior notice) become unsupported in future releases of StdAir.

## 14.4 Basic Installation

Briefly, the shell commands `./cmake .. && make install` should configure, build and install this package. The following more-detailed instructions are generic; see the `'README'` file for instructions specific to this package. Some packages provide this `'INSTALL'` file but do not implement all of the features documented below. The lack of an optional feature in a given package is not necessarily a bug. More recommendations for GNU packages can be found in the info page corresponding to "Makefile Conventions: (standards)Makefile Conventions".

The `'cmake'` shell script attempts to guess correct values for various system-dependent variables used during compilation. It uses those values to create a `'Makefile'` in each directory of the package. It may also create one or more `'.h'` files containing system-dependent definitions. Finally, it creates a `'CMakeCache.txt'` cache file that you can refer to in the future to recreate the current configuration, and files `'CMakeFiles'` containing compiler output (useful mainly for debugging `'cmake'`).

It can also use an optional file (typically called `'config.cache'` and enabled with `'--cache-file=config.cache'` or simply `'-C'`) that saves the results of its tests to speed up reconfiguring. Caching is disabled by default to prevent problems with accidental use of stale cache files.

If you need to do unusual things to compile the package, please try to figure out how `'configure'` could check whether to do them, and mail diffs or instructions to the address given in the `'README'` so they can be considered for the next release. If you are using the cache, and at some point `'config.cache'` contains results you don't want to keep, you may remove or edit it.

The file `'CMakeLists.txt'` is used to create the `'Makefile'` files.

The simplest way to compile this package is:

1. `'cd'` to the directory containing the package's source code and type `'./cmake .'` to configure the package for your system. Running `'cmake'` is generally fast. While running, it prints some messages telling which features it is checking for.
2. Type `'make'` to compile the package.
3. Optionally, type `'make check'` to run any self-tests that come with the package, generally using the just-built uninstalled binaries.
4. Type `'make install'` to install the programs and any data files and documentation. When installing into a prefix owned by root, it is recommended that the package be configured and built as a regular user, and only the `'make install'` phase executed with root privileges.
5. You can remove the program binaries and object files from the source code directory by typing `'make clean'`. To also remove the files that `'configure'` created (so you can compile the package for a different kind of computer), type `'make distclean'`. There is also a `'make maintainer-clean'` target, but that is intended mainly for the package's developers. If you use it, you may have to get all sorts of other programs in order to regenerate files that came with the distribution.
6. Often, you can also type `'make uninstall'` to remove the installed files again. In practice, not all packages have tested that uninstallation works correctly, even though it is required by the GNU Coding Standards.

## 14.5 Compilers and Options

Some systems require unusual options for compilation or linking that the `'cmake'` script does not know about. Run `'./cmake --help'` for details on some of the pertinent environment variables.

You can give `'cmake'` initial values for configuration parameters by setting variables in the command line or in the environment. Here is an example:

```
./cmake CC=c99 CFLAGS=-g LIBS=-lposix
```

**See also:**

[Defining Variables](#) for more details.

## 14.6 Compiling For Multiple Architectures

You can compile the package for more than one kind of computer at the same time, by placing the object files for each architecture in their own directory. To do this, you can use GNU `'make'`. `'cd'` to the directory where you want the object files and executables to go and

run the 'configure' script. 'configure' automatically checks for the source code in the directory that 'configure' is in and in '..'. This is known as a "VPATH" build.

With a non-GNU 'make', it is safer to compile the package for one architecture at a time in the source code directory. After you have installed the package for one architecture, use 'make distclean' before reconfiguring for another architecture.

On MacOS X 10.5 and later systems, you can create libraries and executables that work on multiple system types--known as "fat" or "universal" binaries--by specifying multiple '-arch' options to the compiler but only a single '-arch' option to the preprocessor. Like this:

```
./configure CC="gcc -arch i386 -arch x86_64 -arch ppc -arch ppc64" \
           CXX="g++ -arch i386 -arch x86_64 -arch ppc -arch ppc64" \
           CPP="gcc -E" CXXCPP="g++ -E"
```

This is not guaranteed to produce working output in all cases, you may have to build one architecture at a time and combine the results using the 'lipo' tool if you have problems.

## 14.7 Installation Names

By default, 'make install' installs the package's commands under '/usr/local/bin', include files under '/usr/local/include', etc. You can specify an installation prefix other than '/usr/local' by giving 'configure' the option '--prefix=PREFIX', where PREFIX must be an absolute file name.

You can specify separate installation prefixes for architecture-specific files and architecture-independent files. If you pass the option '--exec-prefix=PREFIX' to 'configure', the package uses PREFIX as the prefix for installing programs and libraries. Documentation and other data files still use the regular prefix.

In addition, if you use an unusual directory layout you can give options like '--bindir=DIR' to specify different values for particular kinds of files. Run 'configure --help' for a list of the directories you can set and what kinds of files go in them. In general, the default for these options is expressed in terms of '\${prefix}', so that specifying just '--prefix' will affect all of the other directory specifications that were not explicitly provided.

The most portable way to affect installation locations is to pass the correct locations to 'configure'; however, many packages provide one or both of the following shortcuts of passing variable assignments to the 'make install' command line to change installation locations without having to reconfigure or recompile.

The first method involves providing an override variable for each affected directory. For example, 'make install prefix=/alternate/directory' will choose an alternate location for all directory configuration variables that were expressed in terms of '\${prefix}'. Any directories that were specified during 'configure',

but not in terms of `'${prefix}'`, must each be overridden at install time for the entire installation to be relocated. The approach of makefile variable overrides for each directory variable is required by the GNU Coding Standards, and ideally causes no recompilation. However, some platforms have known limitations with the semantics of shared libraries that end up requiring recompilation when using this method, particularly noticeable in packages that use GNU Libtool.

The second method involves providing the `'DESTDIR'` variable. For example, `'make install DESTDIR=/alternate/directory'` will prepend `'/alternate/directory'` before all installation names. The approach of `'DESTDIR'` overrides is not required by the GNU Coding Standards, and does not work on platforms that have drive letters. On the other hand, it does better at avoiding recompilation issues, and works well even when some directory options were not specified in terms of `'${prefix}'` at `'configure'` time.

## 14.8 Optional Features

If the package supports it, you can cause programs to be installed with an extra prefix or suffix on their names by giving `'cmake'` the option `'--program-prefix=PREFIX'` or `'--program-suffix=SUFFIX'`.

Some packages pay attention to `'--enable-FEATURE'` options to `'configure'`, where `FEATURE` indicates an optional part of the package. They may also pay attention to `'--with-PACKAGE'` options, where `PACKAGE` is something like `'gnu-as'` or `'x'` (for the X Window System). The `'README'` should mention any `'--enable-'` and `'--with-'` options that the package recognizes.

For packages that use the X Window System, `'configure'` can usually find the X include and library files automatically, but if it doesn't, you can use the `'configure'` options `'--x-includes=DIR'` and `'--x-libraries=DIR'` to specify their locations.

Some packages offer the ability to configure how verbose the execution of `'make'` will be. For these packages, running `'./configure --enable-silent-rules'` sets the default to minimal output, which can be overridden with `'make V=1'`; while running `'./configure --disable-silent-rules'` sets the default to verbose, which can be overridden with `'make V=0'`.

## 14.9 Particular systems

On HP-UX, the default C compiler is not ANSI C compatible. If GNU CC is not installed, it is recommended to use the following options in order to use an ANSI C compiler:

```
./configure CC="cc -Ae -D_XOPEN_SOURCE=500"
```

and if that doesn't work, install pre-built binaries of GCC for HP-UX.

On OSF/1 a.k.a. Tru64, some versions of the default C compiler cannot parse its `'<wchar.h>'` header file. The option `'-nodtk'` can be used as

a workaround. If GNU CC is not installed, it is therefore recommended to try

```
./configure CC="cc"
```

and if that doesn't work, try

```
./configure CC="cc -nodtk"
```

On Solaris, don't put `/usr/ucb` early in your `PATH`. This directory contains several dysfunctional programs; working variants of these programs are available in `/usr/bin`. So, if you need `/usr/ucb` in your `PATH`, put it `_after_` `/usr/bin`.

On Haiku, software installed for all users goes in `/boot/common`, not `/usr/local`. It is recommended to use the following options:

```
./cmake -DCMAKE_INSTALL_PREFIX=/boot/common
```

## 14.10 Specifying the System Type

There may be some features `'configure'` cannot figure out automatically, but needs to determine by the type of machine the package will run on. Usually, assuming the package is built to be run on the `_same_` architectures, `'configure'` can figure that out, but if it prints a message saying it cannot guess the machine type, give it the `'--build=TYPE'` option. TYPE can either be a short name for the system type, such as `'sun4'`, or a canonical name which has the form CPU-COMPANY-SYSTEM

where SYSTEM can have one of these forms:

- OS
- KERNEL-OS

See the file `'config.sub'` for the possible values of each field. If `'config.sub'` isn't included in this package, then this package doesn't need to know the machine type.

If you are `_building_` compiler tools for cross-compiling, you should use the option `'--target=TYPE'` to select the type of system they will produce code for.

If you want to `_use_` a cross compiler, that generates code for a platform different from the build platform, you should specify the `"host"` platform (i.e., that on which the generated programs will eventually be run) with `'--host=TYPE'`.

## 14.11 Sharing Defaults

If you want to set default values for `'configure'` scripts to share, you can create a site shell script called `'config.site'` that gives

default values for variables like `'CC'`, `'cache_file'`, and `'prefix'`. `'configure'` looks for `'PREFIX/share/config.site'` if it exists, then `'PREFIX/etc/config.site'` if it exists. Or, you can set the `'CONFIG_SITE'` environment variable to the location of the site script. A warning: not all `'configure'` scripts look for a site script.

## 14.12 Defining Variables

Variables not defined in a site shell script can be set in the environment passed to `'configure'`. However, some packages may run `'configure'` again during the build, and the customized values of these variables may be lost. In order to avoid this problem, you should set them in the `'configure'` command line, using `'VAR=value'`. For example:

```
./configure CC=/usr/local2/bin/gcc
```

causes the specified `'gcc'` to be used as the C compiler (unless it is overridden in the site shell script).

Unfortunately, this technique does not work for `'CONFIG_SHELL'` due to an Autoconf bug. Until the bug is fixed you can use this workaround:

```
CONFIG_SHELL=/bin/bash /bin/bash ./configure CONFIG_SHELL=/bin/bash
```

## 14.13 'cmake' Invocation

`'cmake'` recognizes the following options to control how it operates.

- `'--help'`, `'-h'` print a summary of all of the options to `'configure'`, and exit.
- `'--help=short'`, `'--help=recursive'` print a summary of the options unique to this package's `'configure'`, and exit. The `'short'` variant lists options used only in the top level, while the `'recursive'` variant lists options also present in any nested packages.
- `'--version'`, `'-V'` print the version of Autoconf used to generate the `'configure'` script, and exit.
- `'--cache-file=FILE'` enable the cache: use and save the results of the tests in `FILE`, traditionally `'config.cache'`. `FILE` defaults to `'/dev/null'` to disable caching.
- `'--config-cache'`, `'-C'` alias for `'--cache-file=config.cache'`.
- `'--quiet'`, `'--silent'`, `'-q'` do not print messages saying which checks are being made. To suppress all normal output, redirect it to `'/dev/null'` (any error messages will still be shown).
- `'--srcdir=DIR'` look for the package's source code in directory `DIR`. Usually `'configure'` can determine that directory automatically.
- `'--prefix=DIR'` use `DIR` as the installation prefix.

**See also:**

[Installation Names](#) for more details, including other options available for fine-tuning the installation locations.

- '--no-create', '-n' run the configure checks, but stop before creating any output files.

'cmake' also accepts some other, not widely useful, options. Run 'cmake --help' for more details.

The 'cmake' script produces an output like this:

```
cmake -DCMAKE_INSTALL_PREFIX=/home/user/dev/deliveries/stdair-0.50.0 \
-DLIB_SUFFIX=64 -DCMAKE_BUILD_TYPE:String=Debug -DINSTALL_DOC:BOOL=ON ..

It is recommended that you check if your library has been compiled and linked properly and works as expected. To do so, you should execute the testing process 'make check'. As a result, you should obtain a similar report:

```
[ 0%] Built target hdr_cfg_stdair
[ 97%] Built target stdairlib
[100%] Built target StdAirTesttst
Scanning dependencies of target check_stdairtst
Test project /home/user/dev/sim/stdair/stdairgithub/build/test/stdair
  Start 1: StdAirTesttst
1/1 Test #1: StdAirTesttst ..... Passed    0.02 sec

100% tests passed, 0 tests failed out of 1

Total Test time (real) = 0.27 sec
[100%] Built target check_stdairtst
Scanning dependencies of target check
[100%] Built target check
```

Check if all the executed tests PASSED. If not, please contact us by filling a [bug-report](#).

Finally, you should install the compiled and linked library, include files and (optionally) HTML and PDF documentation by typing:

```
make install
```

Depending on the PREFIX settings during configuration, you might need the root (administrator) access to perform this step.

Eventually, you might invoke the following command

```
make clean
```

to remove all files created during compilation process, or even

```
cd ~/dev/sim/stdairgit
rm -rf build && mkdir build
cd build
```

to remove everything.

## 15 Linking with StdAir

### 15.1 Table of Contents

- [Introduction](#)
- [Using the pkg-config command](#)
- [Using the stdair-config script](#)
- [M4 macro for the GNU Autotools](#)
- [Using StdAir with dynamic linking](#)

### 15.2 Introduction

There are two convenient methods of linking your programs with the StdAir library. The first one employs the 'pkg-config' command (see <http://pkgconfig.freedesktop.org/>), whereas the second one uses 'stdair-config' script. These methods are shortly described below.

### 15.3 Using the pkg-config command

'pkg-config' is a helper tool used when compiling applications and libraries. It helps you insert the correct compiler and linker options. The syntax of the 'pkg-config' is as follows:

```
pkg-config <options> <library_name>
```

For instance, assuming that you need to compile an StdAir based program 'my\_prog.cpp', you should use the following command:

```
g++ `pkg-config --cflags stdair` -o my_prog my_prog.cpp \
`pkg-config --libs stdair`
```

For more information see the 'pkg-config' man pages.

## 15.4 Using the stdair-config script

StdAir provides a shell script called `'stdair-config'`, which is installed by default in `'$prefix/bin'` (`'/usr/local/bin'`) directory. It can be used to simplify compilation and linking of StdAir based programs. The usage of this script is quite similar to the usage of the `'pkg-config'` command.

Assuming that you need to compile the program `'my_prog.cpp'` you can now do that with the following command:

```
g++ 'stdair-config --cflags' -o my_prog my_prog.cpp 'stdair-config --libs'
```

A list of `'stdair-config'` options can be obtained by typing:

```
stdair-config --help
```

If the `'stdair-config'` command is not found by your shell, you should add its location `'$prefix/bin'` to the `PATH` environment variable, e.g.:

```
export PATH=/usr/local/bin:$PATH
```

## 15.5 M4 macro for the GNU Autotools

A M4 macro file is delivered with StdAir, namely `'stdair.m4'`, which can be found in, e.g., `'/usr/share/aclocal'`. When used by a `'configure'` script, thanks to the `'AM_PATH_STDAIR'` macro (specified in the M4 macro file), the following Makefile variables are then defined:

- `'STDAIR_VERSION'` (e.g., defined to 0.2.0)
- `'STDAIR_CFLAGS'` (e.g., defined to `'-I${prefix}/include'`)
- `'STDAIR_LIBS'` (e.g., defined to `'-L${prefix}/lib -lstdair'`)

## 15.6 Using StdAir with dynamic linking

When using static linking some of the library routines in StdAir are copied into your executable program. This can lead to unnecessary large executables. To avoid having too large executable files you may use dynamic linking instead. Dynamic linking means that the actual linking is performed when the program is executed. This requires that the system is able to locate the shared StdAir library file during your program execution. If you install the StdAir library using a non-standard prefix, the `'LD_LIBRARY_PATH'` environment variable might be used to inform the linker of the dynamic library location, e.g.:

```
export LD_LIBRARY_PATH=<StdAir installation prefix>/lib:$LD_LIBRARY_PATH
```

## 16 Test Rules

This section describes how the functionality of the StdAir library should be verified. In the `'test/stdair'` subdirectory, test source files are provided. All functionality should be tested using these test source files.

## 16.1 The Test Source Files

Each new StdAir module/class should be accompanied with a test source file. The test source file is an implementation in C++ that tests the functionality of a function/class or a group of functions/classes called test suites. The test source file should test relevant parameter settings and input/output relations to guarantee correct functionality of the corresponding classes/functions. The test source files should be maintained using version control and updated whenever new functionality is added to the StdAir library.

The test source file should print relevant data to a standard output that can be used to verify the functionality. All relevant parameter settings should be tested.

The test source file should be placed in the `'test/stdair'` subdirectory and should have a name ending with `'TestSuite.cpp'`.

## 16.2 The Reference File

Consider a test source file named `'YieldTestSuite.cpp'`. A reference file named `'YieldTestSuite.ref'` should accompany the test source file. The reference file contains a reference printout of the standard output generated when running the test program. The reference file should be maintained using version control and updated according to the test source file.

## 16.3 Testing StdAir Library

One can compile and execute all test programs from the `'test/stdair'` sub-directory by typing:

```
% make check
```

after successful compilation of the StdAir library.

## 17.2 Introduction

The `StdAir` library contains classes for airline business management. This document does not cover all the aspects of the `StdAir` library. It does however explain the most important things you need to know in order to start using `StdAir`.

## 17.3 Get Started

### 17.3.1 Get the StdAir library

### 17.3.2 Build the StdAir project

To run the configuration script the first time, go to the top directory (where the `StdAir` package has been un-packed), and issue either of the following two commands, depending on whether the `StdAir` project has been checked out from the Subversion repository or downloaded as a tar-ball package from the Sourceforge Web site:

- `./autogen.sh`
- `./configure`

### 17.3.3 Build and Run the Tests

### 17.3.4 Install the StdAir Project (Binaries, Documentation)

## 17.4 Exploring the Predefined BOM Tree

`StdAir` predefines a BOM (Business Object Model) tree specific to the airline IT arena.

### 17.4.1 Airline Distribution BOM Tree

- `stdair::TravelSolutionStruct`

### 17.4.2 Airline Network BOM Tree

- `stdair::FlightPeriod`

### 17.4.3 Airline Inventory BOM Tree

- `stdair::Inventory`
- `stdair::FlightDate`

#### 17.4.3.1 Airline Inventory Marketing BOM Tree

- `stdair::SegmentDate`
- `stdair::SegmentCabin`
- `stdair::FareFamily`
- `stdair::BookingClass`

### 17.4.3.2 Airline Inventory Operating BOM Tree

- [stdair::LegDate](#)
- [stdair::LegCabin](#)
- [stdair::Bucket](#)

## 17.5 Extending the BOM Tree

## 18.2 Introduction

This page is intended to provide a list of StdAir supported systems, i.e. the systems on which configuration, installation and testing process of the StdAir library has been successful. Results are grouped based on minor release number. Therefore, only the latest tests for bug-fix releases are included. Besides, the information on this page is divided into sections dependent on the operating system.

Where necessary, some extra information is given for each tested configuration, e.g. external libraries installed, configuration commands used, etc.

If you manage to compile, install and test the StdAir library on a system not mentioned below, please let us know, so we could update this database.

## 18.3 StdAir 3.10.x

### 18.3.1 Linux Systems

#### 18.3.1.1 Fedora Core 4 with ATLAS

- **Platform:** Intel Pentium 4
- **Operating System:** Fedora Core 4 (x86)
- **Compiler:** g++ (GCC) 4.0.2 20051125
- **StdAir release:** 3.10.0
- **External Libraries:** From FC4 distribution:
  - `fftw3.i386-3.0.1-3`
  - `fftw3-devel.i386-3.0.1-3`
  - `atlas-sse2.i386-3.6.0-8.fc4`
  - `atlas-sse2-devel.i386-3.6.0-8.fc4`
  - `blas.i386-3.0-35.fc4`
  - `lapack.i386-3.0-35.fc4`
- **Tests Status:** All tests PASSED
- **Comments:** StdAir configured with:

```
% CXXFLAGS="-O3 -pipe -march=pentium4" ./configure
```
- **Date:** March 7, 2006
- **Tester:** Tony Ottosson

#### 18.3.1.2 Gentoo Linux with ACML

- **Platform:** AMD Sempron 3000+
- **Operating System:** Gentoo Linux 2006.0 (x86 arch)
- **Compiler(s):** g++ (GCC) 3.4.5
- **StdAir release:** 3.10.1
- **External Libraries:** Compiled and installed from portage tree:
  - `sci-libs/acml-3.0.0`
- **Tests Status:** All tests PASSED
- **Comments:** BLAS and LAPACK libs set by using the following system commands:

```
% eselect blas set ACML
% eselect lapack set ACML
```

StdAir configured with:

```
% export CPPFLAGS="-I/usr/include/acml"
% ./configure --with-blas="-lblas"
```

- **Date:** March 31, 2006
- **Tester:** Adam Piatyszek (ediap)

#### 18.3.1.3 Gentoo Linux with ATLAS

- **Platform:** Intel Pentium M Centrino
- **Operating System:** Gentoo Linux 2006.0 (x86)
- **Compiler:** g++ (GCC) 3.4.5
- **StdAir release:** 3.10.1
- **External Libraries:** Compiled and installed from portage tree:
  - sci-libs/fftw-3.1
  - sci-libs/blas-atlas-3.6.0-r1
  - sci-libs/lapack-atlas-3.6.0
- **Tests Status:** All tests PASSED
- **Comments:** BLAS and LAPACK libs set by using the following system commands:

```
% eselect blas set ATLAS
% eselect lapack set ATLAS
```

StdAir configured with:

```
% ./configure --with-blas="-lblas"
```

- **Date:** March 31, 2006
- **Tester:** Adam Piatyszek (ediap)

#### 18.3.1.4 Gentoo Linux with MKL

- **Platform:** Intel Pentium M Centrino
- **Operating System:** Gentoo Linux 2006.0 (x86 arch)
- **Compiler:** g++ (GCC) 3.4.5
- **StdAir release:** 3.10.0
- **External Libraries:** Intel Math Kernel Library (MKL) 8.0.1 installed manually in the following directory: /opt/intel/mkl/8.0.1
- **Tests Status:** All tests PASSED

- **Comments:** StdAir configured using the following commands:

```
% export LDFLAGS="-L/opt/intel/mkl/8.0.1/lib/32"
% export CPPFLAGS="-I/opt/intel/mkl/8.0.1/include"
% ./configure
```

- **Date:** February 28, 2006
- **Tester:** Adam Piatyszek (ediap)

#### 18.3.1.5 Gentoo Linux with NetLib's BLAS and LAPACK

- **Platform:** Intel Pentium M Centrino
- **Operating System:** Gentoo Linux 2006.0 (x86)
- **Compiler:** g++ (GCC) 3.4.5
- **StdAir release:** 3.10.1
- **External Libraries:** Compiled and installed from portage tree:

```
- sci-libs/fftw-3.1
- sci-libs/blas-reference-19940131-r2
- sci-libs/cblas-reference-20030223
- sci-libs/lapack-reference-3.0-r2
```

- **Tests Status:** All tests PASSED
- **Comments:** BLAS and LAPACK libs set by using the following system commands:

```
% blas-config reference
% lapack-config reference
```

StdAir configured with:

```
% ./configure --with-blas="-lblas"
```

- **Date:** March 31, 2006
- **Tester:** Adam Piatyszek (ediap)

#### 18.3.1.6 Red Hat Enterprise Linux with StdAir External

- **Platform:** Intel Pentium 4
- **Operating System:** Red Hat Enterprise Linux AS release 4 (Nahant Update 2)
- **Compiler:** g++ (GCC) 3.4.4 20050721 (Red Hat 3.4.4-2)
- **StdAir release:** 3.10.0
- **External Libraries:** BLAS, CBLAS, LAPACK and FFTW libraries from StdAir External 2.1.1 package
- **Tests Status:** All tests PASSED
- **Date:** March 7, 2006
- **Tester:** Erik G. Larsson

### 18.3.1.7 SUSE Linux 10.0 with NetLib's BLAS and LAPACK

- **Platform:** Intel Pentium 4 CPU 3.20GHz (64-bit)
- **Operating System:** SUSE Linux 10.0 (x86\_64)
- **Compiler(s):** g++ (GCC) 4.0.2
- **StdAir release:** 3.10.0
- **External Libraries:** BLAS, LAPACK and FFTW libraries installed from OpenSuse 10.0 RPM repository:

```
- blas-3.0-926
- lapack-3.0-926
- fftw3-3.0.1-114
- fftw3-threads-3.0.1-114
- fftw3-devel-3.0.1-114
```

- **Tests Status:** All tests PASSED
- **Comments:** StdAir configured with:

```
% export CXXFLAGS="-m64 -march=nocona -O3 -pipe"
% ./configure --with-lapack="/usr/lib64/liblapack.so.3"
```

- **Date:** March 1, 2006
- **Tester:** Adam Piatyszek (ediap)

### 18.3.1.8 SUSE Linux 10.0 with MKL

- **Platform:** Intel Pentium 4 CPU 3.20GHz (64-bit)
- **Operating System:** SUSE Linux 10.0 (x86\_64)
- **Compiler(s):** g++ (GCC) 4.0.2
- **StdAir release:** 3.10.0
- **External Libraries:** Intel Math Kernel Library (MKL) 8.0.1 installed manually in the following directory: /opt/intel/mkl/8.0.1

- **Tests Status:** All tests PASSED
- **Comments:** StdAir configured with:

```
% export CXXFLAGS="-m64 -march=nocona -O3 -pipe"
% export LDFLAGS="-L/opt/intel/mkl/8.0.1/lib/em64t"
% export CPPFLAGS="-I/opt/intel/mkl/8.0.1/include"
% ./configure
```

- **Date:** March 1, 2006
- **Tester:** Adam Piatyszek (ediap)

## 18.3.2 Windows Systems

### 18.3.2.1 Microsoft Windows XP with Cygwin

- **Platform:** AMD Sempron 3000+
- **Operating System:** Microsoft Windows XP SP2, Cygwin 1.5.19-4
- **Compiler(s):** g++ (GCC) 3.4.4 (cygming special)
- **StdAir release:** 3.10.1
- **External Libraries:** Installed from Cygwin's repository:
  - fftw-3.0.1-2
  - fftw-dev-3.0.1-1
  - lapack-3.0-4
- **Tests Status:** All tests PASSED
- **Comments:** Only static library can be built. StdAir configured with:

```
% ./configure
```
- **Date:** March 31, 2006
- **Tester:** Adam Piatyszek (ediap)

### 18.3.2.2 Microsoft Windows XP with Cygwin and ATLAS

- **Platform:** AMD Sempron 3000+
- **Operating System:** Microsoft Windows XP SP2, Cygwin 1.5.19-4
- **Compiler(s):** g++ (GCC) 3.4.4 (cygming special)
- **StdAir release:** 3.10.1
- **External Libraries:** Installed from Cygwin's repository:
  - fftw-3.0.1-2
  - fftw-dev-3.0.1-1ATLAS BLAS and LAPACK libraries from StdAir External 2.1.1 package configured using:

```
% ./configure --enable-atlas --disable-fftw
```
- **Tests Status:** All tests PASSED
- **Comments:** Only static library can be built. StdAir configured with:

```
% export LDFLAGS="-L/usr/local/lib"
% ./configure
```
- **Date:** March 31, 2006
- **Tester:** Adam Piatyszek (ediap)

### 18.3.2.3 Microsoft Windows XP with Cygwin and ACML

- **Platform:** AMD Sempron 3000+
- **Operating System:** Microsoft Windows XP SP2, Cygwin 1.5.19-4
- **Compiler(s):** g++ (GCC) 3.4.4 (cygming special)
- **StdAir release:** 3.10.2
- **External Libraries:** ACML version 3.1.0 (acml3.1.0-32-win32-g77.exe) installed into a default directory, i.e. "c:\Program Files\AMD\acml3.1.0"
- **Tests Status:** All tests PASSED
- **Comments:** Only static library can be built. StdAir configured with:

```
% export LDFLAGS="-L/cygdrive/c/Progra~1/AMD/acml3.1.0/gnu32/lib"
% export CPPFLAGS="-I/cygdrive/c/Progra~1/AMD/acml3.1.0/gnu32/include"
% ./configure --enable-debug
```

- **Date:** May 15, 2006
- **Tester:** Adam Piatyszek (ediap)

### 18.3.2.4 Microsoft Windows XP with MinGW, MSYS and ACML

- **Platform:** AMD Sempron 3000+
- **Operating System:** Microsoft Windows XP SP2, MinGW 5.0.2, MSYS 1.0.10
- **Compiler(s):** g++ (GCC) 3.4.4 (mingw special)
- **StdAir release:** 3.10.2
- **External Libraries:** ACML version 3.1.0 (acml3.1.0-32-win32-g77.exe) installed into a default directory, i.e. "c:\Program Files\AMD\acml3.1.0"
- **Tests Status:** All tests PASSED
- **Comments:** Only static library can be built. StdAir configured with:

```
% export LDFLAGS="-L/c/Progra~1/AMD/acml3.1.0/gnu32/lib"
% export CPPFLAGS="-I/c/Progra~1/AMD/acml3.1.0/gnu32/include"
% ./configure --enable-debug
```

- **Date:** May 15, 2006
- **Tester:** Adam Piatyszek (ediap)

#### 18.3.2.5 Microsoft Windows XP with MinGW, MSYS and StdAir External

- **Platform:** AMD Sempron 3000+
- **Operating System:** Microsoft Windows XP SP2, MinGW 5.0.2, MSYS 1.0.10
- **Compiler(s):** g++ (GCC) 3.4.4 (mingw special)
- **StdAir release:** 3.10.5
- **External Libraries:** BLAS, CBLAS, LAPACK and FFTW libraries from StdAir External 2.2.0 package
- **Tests Status:** All tests PASSED
- **Comments:** Only static library can be built. StdAir configured with:

```
% export LDFLAGS="-L/usr/local/lib"
% export CPPFLAGS="-I/usr/local/include"
% export CXXFLAGS="-Wall -O3 -march=athlon-tbird -pipe"
% ./configure --disable-html-doc
```

- **Date:** August 11, 2006
- **Tester:** Adam Piatyszek (ediap)

#### 18.3.2.6 Microsoft Windows XP with MS Visual C++ and Intel MKL

- **Platform:** AMD Sempron 3000+
- **Operating System:** Microsoft Windows XP SP2
- **Compiler(s):** Microsoft Visual C++ 2005 .NET
- **StdAir release:** 3.10.5
- **External Libraries:** Intel Math Kernel Library (MKL) 8.1 installed manually in the following directory: "C:\Program Files\Intel\MKL\8.1"
- **Tests Status:** Not fully tested. Some StdAir based programs compiled and run with success.
- **Comments:** Only static library can be built. StdAir built by opening the "win32\stdair.vcproj" project file in MSVC++ and executing "Build -> Build Solution" command from menu.
- **Date:** August 11, 2006
- **Tester:** Adam Piatyszek (ediap)

### 18.3.3 Unix Systems

#### 18.3.3.1 SunOS 5.9 with StdAir External

- **Platform:** SUNW, Sun-Blade-100 (SPARC)
- **Operating System:** SunOS 5.9 Generic\_112233-10
- **Compiler(s):** g++ (GCC) 3.4.5

- **StdAir release:** 3.10.2
- **External Libraries:** BLAS, CBLAS, LAPACK and FFTW libraries from StdAir External 2.1.1 package. The following configuration command has been used:

```
% export CFLAGS="-mcpu=ultrasparc -O2 -pipe -funroll-all-loops"  
% ./configure
```

- **Tests Status:** All tests PASSED
- **Comments:** StdAir configured with:

```
% export LDFLAGS="-L/usr/local/lib"  
% export CPPFLAGS="-I/usr/local/include"  
% export CXXFLAGS="-mcpu=ultrasparc -O2 -pipe"  
% ./configure --enable-debug
```

- **Date:** May 15, 2006
- **Tester:** Adam Piatyszek (ediap)

## 19 StdAir Supported Systems (Previous Releases)

- [Extend the Pre-Defined BOM Tree](#)
  - [Extend an Airline Inventory Object](#)
  - [Build the Specific BOM Objects](#)
  - [Result of the Tutorial Program](#)

## 20.2 Introduction

This page contains some tutorial examples that will help you getting started using StdAir. Most examples show how to construct some simple business objects, i.e., instances of the so-named Business Object Model (BOM).

### 20.2.1 Preparing the StdAir Project for Development

The source code for these examples can be found in the `batches` and `test/stdair` directories. They are compiled along with the rest of the StdAir project. See the User Guide ([Users Guide](#)) for more details on how to build the StdAir project.

## 20.3 Build a Predefined BOM Tree

A few steps:

- [Instantiate the BOM Root Object](#)
- [Instantiate the \(Airline\) Inventory Object](#)
- [Link the Inventory Object with the BOM Root](#)

### 20.3.1 Instantiate the BOM Root Object

First, a BOM root object (i.e., a root for all the classes in the project) is instantiated by the `stdair::STDAIR_ServiceContext` context object, when the `stdair::STDAIR_Service` is itself instantiated. The corresponding StdAir type (class) is `stdair::BomRoot`.

In the following sample, that object is named `ioBomRoot`, and is given as input/output parameter of the `stdair::CmdBomManager::buildSampleBom()` method:

```
\textcolor{keywordtype}{void} CmdBomManager::buildSampleBom (BomRoot& ioBomRoot) \{
```

### 20.3.2 Instantiate the (Airline) Inventory Object

An airline inventory object can then be instantiated. Let us give it the "BA" airline code (corresponding to [British Airways](#)) as the object key. That is, an object (let us name it `lBAKey`) of type (class) `stdair::InventoryKey` has first to be instantiated.

```
\textcolor{keyword}{const} InventoryKey lBAKey (lAirlineCodeBA);
```

Thanks to that key, an airline inventory object, i.e. of type (class) `stdair::Inventory`, can be instantiated. Let us name that airline inventory object `lBAInv`.

```
Inventory& lBAInv = FacBom<Inventory>::instance().create (lBAKey);
```

### 20.3.3 Link the Inventory Object with the BOM Root

Then, both objects have to be linked: the airline inventory object (`stdair::Inventory`) has to be linked with the root of the BOM tree (`stdair::BomRoot`). That operation is as simple as using the `stdair::FacBomManager::addToListAndMap()` method:

```
FacBomManager::addToListAndMap (ioBomRoot, lBAInv);
FacBomManager::linkWithParent (ioBomRoot, lBAInv);
```

### 20.3.4 Build Another Airline Inventory

Another airline inventory object, corresponding to the Air France ([Air France](#)) company, is instantiated the same way:

```
\textcolor{keyword}{const} InventoryKey lAFKey (lAirlineCodeAF);
Inventory& lAFInv = FacBom<Inventory>::instance().create (lAFKey);
FacBomManager::addToListAndMap (ioBomRoot, lAFInv);
FacBomManager::linkWithParent (ioBomRoot, lAFInv);
```

See the corresponding full program ([C++ Class Building Sample StdAir BOM Trees](#)) for more details.

### 20.3.5 Dump The BOM Tree Content

From the `BomRoot` (of type `stdair::BomRoot`) object instance, the list of airline inventories (of type `stdair::Inventory`) can then be retrieved...

```
\textcolor{keyword}{const} InventoryList\_T& lInventoryList =
  BomManager::getList<Inventory> (iBomRoot);
```

... and browsed:

```
\textcolor{keywordflow}{for} (InventoryList\_T::const\_iterator itInv = lInventoryList.begin();
  itInv != lInventoryList.end(); ++itInv, ++invIdx) \{
  \textcolor{keyword}{const} Inventory* lInv\_ptr = *itInv;
  assert (lInv\_ptr != NULL);

  \textcolor{comment}{// Retrieve the inventory key (airline code)}
  \textcolor{keyword}{const} \hyperlink{a00509_ac0ab9f765621de3140cc27d6472f5581}{AirlineCode\_T}& lAirlineCode = lInv->getAirlineCode();

  \textcolor{comment}{// Display only the requested inventories}
  \textcolor{keywordflow}{if} (iAirlineCode == \textcolor{stringliteral}{all}) || iAirlineCode == lAirlineCode
  \textcolor{comment}{// Get the list of flight-dates for that inventory}
    list (oStream, *lInv\_ptr, invIdx, iFlightNumber);
\}
\}
\}

\textcolor{comment}{// //////////////////////////////////////}
\textcolor{keywordtype}{void} BomDisplay::list (std::ostream& oStream, \textcolor{keyword}{const} InventoryList\_T& lInventoryList,

```

See the corresponding full program ([C++ Utility Class Browsing and Dumping the StdAir BOM Tree](#)) for more details.

### 20.3.6 Result of the Tutorial Program

When the `stdair.cpp` program is run (with the `-b` option), the output should look like:

```

[D]../batches/stdair.cpp:243: Welcome to stdair
[D]../batches/stdair/command/CmdBomManager.cpp:41: StdAir will build the BOM tree from
    built-in specifications.
[D]../batches/stdair.cpp:286:

See the corresponding full program ([Command-Line Utility to Demonstrate Typical StdAir Usage](#)) for more details.

## 20.4 Extend the Pre-Defined BOM Tree

Now that we master how to instantiate the pre-defined StdAir classes, let us see how to extend that BOM.

### 20.4.1 Extend an Airline Inventory Object

For instance, let us assume that some (IT) provider (e.g., you) would like to have a specific implementation of the `Inventory` object. The corresponding class has just to extend the `stdair::Inventory` class:

```
\textcolor{keyword}{namespace }myprovider \{
  \textcolor{keyword}{class }Inventory : \textcolor{keyword}{public} stdair::Inventory \{
```

The STL containers have to be defined accordingly too:

```
\textcolor{keyword}{typedef} std::list<Inventory*> InventoryList\}_T;
```

See the full class definition ([Specific Implementation of an Airline Inventory](#)) and implementation ([Specific Implementation of an Airline Inventory](#)) for more details.

### 20.4.2 Build the Specific BOM Objects

The BOM root object (`stdair::BomRoot`) is instantiated the classical way:

```
\textcolor{keyword}{const} std::string& lBomRootKeyStr = lPersistentBomRoot.describeKey();
```

Then, the specific implementation of the airline inventory object (`myprovider::Inventory`) can be instantiated the same way as a standard `Inventory` (`stdair::Inventory`) would be:

```
\textcolor{keyword}{const} \hyperlink{a00088}{stdair::InventoryKey} lBAKey (lBAAirlineCode);
myprovider::Inventory& lBAInv =
  \hyperlink{a00064}{stdair::FacBom<myprovider::Inventory>::instance}().create (lBAKey);
```

Then, the specific implementation of the airline inventory object (`myprovider::Inventory`) is linked to the root of the BOM tree (`stdair::BomRoot`) the same way as the standard `Inventory` (`stdair::Inventory`) would be:

```
\hyperlink{a00065_a15bd081544ad82cbe13dfefb10600662}{stdair::FacBomManager::addToList} (lBomRoot, lBAInv
```

Another specific airline inventory object is instantiated the same way:

```
\textcolor{keyword}{const} \hyperlink{a00088}{stdair::InventoryKey} lAFKey (lAFAirlineCode);
myprovider::Inventory& lAFInv =
  \hyperlink{a00064}{stdair::FacBom<myprovider::Inventory>::instance}().create (lAFKey);
\hyperlink{a00065_a15bd081544ad82cbe13dfefb10600662}{stdair::FacBomManager::addToList} (lBomRoot, lAFInv
```

From the `BomRoot` (of type `stdair::BomRoot`) object instance, the list of specific airline inventories (of type `stdair::Inventory`) can then be retrieved...

```
\textcolor{keyword}{const} \hyperlink{a00509_aa2443c204cfcb7ce31e90308b9a63d71}{myprovider::InventoryList}
stdair::BomManager::getList<myprovider::Inventory> (lBomRoot);
```

... and browsed:

```
\textcolor{keywordflow}{for} (myprovider::InventoryList\_T::const\_iterator itInv =
    lInventoryList.begin(); itInv != lInventoryList.end();
    ++itInv, ++idx) \{
    \textcolor{keyword}{const} myprovider::Inventory* lInv\_ptr = *itInv;
    BOOST\_REQUIRE (lInv\_ptr != NULL);

    BOOST\_CHECK\_EQUAL (lInventoryKeyArray[idx], lInv\_ptr->describeKey());
    BOOST\_CHECK\_MESSAGE (lInventoryKeyArray[idx] == lInv\_ptr->describeKey(),
        \textcolor{stringliteral}{\"They inventory key, '\"} << lInventoryKeyArray[idx]
        << \textcolor{stringliteral}{\"\", does not match that of the Inventory object: '\"}
        << lInv\_ptr->describeKey() << \textcolor{stringliteral}{\"'\"});
\}
```

### 20.4.3 Result of the Tutorial Program

When this program is run, the output should look like:

```
Inventory: BA
Inventory: AF
```

See the corresponding full program ([Command-Line Test to Demonstrate How To Extend StdAir BOM](#)) for more details.

## 29 Class Index

### 29.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<code>stdair::AirlineClassList</code> (Class representing the actual attributes for a segment-features )	251
<code>stdair::AirlineClassListKey</code> (Key of airport-pair )	257
<code>stdair::AirlineFeature</code> (Class representing various configuration parameters (e.g., revenue management methods such EMSRb or Monte-Carlo) for a given airline for the simulation )	259
<code>stdair::AirlineFeatureKey</code>	267
<code>stdair::AirlineStruct</code>	269
<code>stdair::AirportPair</code> (Class representing the actual attributes for an airport-pair )	271

<a href="#">stdair::AirportPairKey</a> (Key of airport-pair )	275
<a href="#">stdair::BasChronometer</a>	277
<a href="#">stdair::BasDBParams</a> (Structure holding the parameters for connection to a database )	278
<a href="#">stdair::BasFileMgr</a>	282
<a href="#">stdair::BasLogParams</a> (Structure holding parameters for logging )	282
<a href="#">stdair::BomAbstract</a> (Base class for the Business Object Model (BOM) layer )	286
<a href="#">stdair::BomArchive</a> (Utility class to archive/restore BOM objects with Boost serialisation )	288
<a href="#">stdair::BomDisplay</a> (Utility class to display StdAir objects with a pretty format )	289
<a href="#">stdair::BomHolder&lt; BOM &gt;</a> (Class representing the holder of BOM object containers (list and map) )	296
<a href="#">stdair::BomHolderKey</a>	300
<a href="#">stdair::BomID&lt; BOM &gt;</a> (Class wrapper of bom ID (e.g. pointer to object) )	301
<a href="#">stdair::BomINIImport</a> (Utility class to import StdAir objects in a INI format )	303
<a href="#">stdair::BomJSONExport</a> (Utility class to export StdAir objects in a JSON format )	303
<a href="#">stdair::BomJSONImport</a> (Utility class to import StdAir objects in a JSON format )	305
<a href="#">stdair::BomKeyManager</a> (Utility class to extract key structures from strings )	308
<a href="#">stdair::BomManager</a> (Utility class for StdAir-based objects )	311
<a href="#">stdair::BomRetriever</a> (Utility class to retrieve StdAir objects )	314
<a href="#">stdair::BomRoot</a> (Class representing the actual attributes for the Bom root )	324
<a href="#">stdair::BomRootKey</a> (Key of the BOM structure root )	330
<a href="#">stdair_test::BookingClass</a>	333
<a href="#">stdair::BookingClass</a>	334
<a href="#">stdair::BookingClassKey</a>	351
<a href="#">stdair::BookingClassListEmptyInNestingStructException</a>	353
<a href="#">stdair::BookingRequestStruct</a> (Structure holding the elements of a booking request )	354
<a href="#">stdair::BreakPointStruct</a>	361
<a href="#">stdair::Bucket</a> (Class representing the actual attributes for an airline booking class )	363
<a href="#">stdair::BucketKey</a> (Key of booking-class )	368
<a href="#">stdair_test::Cabin</a>	371
<a href="#">stdair::CancellationStruct</a> (Structure holding the elements of a travel solution )	372

<a href="#">stdair::CmdAbstract</a>	375
<a href="#">stdair::CmdBomManager</a>	375
<a href="#">stdair::CmdBomSerialiser</a>	376
<a href="#">stdair::CmdCloneBomManager</a>	376
<a href="#">stdair::CodeConversionException</a>	377
<a href="#">stdair::CodeDuplicationException</a>	378
<a href="#">COMMAND</a>	379
<a href="#">stdair::ConfigHolderStruct</a>	380
<a href="#">stdair::ConfigINIFile</a>	383
<a href="#">stdair::ContinuousAttributeLite&lt; T &gt; (Class modeling the distribution of values that can be taken by a continuous attribute )</a>	384
<a href="#">stdair::date_time_element&lt; MIN, MAX &gt;</a>	387
<a href="#">stdair::DatePeriod (Class representing the actual attributes for a fare date-period )</a>	388
<a href="#">stdair::DatePeriodKey (Key of date-period )</a>	392
<a href="#">stdair::DbAbstract</a>	394
<a href="#">stdair::DBManagerForAirlines</a>	395
<a href="#">stdair::DBSessionManager</a>	396
<a href="#">stdair::DefaultDCPList</a>	397
<a href="#">stdair::DefaultDtdFratMap</a>	398
<a href="#">stdair::DefaultDtdProbMap</a>	398
<a href="#">stdair::DefaultMap</a>	399
<a href="#">stdair::DemandGenerationMethod (Enumeration of demand (booking request) generation methods )</a>	401
<a href="#">stdair::DictionaryManager (Class wrapper of dictionary business methods )</a>	405
<a href="#">stdair::DocumentNotFoundException</a>	406
<a href="#">stdair::DoWStruct</a>	407
<a href="#">stdair::EventException</a>	410
<a href="#">stdair::EventStruct</a>	411
<a href="#">stdair::EventType</a>	417
<a href="#">stdair::FacAbstract</a>	420

<a href="#">stdair::FacBom&lt; BOM &gt; (Base class for Factory layer )</a>	421
<a href="#">stdair::FacBomManager (Utility class for linking StdAir-based objects )</a>	423
<a href="#">stdair::FacCloneBom&lt; BOM &gt; (Base class for Factory layer )</a>	428
<a href="#">stdair::FacServiceAbstract</a>	430
<a href="#">stdair::FacSTDAIRServiceContext (Factory for Bucket )</a>	432
<a href="#">stdair::FacSupervisor</a>	434
<a href="#">stdair::FareFamily (Class representing the actual attributes for a family fare )</a>	438
<a href="#">stdair::FareFamilyKey (Key of a given fare family, made of a fare family code )</a>	444
<a href="#">stdair::FareFeatures (Class representing the actual attributes for a fare date-period )</a>	447
<a href="#">stdair::FareFeaturesKey (Key of date-period )</a>	452
<a href="#">stdair::FareOptionStruct (Structure holding the elements of a fare option )</a>	455
<a href="#">stdair::FFDisutilityCurveHolderStruct</a>	459
<a href="#">stdair::FFDisutilityFilePath</a>	461
<a href="#">stdair::FileNotFoundException</a>	462
<a href="#">stdair::FlightDate (Class representing the actual attributes for an airline flight-date )</a>	463
<a href="#">stdair::FlightDateKey (Key of a given flight-date, made of a flight number and a departure date )</a>	470
<a href="#">stdair::FlightPeriod</a>	472
<a href="#">stdair::FlightPeriodKey</a>	476
<a href="#">FloatingPoint&lt; RawType &gt;</a>	479
<a href="#">stdair::ForecastingMethod</a>	482
<a href="#">stdair::FRAT5CurveHolderStruct</a>	486
<a href="#">stdair::FRAT5FilePath</a>	488
<a href="#">stdair::InputFilePath</a>	489
<a href="#">stdair::Inventory (Class representing the actual attributes for an airline inventory )</a>	490
<a href="#">stdair::InventoryKey (Key of a given inventory, made of the airline code )</a>	497
<a href="#">stdair::JJsonCommand (Enumeration of json commands )</a>	499
<a href="#">stdair::JSONString (JSON-formatted string )</a>	502
<a href="#">stdair::KeyAbstract (Base class for the keys of Business Object Model (BOM) layer )</a>	504
<a href="#">stdair::KeyDuplicationException</a>	506

<a href="#">stdair::KeyNotFoundException</a>	508
<a href="#">stdair::LegCabin</a> (Class representing the actual attributes for an airline leg-cabin )	509
<a href="#">stdair::LegCabinKey</a> (Key of a given leg-cabin, made of a cabin code (only) )	525
<a href="#">stdair::LegDate</a>	527
<a href="#">stdair::LegDateKey</a>	537
<a href="#">stdair::Logger</a>	538
<a href="#">stdair::MemoryAllocationException</a>	540
<a href="#">stdair::NestingNode</a>	541
<a href="#">stdair::NestingNodeKey</a> (Key of a given policy, made of a policy code )	544
<a href="#">stdair::NestingStructureKey</a> (Key of a given policy, made of a policy code )	547
<a href="#">stdair::NonInitialisedContainerException</a>	549
<a href="#">stdair::NonInitialisedDBSessionManagerException</a>	550
<a href="#">stdair::NonInitialisedLogServiceException</a>	551
<a href="#">stdair::NonInitialisedRelationShipException</a>	553
<a href="#">stdair::NonInitialisedServiceException</a>	554
<a href="#">stdair::ObjectCreationgDuplicationException</a>	555
<a href="#">stdair::ObjectLinkingException</a>	556
<a href="#">stdair::ObjectNotFoundException</a>	557
<a href="#">stdair::ODFilePath</a>	559
<a href="#">stdair::OnDDate</a> (Class representing the actual attributes for an airline flight-date )	560
<a href="#">stdair::OnDDateKey</a> (Key of a given O&D-date, made of a list of OnD strings. a OnD string contains the airline code, the flight number, the date and the segment (origin and destination) )	566
<a href="#">stdair::OptimisationMethod</a>	569
<a href="#">stdair::OptimisationNotificationStruct</a>	573
<a href="#">stdair::ParsedKey</a>	577
<a href="#">stdair::ParserException</a>	581
<a href="#">stdair::ParsingFileFailedException</a>	582
<a href="#">stdair::PartnershipTechnique</a> (Enumeration of partnership techniques )	583
<a href="#">stdair::PassengerChoiceModel</a>	587

<a href="#">stdair::PassengerType</a>	591
<a href="#">stdair::PeriodStruct</a>	594
<a href="#">stdair::Policy</a>	598
<a href="#">stdair::PolicyKey</a> (Key of a given policy, made of a policy code )	602
<a href="#">stdair::PosChannel</a> (Class representing the actual attributes for a fare point of sale )	604
<a href="#">stdair::PosChannelKey</a> (Key of point of sale and channel )	609
<a href="#">stdair::PreOptimisationMethod</a>	611
<a href="#">stdair::ProgressStatus</a>	614
<a href="#">stdair::ProgressStatusSet</a>	619
<a href="#">stdair::RandomGeneration</a> (Class holding a random generator )	622
<a href="#">stdair::RMEventStruct</a>	625
<a href="#">stdair::RootException</a> (Root of the <a href="#">stdair</a> exceptions )	628
<a href="#">stdair::RootFilePath</a> (Root of the input and output files )	630
<a href="#">stdair::SampleType</a> (Enumeration of BOM sample types )	631
<a href="#">stdair::ScheduleFilePath</a>	635
<a href="#">stdair::SegmentCabin</a> (Class representing the actual attributes for an airline segment-cabin )	636
<a href="#">stdair::SegmentCabinKey</a> (Key of a given segment-cabin, made of a cabin code (only) )	647
<a href="#">stdair::SegmentDate</a> (Class representing the actual attributes for an airline segment-date )	649
<a href="#">stdair::SegmentDateKey</a> (Key of a given segment-date, made of an origin and a destination airports )	658
<a href="#">stdair::SegmentPeriod</a>	661
<a href="#">stdair::SegmentPeriodKey</a>	668
<a href="#">stdair::SegmentSnapshotTable</a> (Class representing the actual attributes for an airline segment data tables )	670
<a href="#">stdair::SegmentSnapshotTableKey</a> (Key of a given guillotine block, made of a guillotine number )	684
<a href="#">stdair::SerialisationException</a>	687
<a href="#">stdair::ServiceAbstract</a>	688
<a href="#">stdair::ServiceInitialisationType</a> (Enumeration of service initialisation types )	689
<a href="#">stdair::SimpleNestingStructException</a>	693
<a href="#">stdair::SimpleNestingStructure</a>	694

<a href="#">swift::SKeymap</a> (The readline keymap wrapper )	698
<a href="#">stdair::SnapshotStruct</a>	700
<a href="#">stdair::SQLDatabaseConnectionImpossibleException</a>	702
<a href="#">stdair::SQLDatabaseException</a>	703
<a href="#">swift::SReadline</a> (The readline library wrapper )	705
<a href="#">stdair::STDAIR_Service</a> (Interface for the STDAIR Services )	710
<a href="#">stdair::STDAIR_ServiceContext</a> (Class holding the context of the Stdair services )	723
<a href="#">stdair::StructAbstract</a> (Base class for the light structures )	724
<a href="#">stdair::TimePeriod</a> (Class representing the actual attributes for a fare time-period )	727
<a href="#">stdair::TimePeriodKey</a> (Key of time-period )	731
<a href="#">stdair::TravelSolutionStruct</a> (Structure holding the elements of a travel solution )	733
<a href="#">soci::type_conversion&lt; stdair::AirlineStruct &gt;</a>	738
<a href="#">TypeWithSize&lt; size &gt;</a>	739
<a href="#">TypeWithSize&lt; 4 &gt;</a>	739
<a href="#">TypeWithSize&lt; 8 &gt;</a>	740
<a href="#">stdair::UnconstrainingMethod</a>	741
<a href="#">stdair::VirtualClassStruct</a>	744
<a href="#">stdair::YieldFeatures</a> (Class representing the actual attributes for a yield date-period )	748
<a href="#">stdair::YieldFeaturesKey</a> (Key of date-period )	752
<a href="#">stdair::YieldRange</a>	754
<a href="#">stdair::YieldStore</a>	757
<a href="#">stdair::YieldStoreKey</a>	761

## 30 File Index

### 30.1 File List

Here is a list of all files with brief descriptions:

<a href="#">batches/stdair.cpp</a>	763
<a href="#">stdair/stdair_basic_types.hpp</a>	1679
<a href="#">stdair/stdair_date_time_types.hpp</a>	1683

<a href="#">stdair/stdair_db.hpp</a>	1685
<a href="#">stdair/stdair_demand_types.hpp</a>	1687
<a href="#">stdair/stdair_event_types.hpp</a>	1691
<a href="#">stdair/stdair_exceptions.hpp</a>	1693
<a href="#">stdair/stdair_fare_types.hpp</a>	1697
<a href="#">stdair/stdair_file.hpp</a>	1699
<a href="#">stdair/stdair_inventory_types.hpp</a>	1702
<a href="#">stdair/stdair_json.hpp</a>	1706
<a href="#">stdair/stdair_log.hpp</a>	1708
<a href="#">stdair/stdair_maths_types.hpp</a>	1710
<a href="#">stdair/stdair_rm_types.hpp</a>	1712
<a href="#">stdair/STDAIR_Service.hpp</a>	1714
<a href="#">stdair/stdair_service_types.hpp</a>	1718
<a href="#">stdair/stdair_types.hpp</a>	1720

## 31.5 stdair Namespace Reference

Handle on the StdAir library context.

## Namespaces

- namespace [LOG](#)

## Classes

- struct [BasChronometer](#)
- struct [DefaultDCPList](#)
- struct [DefaultDtdFratMap](#)
- struct [DefaultDtdProbMap](#)
- struct [DefaultMap](#)
- struct [BasDBParams](#)

*Structure holding the parameters for connection to a database.*

- struct [BasFileMgr](#)
- struct [BasLogParams](#)  
*Structure holding parameters for logging.*
- struct [date\\_time\\_element](#)
- struct [ContinuousAttributeLite](#)  
*Class modeling the distribution of values that can be taken by a continuous attribute.*
- struct [DemandGenerationMethod](#)  
*Enumeration of demand (booking request) generation methods.*
- class [DictionaryManager](#)  
*Class wrapper of dictionary business methods.*
- struct [EventType](#)
- struct [ForecastingMethod](#)
- struct [JSqlCommand](#)  
*Enumeration of json commands.*
- struct [OptimisationMethod](#)
- struct [PartnershipTechnique](#)  
*Enumeration of partnership techniques.*
- struct [PassengerChoiceModel](#)
- struct [PassengerType](#)
- struct [PreOptimisationMethod](#)
- struct [ProgressStatus](#)
- struct [ProgressStatusSet](#)
- struct [RandomGeneration](#)  
*Class holding a random generator.*
- struct [SampleType](#)  
*Enumeration of BOM sample types.*
- struct [ServiceInitialisationType](#)  
*Enumeration of service initialisation types.*
- struct [StructAbstract](#)  
*Base class for the light structures.*
- struct [UnconstrainingMethod](#)
- class [YieldRange](#)
- class [AirlineClassList](#)  
*Class representing the actual attributes for a segment-features.*
- struct [AirlineClassListKey](#)  
*Key of airport-pair.*
- class [AirlineFeature](#)

*Class representing various configuration parameters (e.g., revenue management methods such EMSRb or Monte-Carlo) for a given airline for the simulation.*

- struct [AirlineFeatureKey](#)
- struct [AirlineStruct](#)
- class [AirportPair](#)

*Class representing the actual attributes for an airport-pair.*

- struct [AirportPairKey](#)

*Key of airport-pair.*

- class [BomAbstract](#)

*Base class for the Business Object Model (BOM) layer.*

- class [BomArchive](#)

*Utility class to archive/restore BOM objects with Boost serialisation.*

- class [BomDisplay](#)

*Utility class to display StdAir objects with a pretty format.*

- class [BomHolder](#)

*Class representing the holder of BOM object containers (list and map).*

- struct [BomHolderKey](#)

- struct [BomID](#)

*Class wrapper of bom ID (e.g. pointer to object).*

- class [BomINIImport](#)

*Utility class to import StdAir objects in a INI format.*

- class [BomJSONExport](#)

*Utility class to export StdAir objects in a JSON format.*

- class [BomJSONImport](#)

*Utility class to import StdAir objects in a JSON format.*

- class [BomKeyManager](#)

*Utility class to extract key structures from strings.*

- class [BomManager](#)

*Utility class for StdAir-based objects.*

- class [BomRetriever](#)

*Utility class to retrieve StdAir objects.*

- class [BomRoot](#)

*Class representing the actual attributes for the Bom root.*

- struct [BomRootKey](#)

*Key of the BOM structure root.*

- class [BookingClass](#)
- struct [BookingClassKey](#)
- struct [BookingRequestStruct](#)  
*Structure holding the elements of a booking request.*
- struct [BreakPointStruct](#)
- class [Bucket](#)  
*Class representing the actual attributes for an airline booking class.*
- struct [BucketKey](#)  
*Key of booking-class.*
- struct [CancellationStruct](#)  
*Structure holding the elements of a travel solution.*
- struct [ConfigHolderStruct](#)
- class [DatePeriod](#)  
*Class representing the actual attributes for a fare date-period.*
- struct [DatePeriodKey](#)  
*Key of date-period.*
- struct [DoWStruct](#)
- struct [EventStruct](#)
- class [FareFamily](#)  
*Class representing the actual attributes for a family fare.*
- struct [FareFamilyKey](#)  
*Key of a given fare family, made of a fare family code.*
- class [FareFeatures](#)  
*Class representing the actual attributes for a fare date-period.*
- struct [FareFeaturesKey](#)  
*Key of date-period.*
- struct [FareOptionStruct](#)  
*Structure holding the elements of a fare option.*
- struct [FFDisutilityCurveHolderStruct](#)
- class [FlightDate](#)  
*Class representing the actual attributes for an airline flight-date.*
- struct [FlightDateKey](#)  
*Key of a given flight-date, made of a flight number and a departure date.*
- class [FlightPeriod](#)
- struct [FlightPeriodKey](#)
- struct [FRAT5CurveHolderStruct](#)

- class [Inventory](#)  
*Class representing the actual attributes for an airline inventory.*
- struct [InventoryKey](#)  
*Key of a given inventory, made of the airline code.*
- struct [KeyAbstract](#)  
*Base class for the keys of Business Object Model (BOM) layer.*
- class [LegCabin](#)  
*Class representing the actual attributes for an airline leg-cabin.*
- struct [LegCabinKey](#)  
*Key of a given leg-cabin, made of a cabin code (only).*
- class [LegDate](#)
- struct [LegDateKey](#)
- class [NestingNode](#)
- struct [NestingNodeKey](#)  
*Key of a given policy, made of a policy code.*
- struct [NestingStructureKey](#)  
*Key of a given policy, made of a policy code.*
- class [OnDDate](#)  
*Class representing the actual attributes for an airline flight-date.*
- struct [OnDDateKey](#)  
*Key of a given O&D-date, made of a list of OnD strings. a OnD string contains the airline code, the flight number, the date and the segment (origin and destination).*
- struct [OptimisationNotificationStruct](#)
- struct [ParsedKey](#)
- struct [PeriodStruct](#)
- class [Policy](#)
- struct [PolicyKey](#)  
*Key of a given policy, made of a policy code.*
- class [PosChannel](#)  
*Class representing the actual attributes for a fare point of sale.*
- struct [PosChannelKey](#)  
*Key of point of sale and channel.*
- struct [RMEventStruct](#)
- class [SegmentCabin](#)  
*Class representing the actual attributes for an airline segment-cabin.*
- struct [SegmentCabinKey](#)  
*Key of a given segment-cabin, made of a cabin code (only).*

- class [SegmentDate](#)  
*Class representing the actual attributes for an airline segment-date.*
- struct [SegmentDateKey](#)  
*Key of a given segment-date, made of an origin and a destination airports.*
- class [SegmentPeriod](#)
- struct [SegmentPeriodKey](#)
- class [SegmentSnapshotTable](#)  
*Class representing the actual attributes for an airline segment data tables.*
- struct [SegmentSnapshotTableKey](#)  
*Key of a given guillotine block, made of a guillotine number.*
- class [SimpleNestingStructure](#)
- struct [SnapshotStruct](#)
- class [TimePeriod](#)  
*Class representing the actual attributes for a fare time-period.*
- struct [TimePeriodKey](#)  
*Key of time-period.*
- struct [TravelSolutionStruct](#)  
*Structure holding the elements of a travel solution.*
- struct [VirtualClassStruct](#)
- class [YieldFeatures](#)  
*Class representing the actual attributes for a yield date-period.*
- struct [YieldFeaturesKey](#)  
*Key of date-period.*
- class [YieldStore](#)
- struct [YieldStoreKey](#)
- class [CmdAbstract](#)
- class [CmdBomManager](#)
- class [CmdBomSerialiser](#)
- class [CmdCloneBomManager](#)
- class [DBManagerForAirlines](#)
- class [DbAbstract](#)
- class [FacAbstract](#)
- class [FacBom](#)  
*Base class for Factory layer.*
- class [FacBomManager](#)  
*Utility class for linking StdAir-based objects.*
- class [FacCloneBom](#)  
*Base class for Factory layer.*

- class [DBSessionManager](#)
- class [FacServiceAbstract](#)
- class [FacSTDAIRServiceContext](#)

*Factory for [Bucket](#).*

- class [FacSupervisor](#)
- class [Logger](#)
- class [ServiceAbstract](#)
- class [STDAIR\\_ServiceContext](#)

*Class holding the context of the Stdair services.*

- class [RootException](#)

*Root of the [stdair](#) exceptions.*

- class [FileNotFoundException](#)
- class [NonInitialisedLogServiceException](#)
- class [NonInitialisedServiceException](#)
- class [NonInitialisedContainerException](#)
- class [NonInitialisedRelationShipException](#)
- class [MemoryAllocationException](#)
- class [ObjectLinkingException](#)
- class [DocumentNotFoundException](#)
- class [ParserException](#)
- class [SerialisationException](#)
- class [KeyNotFoundException](#)
- class [CodeConversionException](#)
- class [CodeDuplicationException](#)
- class [KeyDuplicationException](#)
- class [ObjectCreationDuplicationException](#)
- class [ObjectNotFoundException](#)
- class [ParsingFileFailedException](#)
- class [SQLDatabaseException](#)
- class [NonInitialisedDBSessionManagerException](#)
- class [SQLDatabaseConnectionImpossibleException](#)
- class [EventException](#)
- class [SimpleNestingStructException](#)
- class [BookingClassListEmptyInNestingStructException](#)
- class [RootFilePath](#)

*Root of the input and output files.*

- class [InputFilePath](#)
- class [ScheduleFilePath](#)
- class [ODFilePath](#)
- class [FRAT5FilePath](#)
- class [FFDisutilityFilePath](#)
- class [ConfigINIFile](#)
- class [JSONString](#)

*JSON-formatted string.*

- class [STDAIR\\_Service](#)

*Interface for the STDAIR Services.*

### 31.5.1 Detailed Description

Handle on the StdAir library context.

#### Author:

Anh Quan Nguyen <[quannaus@users.sourceforge.net](mailto:quannaus@users.sourceforge.net)>

#### Date:

20/01/2010 StdAir aims at providing a clean API, and the corresponding C++ implementation, for the basis of Airline IT Business Object Model (BOM), that is, to be used by several other Open Source projects, such as RMOL and OpenTREP.

Install the StdAir library for Airline IT Standard C++ fundaments.

### 31.5.2 Typedef Documentation

#### 31.5.2.1 `typedef date_time_element<0, 23> stdair::hour_t`

Type definitions for the date and time elements.

Definition at line 61 of file [BasParserHelperTypes.hpp](#).

#### 31.5.2.2 `typedef date_time_element<0, 59> stdair::minute_t`

Definition at line 62 of file [BasParserHelperTypes.hpp](#).

#### 31.5.2.3 `typedef date_time_element<0, 59> stdair::second_t`

Definition at line 63 of file [BasParserHelperTypes.hpp](#).

#### 31.5.2.4 `typedef date_time_element<1900, 2100> stdair::year_t`

Definition at line 64 of file [BasParserHelperTypes.hpp](#).

#### 31.5.2.5 `typedef date_time_element<1, 12> stdair::month_t`

Definition at line 65 of file [BasParserHelperTypes.hpp](#).

#### 31.5.2.6 `typedef date_time_element<1, 31> stdair::day_t`

Definition at line 66 of file [BasParserHelperTypes.hpp](#).

#### 31.5.2.7 `typedef std::istreambuf_iterator<char> stdair::base_iterator_t`

Definition at line 26 of file [BasParserTypes.hpp](#).

#### 31.5.2.8 `typedef boost::spirit::multi_pass<base_iterator_t> stdair::iterator_t`

Definition at line 27 of file [BasParserTypes.hpp](#).

**31.5.2.9 typedef boost::spirit::qi::int\_parser<unsigned int, 10, 1, 1> stdair::int1\_p\_t**

1-digit-integer parser

Definition at line 35 of file [BasParserTypes.hpp](#).**31.5.2.10 typedef boost::spirit::qi::uint\_parser<int, 10, 2, 2> stdair::uint2\_p\_t**

2-digit-integer parser

Definition at line 38 of file [BasParserTypes.hpp](#).**31.5.2.11 typedef boost::spirit::qi::uint\_parser<int, 10, 4, 4> stdair::uint4\_p\_t**

4-digit-integer parser

Definition at line 41 of file [BasParserTypes.hpp](#).**31.5.2.12 typedef boost::spirit::qi::uint\_parser<int, 10, 1, 4> stdair::uint1\_4\_p\_t**

Up-to-4-digit-integer parser

Definition at line 44 of file [BasParserTypes.hpp](#).**31.5.2.13 typedef boost::spirit::qi::uint\_parser<hour\_t, 10, 2, 2> stdair::hour\_p\_t**

Date &amp; time element parsers.

Definition at line 47 of file [BasParserTypes.hpp](#).**31.5.2.14 typedef boost::spirit::qi::uint\_parser<minute\_t, 10, 2, 2> stdair::minute\_p\_t**Definition at line 48 of file [BasParserTypes.hpp](#).**31.5.2.15 typedef boost::spirit::qi::uint\_parser<second\_t, 10, 2, 2> stdair::second\_p\_t**Definition at line 49 of file [BasParserTypes.hpp](#).**31.5.2.16 typedef boost::spirit::qi::uint\_parser<year\_t, 10, 4, 4> stdair::year\_p\_t**Definition at line 50 of file [BasParserTypes.hpp](#).**31.5.2.17 typedef boost::spirit::qi::uint\_parser<month\_t, 10, 2, 2> stdair::month\_p\_t**Definition at line 51 of file [BasParserTypes.hpp](#).

**31.5.2.18** `typedef boost::spirit::qi::uint_parser<day_t, 10, 2, 2> stdair::day_p_t`

Definition at line 52 of file [BasParserTypes.hpp](#).

**31.5.2.19** `typedef unsigned short stdair::DictionaryKey_T`

Dictionary key.

Definition at line 17 of file [DictionaryManager.hpp](#).

**31.5.2.20** `typedef std::list<AirlineClassList*> stdair::AirlineClassListList_T`

Define the segment-features list.

Definition at line 17 of file [AirlineClassListTypes.hpp](#).

**31.5.2.21** `typedef std::map<const MapKey_T, AirlineClassList*> stdair::AirlineClassListMap_T`

Define the segment-features map.

Definition at line 23 of file [AirlineClassListTypes.hpp](#).

**31.5.2.22** `typedef std::pair<MapKey_T, AirlineClassList*> stdair::AirlineClassListWithKey_T`

Define the list of pair<MapKey\_T, AirlineCodeList>.

Definition at line 26 of file [AirlineClassListTypes.hpp](#).

**31.5.2.23** `typedef std::list<AirlineClassListWithKey_T> stdair::AirlineClassListDetailedList_T`

Definition at line 27 of file [AirlineClassListTypes.hpp](#).

**31.5.2.24** `typedef std::list<AirlineFeature*> stdair::AirlineFeatureList_T`

Define the airline feature list.

Definition at line 17 of file [AirlineFeatureTypes.hpp](#).

**31.5.2.25** `typedef std::map<const MapKey_T, AirlineFeature*> stdair::AirlineFeatureMap_T`

Define the airline feature map.

Definition at line 23 of file [AirlineFeatureTypes.hpp](#).

**31.5.2.26** `typedef std::list<AirportPair*> stdair::AirportPairList_T`

Define the airport-pair list.

Definition at line 17 of file [AirportPairTypes.hpp](#).

**31.5.2.27 typedef std::map<const MapKey\_T, AirportPair\*> stdair::AirportPairMap\_T**

Define the airport-pair map.

Definition at line 23 of file [AirportPairTypes.hpp](#).

**31.5.2.28 typedef std::pair<MapKey\_T, AirportPair\*> stdair::AirportPairWithKey\_T**

Define the list of pair<MapKey\_T, AirportPair>.

Definition at line 26 of file [AirportPairTypes.hpp](#).

**31.5.2.29 typedef std::list<AirportPairWithKey\_T> stdair::AirportPairDetailedList\_T**

Definition at line 27 of file [AirportPairTypes.hpp](#).

**31.5.2.30 typedef std::map<const std::type\_info\*, BomAbstract\*> stdair::HolderMap\_T**

Definition at line 63 of file [BomAbstract.hpp](#).

**31.5.2.31 typedef struct BomID< BookingClass > stdair::BookingClassID\_T**

Define the booking class ID.

Definition at line 21 of file [BomIDTypes.hpp](#).

**31.5.2.32 typedef std::list<BookingClassID\_T> stdair::BookingClassIDList\_T**

Define the list of booking class ID's.

Definition at line 24 of file [BomIDTypes.hpp](#).

**31.5.2.33 typedef boost::tokenizer< boost::char\_separator< char > > stdair::Tokeniser\_T**

Boost Tokeniser.

Definition at line 28 of file [BomKeyManager.cpp](#).

**31.5.2.34 typedef std::list<BookingClass\*> stdair::BookingClassList\_T**

Define the booking class list.

Definition at line 17 of file [BookingClassTypes.hpp](#).

**31.5.2.35 typedef std::map<const MapKey\_T, BookingClass\*> stdair::BookingClassMap\_T**

Define the booking class map.

Definition at line 23 of file [BookingClassTypes.hpp](#).

**31.5.2.36 typedef boost::shared\_ptr<BookingRequestStruct> stdair::BookingRequestPtr\_T**

Define the smart pointer to a booking request.

Definition at line 14 of file [BookingRequestTypes.hpp](#).

**31.5.2.37 typedef std::string stdair::DemandGeneratorKey\_T**

Define the hash key for the demand generator.

Definition at line 21 of file [BookingRequestTypes.hpp](#).

**31.5.2.38 typedef boost::shared\_ptr<BreakPointStruct> stdair::BreakPointPtr\_T**

Define the smart pointer to a Break Point event .

Definition at line 16 of file [BreakPointTypes.hpp](#).

**31.5.2.39 typedef std::list<BreakPointStruct> stdair::BreakPointList\_T**

Define the list of Break Points.

Definition at line 23 of file [BreakPointTypes.hpp](#).

**31.5.2.40 typedef std::list<Bucket\*> stdair::BucketList\_T**

Define the bucket list.

Definition at line 17 of file [BucketTypes.hpp](#).

**31.5.2.41 typedef std::map<const MapKey\_T, Bucket\*> stdair::BucketMap\_T**

Define the bucket map.

Definition at line 23 of file [BucketTypes.hpp](#).

**31.5.2.42 typedef boost::shared\_ptr<CancellationStruct> stdair::CancellationPtr\_T**

Define the smart pointer to a cancellation .

Definition at line 14 of file [CancellationTypes.hpp](#).

**31.5.2.43 typedef boost::shared\_ptr<ConfigHolderStruct> stdair::ConfigHolderPtr\_T**

Define the smart pointer to a Config Holder structure.

Definition at line 16 of file [ConfigHolderTypes.hpp](#).

**31.5.2.44 typedef std::list<DatePeriod\*> stdair::DatePeriodList\_T**

Define the date-period list.

Definition at line 17 of file [DatePeriodTypes.hpp](#).

**31.5.2.45** `typedef std::map<const MapKey_T, DatePeriod*> stdair::DatePeriodMap_T`

Define the date-period map.

Definition at line 23 of file [DatePeriodTypes.hpp](#).

**31.5.2.46** `typedef std::pair<MapKey_T, DatePeriod*> stdair::DatePeriodWithKey_T`

Define the list of pair<MapKey\_T, DatePeriod>.

Definition at line 26 of file [DatePeriodTypes.hpp](#).

**31.5.2.47** `typedef std::list<DatePeriodWithKey_T> stdair::DatePeriodDetailedList_T`

Definition at line 27 of file [DatePeriodTypes.hpp](#).

**31.5.2.48** `typedef std::pair<const LongDuration_T, EventStruct> stdair::EventListElement_T`

Define an element of a event list.

Definition at line 22 of file [EventTypes.hpp](#).

**31.5.2.49** `typedef std::map<const LongDuration_T, EventStruct> stdair::EventList_T`

Define a list of events.

Definition at line 32 of file [EventTypes.hpp](#).

**31.5.2.50** `typedef std::list<FareFamily*> stdair::FareFamilyList_T`

Define the fare family list.

Definition at line 17 of file [FareFamilyTypes.hpp](#).

**31.5.2.51** `typedef std::map<const MapKey_T, FareFamily*> stdair::FareFamilyMap_T`

Define the fare family map.

Definition at line 23 of file [FareFamilyTypes.hpp](#).

**31.5.2.52** `typedef std::list<FareFeatures*> stdair::FareFeaturesList_T`

Define the date-period list.

Definition at line 17 of file [FareFeaturesTypes.hpp](#).

**31.5.2.53** `typedef std::map<const MapKey_T, FareFeatures*> stdair::FareFeaturesMap_T`

Define the date-period map.

Definition at line 23 of file [FareFeaturesTypes.hpp](#).

**31.5.2.54** `typedef std::pair<MapKey_T, FareFeatures*> stdair::FareFeaturesWithKey_T`

Define the list of pair<MapKey\_T, FareFeatures>.

Definition at line 26 of file [FareFeaturesTypes.hpp](#).

**31.5.2.55** `typedef std::list<FareFeaturesWithKey_T> stdair::FareFeaturesDetailedList_T`

Definition at line 27 of file [FareFeaturesTypes.hpp](#).

**31.5.2.56** `typedef std::list<FareOptionStruct> stdair::FareOptionList_T`

Define the booking class list.

Definition at line 18 of file [FareOptionTypes.hpp](#).

**31.5.2.57** `typedef std::map<const std::string, FFDisutilityCurve_T>  
stdair::FFDisutilityCurveHolder_T`

Definition at line 16 of file [FFDisutilityCurveHolderStruct.hpp](#).

**31.5.2.58** `typedef std::list<FlightDate*> stdair::FlightDateList_T`

Define the flight-date list.

Definition at line 17 of file [FlightDateTypes.hpp](#).

**31.5.2.59** `typedef std::map<const MapKey_T, FlightDate*> stdair::FlightDateMap_T`

Define the flight-date map.

Definition at line 24 of file [FlightDateTypes.hpp](#).

**31.5.2.60** `typedef std::list<FlightPeriod*> stdair::FlightPeriodList_T`

Define the flight-period list.

Definition at line 17 of file [FlightPeriodTypes.hpp](#).

**31.5.2.61** `typedef std::map<const MapKey_T, FlightPeriod*> stdair::FlightPeriodMap_T`

Define the flight-period map.

Definition at line 23 of file [FlightPeriodTypes.hpp](#).

**31.5.2.62** `typedef std::map<const std::string, FRAT5Curve_T> stdair::FRAT5CurveHolder_T`

Definition at line 16 of file [FRAT5CurveHolderStruct.hpp](#).

#### 31.5.2.63 `typedef std::list<Inventory*> stdair::InventoryList_T`

Define the [Inventory](#) list.

Definition at line 17 of file [InventoryTypes.hpp](#).

#### 31.5.2.64 `typedef std::map<const MapKey_T, Inventory*> stdair::InventoryMap_T`

Define the [Inventory](#) map.

Definition at line 23 of file [InventoryTypes.hpp](#).

#### 31.5.2.65 `typedef std::string stdair::MapKey_T`

Key of a STL map.

Definition at line 15 of file [key\\_types.hpp](#).

#### 31.5.2.66 `typedef std::list<std::string> stdair::KeyList_T`

List of keys.

Definition at line 18 of file [key\\_types.hpp](#).

#### 31.5.2.67 `typedef std::list<LegCabin*> stdair::LegCabinList_T`

Define the leg-cabin list.

Definition at line 17 of file [LegCabinTypes.hpp](#).

#### 31.5.2.68 `typedef std::map<const MapKey_T, LegCabin*> stdair::LegCabinMap_T`

Define the leg-cabin map.

Definition at line 23 of file [LegCabinTypes.hpp](#).

#### 31.5.2.69 `typedef std::list<LegDate*> stdair::LegDateList_T`

Define the leg-date list.

Definition at line 17 of file [LegDateTypes.hpp](#).

#### 31.5.2.70 `typedef std::map<const MapKey_T, LegDate*> stdair::LegDateMap_T`

Define the leg-date map.

Definition at line 23 of file [LegDateTypes.hpp](#).

**31.5.2.71 typedef std::list<NestingNode\*> stdair::NestingNodeList\_T**

Define the fare family list.

Definition at line 17 of file [NestingNodeTypes.hpp](#).

**31.5.2.72 typedef std::map<const MapKey\_T, NestingNode\*> stdair::NestingNodeMap\_T**

Define the fare family map.

Definition at line 23 of file [NestingNodeTypes.hpp](#).

**31.5.2.73 typedef std::list<OnDDate\*> stdair::OnDDateList\_T**

Define the O&D date list.

Definition at line 19 of file [OnDDateTypes.hpp](#).

**31.5.2.74 typedef std::map<const MapKey\_T, OnDDate\*> stdair::OnDDateMap\_T**

Define the OnD date map.

Definition at line 25 of file [OnDDateTypes.hpp](#).

**31.5.2.75 typedef std::pair<std::string, YieldDemandPair\_T> stdair::StringDemandStructPair\_T**

Define the yield mean and standard deviation for a certain cabin/class path. This map is mandatory when using the default BOM tree. This map can be empty if yields are charged otherwise (input file, ...)

Definition at line 32 of file [OnDDateTypes.hpp](#).

**31.5.2.76 typedef std::map<std::string, YieldDemandPair\_T> stdair::StringDemandStructMap\_T**

Definition at line 33 of file [OnDDateTypes.hpp](#).

**31.5.2.77 typedef std::map<std::string, CabinClassPairList\_T>  
stdair::StringCabinClassPairListMap\_T**

Define the string matching a (cabin,class) path. (i.e, the string is "Y:M;" for a one leg O&D with the cabin Y and the class M; the string is "Y:M;Y:Y;" for a two legs O&D with the cabin Y and the class M for the first leg, and the cabin Y and the class Y for the second leg).

Definition at line 41 of file [OnDDateTypes.hpp](#).

**31.5.2.78 typedef std::pair<std::string, CabinClassPairList\_T> stdair::StringCabinClassPair\_T**

Definition at line 42 of file [OnDDateTypes.hpp](#).

**31.5.2.79 typedef std::map<CabinCode\_T, WTPDemandPair\_T> stdair::CabinForecastMap\_T**

Define the WTP mean and standard deviation for a certain cabin code. This information is needed to forecast O&D demand per cabin.

Definition at line 48 of file [OnDDateTypes.hpp](#).

**31.5.2.80 typedef std::pair<CabinCode\_T, WTPDemandPair\_T> stdair::CabinForecastPair\_T**

Definition at line 49 of file [OnDDateTypes.hpp](#).

**31.5.2.81 typedef boost:: shared\_ptr<OptimisationNotificationStruct>  
stdair::OptimisationNotificationPtr\_T**

Define the smart pointer to a optimisation notification.

Definition at line 14 of file [OptimisationNotificationTypes.hpp](#).

**31.5.2.82 typedef std::list<Policy\*> stdair::PolicyList\_T**

Define the fare family list.

Definition at line 17 of file [PolicyTypes.hpp](#).

**31.5.2.83 typedef std::map<const MapKey\_T, Policy\*> stdair::PolicyMap\_T**

Define the fare family map.

Definition at line 23 of file [PolicyTypes.hpp](#).

**31.5.2.84 typedef std::list<PosChannel\*> stdair::PosChannelList\_T**

Define the fare-point\_of\_sale list.

Definition at line 17 of file [PosChannelTypes.hpp](#).

**31.5.2.85 typedef std::map<const MapKey\_T, PosChannel\*> stdair::PosChannelMap\_T**

Define the fare-point\_of\_sale map.

Definition at line 23 of file [PosChannelTypes.hpp](#).

**31.5.2.86 typedef std::pair<MapKey\_T, PosChannel\*> stdair::PosChannelWithKey\_T**

Define the list of pair<MapKey\_T, PosChannel>.

Definition at line 26 of file [PosChannelTypes.hpp](#).

**31.5.2.87** `typedef std::list<PosChannelWithKey_T> stdair::PosChannelDetailedList_T`

Definition at line 27 of file [PosChannelTypes.hpp](#).

**31.5.2.88** `typedef boost::shared_ptr<RMEventStruct> stdair::RMEventPtr_T`

Define the smart pointer to a RM event .

Definition at line 16 of file [RMEventTypes.hpp](#).

**31.5.2.89** `typedef std::list<RMEventStruct> stdair::RMEventList_T`

Define the list of RM events.

Definition at line 23 of file [RMEventTypes.hpp](#).

**31.5.2.90** `typedef std::list<SegmentCabin*> stdair::SegmentCabinList_T`

Define the segment-cabin list.

Definition at line 17 of file [SegmentCabinTypes.hpp](#).

**31.5.2.91** `typedef std::map<const MapKey_T, SegmentCabin*> stdair::SegmentCabinMap_T`

Define the segment-cabin map.

Definition at line 23 of file [SegmentCabinTypes.hpp](#).

**31.5.2.92** `typedef std::list<std::string> stdair::RoutingLegKeyList_T`

Definition at line 27 of file [SegmentDate.hpp](#).

**31.5.2.93** `typedef std::list<SegmentDate*> stdair::SegmentDateList_T`

Define the segment-date list.

Definition at line 17 of file [SegmentDateTypes.hpp](#).

**31.5.2.94** `typedef std::map<const MapKey_T, SegmentDate*> stdair::SegmentDateMap_T`

Define the segment-date map.

Definition at line 23 of file [SegmentDateTypes.hpp](#).

**31.5.2.95** `typedef std::list<SegmentPeriod*> stdair::SegmentPeriodList_T`

Define the segment-period list.

Definition at line 17 of file [SegmentPeriodTypes.hpp](#).

**31.5.2.96** `typedef std::map<const MapKey_T, SegmentPeriod*> stdair::SegmentPeriodMap_T`

Define the segment-period map.

Definition at line 23 of file [SegmentPeriodTypes.hpp](#).

**31.5.2.97** `typedef std::pair<MapKey_T, SegmentPeriod*> stdair::SegmentPeriodWithKey_T`

Define the list of pair<MapKey\_T, SegmentPeriod>.

Definition at line 26 of file [SegmentPeriodTypes.hpp](#).

**31.5.2.98** `typedef std::list<SegmentPeriodWithKey_T> stdair::SegmentPeriodDetailedList_T`

Definition at line 27 of file [SegmentPeriodTypes.hpp](#).

**31.5.2.99** `typedef std::list<SegmentSnapshotTable*> stdair::SegmentSnapshotTableList_T`

Define the guillotine-block list.

Definition at line 20 of file [SegmentSnapshotTableTypes.hpp](#).

**31.5.2.100** `typedef std::map<const MapKey_T, SegmentSnapshotTable*>  
stdair::SegmentSnapshotTableMap_T`

Define the guillotine-block map.

Definition at line 27 of file [SegmentSnapshotTableTypes.hpp](#).

**31.5.2.101** `typedef std::map<const SegmentCabin*, SegmentDataID_T>  
stdair::SegmentCabinIndexMap_T`

Define the map between the segment-cabins and the segment data ID.

Definition at line 30 of file [SegmentSnapshotTableTypes.hpp](#).

**31.5.2.102** `typedef std::map<const MapKey_T, ClassIndex_T> stdair::ClassIndexMap_T`

Define the map between the class and their index.

Definition at line 33 of file [SegmentSnapshotTableTypes.hpp](#).

**31.5.2.103** `typedef std::list<SimpleNestingStructure*> stdair::SimpleNestingStructureList_T`

Define the fare family list.

Definition at line 17 of file [SimpleNestingStructureTypes.hpp](#).

**31.5.2.104** `typedef std::map<const MapKey_T, SimpleNestingStructure*>  
stdair::SimpleNestingStructureMap_T`

Define the fare family map.

Definition at line 23 of file [SimpleNestingStructureTypes.hpp](#).

**31.5.2.105** `typedef boost::shared_ptr<SnapshotStruct> stdair::SnapshotPtr_T`

Define the smart pointer to a snapshot .

Definition at line 14 of file [SnapshotTypes.hpp](#).

**31.5.2.106** `typedef std::list<TimePeriod*> stdair::TimePeriodList_T`

Define the time-period list.

Definition at line 17 of file [TimePeriodTypes.hpp](#).

**31.5.2.107** `typedef std::map<const MapKey_T, TimePeriod*> stdair::TimePeriodMap_T`

Define the time-period map.

Definition at line 23 of file [TimePeriodTypes.hpp](#).

**31.5.2.108** `typedef std::pair<MapKey_T, TimePeriod*> stdair::TimePeriodWithKey_T`

Define the list of pair<MapKey\_T, TimePeriod>.

Definition at line 26 of file [TimePeriodTypes.hpp](#).

**31.5.2.109** `typedef std::list<TimePeriodWithKey_T> stdair::TimePeriodDetailedList_T`

Definition at line 27 of file [TimePeriodTypes.hpp](#).

**31.5.2.110** `typedef std::list<TravelSolutionStruct> stdair::TravelSolutionList_T`

Define the booking class list.

Definition at line 20 of file [TravelSolutionTypes.hpp](#).

**31.5.2.111** `typedef KeyList_T stdair::SegmentPath_T`

Define the segment path key.

Definition at line 26 of file [TravelSolutionTypes.hpp](#).

**31.5.2.112** `typedef std::list<SegmentPath_T> stdair::SegmentPathList_T`

Define the list of segment paths.

Definition at line 29 of file [TravelSolutionTypes.hpp](#).

**31.5.2.113** `typedef std::map<const ClassCode_T, Availability_T> stdair::ClassAvailabilityMap_T`

Define booking class - availability map.

Definition at line 32 of file [TravelSolutionTypes.hpp](#).

**31.5.2.114** `typedef std::list<ClassAvailabilityMap_T> stdair::ClassAvailabilityMapHolder_T`

Define list of booking class - availability maps.

Definition at line 35 of file [TravelSolutionTypes.hpp](#).

**31.5.2.115** `typedef std::map<const ClassCode_T, BookingClassID_T>  
stdair::ClassObjectIDMap_T`

Define booking class - object ID map.

Definition at line 38 of file [TravelSolutionTypes.hpp](#).

**31.5.2.116** `typedef std::list<ClassObjectIDMap_T> stdair::ClassObjectIDMapHolder_T`

Define list of boking class - object ID maps.

Definition at line 41 of file [TravelSolutionTypes.hpp](#).

**31.5.2.117** `typedef std::map<const ClassCode_T, YieldValue_T> stdair::ClassYieldMap_T`

Define booking class - yield map.

Definition at line 44 of file [TravelSolutionTypes.hpp](#).

**31.5.2.118** `typedef std::list<ClassYieldMap_T> stdair::ClassYieldMapHolder_T`

Define list of booking class - yield maps.

Definition at line 47 of file [TravelSolutionTypes.hpp](#).

**31.5.2.119** `typedef std::list<BidPriceVector_T> stdair::BidPriceVectorHolder_T`

Define list of bid price vectors.

Definition at line 50 of file [TravelSolutionTypes.hpp](#).

**31.5.2.120** `typedef std::map<const ClassCode_T, const BidPriceVector_T*>  
stdair::ClassBpvMap_T`

Define booking class - bid price reference map.

Definition at line 53 of file [TravelSolutionTypes.hpp](#).

**31.5.2.121** `typedef std::list<ClassBpvMap_T> stdair::ClassBpvMapHolder_T`

Define list of booking class - bid price reference maps.

Definition at line 56 of file [TravelSolutionTypes.hpp](#).

**31.5.2.122** `typedef std::list<VirtualClassStruct> stdair::VirtualClassList_T`

Define the booking class list.

Definition at line 17 of file [VirtualClassTypes.hpp](#).

**31.5.2.123** `typedef std::map<const YieldLevel_T, VirtualClassStruct>  
stdair::VirtualClassMap_T`

Define the booking class map.

Definition at line 23 of file [VirtualClassTypes.hpp](#).

**31.5.2.124** `typedef std::list<YieldFeatures*> stdair::YieldFeaturesList_T`

Define the date-period list.

Definition at line 17 of file [YieldFeaturesTypes.hpp](#).

**31.5.2.125** `typedef std::map<const MapKey_T, YieldFeatures*> stdair::YieldFeaturesMap_T`

Define the date-period map.

Definition at line 23 of file [YieldFeaturesTypes.hpp](#).

**31.5.2.126** `typedef std::pair<MapKey_T, YieldFeatures*> stdair::YieldFeaturesWithKey_T`

Define the list of pair<MapKey\_T, YieldFeatures\*>.

Definition at line 26 of file [YieldFeaturesTypes.hpp](#).

**31.5.2.127** `typedef std::list<YieldFeaturesWithKey_T> stdair::YieldFeaturesDetailedList_T`

Definition at line 27 of file [YieldFeaturesTypes.hpp](#).

**31.5.2.128** `typedef std::list<YieldStore*> stdair::YieldStoreList_T`

Define the [Inventory](#) list.

Definition at line 17 of file [YieldStoreTypes.hpp](#).

**31.5.2.129** `typedef std::map<const MapKey_T, YieldStore*> stdair::YieldStoreMap_T`

Define the [Inventory](#) map.

Definition at line 23 of file [YieldStoreTypes.hpp](#).

#### 31.5.2.130 typedef std::string stdair::LocationCode\_T

Location code (3-letter-code, e.g., LON).

Definition at line 16 of file [stdair\\_basic\\_types.hpp](#).

#### 31.5.2.131 typedef unsigned long int stdair::Distance\_T

Define a distance (kilometers).

Definition at line 19 of file [stdair\\_basic\\_types.hpp](#).

#### 31.5.2.132 typedef LocationCode\_T stdair::AirportCode\_T

Define the Airport Code type (3-letter-code, e.g., LHR).

Definition at line 22 of file [stdair\\_basic\\_types.hpp](#).

#### 31.5.2.133 typedef LocationCode\_T stdair::CityCode\_T

City code

Definition at line 25 of file [stdair\\_basic\\_types.hpp](#).

#### 31.5.2.134 typedef std::string stdair::KeyDescription\_T

Define the key description.

Definition at line 28 of file [stdair\\_basic\\_types.hpp](#).

#### 31.5.2.135 typedef std::string stdair::AirlineCode\_T

Define the Airline Code type (2-letter-code, e.g., BA).

Definition at line 31 of file [stdair\\_basic\\_types.hpp](#).

#### 31.5.2.136 typedef unsigned short stdair::FlightNumber\_T

Define the type for flight numbers.

Definition at line 34 of file [stdair\\_basic\\_types.hpp](#).

#### 31.5.2.137 typedef unsigned short stdair::TableID\_T

Define the type for data table numbers.

Definition at line 37 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.138 typedef std::string stdair::CabinCode\_T**

Define the cabin code (class of service, e.g., first, business, economy).

Definition at line 41 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.139 typedef std::string stdair::FamilyCode\_T**

Define the code of the fare family (e.g., 1, 2, 3, etc.).

Definition at line 44 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.140 typedef std::string stdair::PolicyCode\_T**

Define the code of the policy (e.g., 1, 2, 3, etc.).

Definition at line 47 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.141 typedef std::string stdair::NestingStructureCode\_T**

Define the code of the nesting structure (e.g., "default").

Definition at line 50 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.142 typedef std::string stdair::NestingNodeCode\_T**

Define the code of the nesting node (e.g., 1, 2, 3, etc.).

Definition at line 53 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.143 typedef std::string stdair::ClassCode\_T**

Define the booking class code (product segment class, e.g., H, B, K, etc.).

Definition at line 57 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.144 typedef unsigned long stdair::Identity\_T**

Define a identity number.

Definition at line 60 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.145 typedef std::string stdair::TripType\_T**

Type of trip type (RO=outbound of round-trip, RI=inbound of round-trip, OW=one way).

Definition at line 64 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.146 typedef double stdair::MonetaryValue\_T**

Monetary value

Definition at line 67 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.147 typedef double stdair::RealNumber\_T**

Real number

Definition at line 70 of file [stdair\\_basic\\_types.hpp](#).**31.5.2.148 typedef double stdair::Percentage\_T**

Define a percentage value (between 0 and 100%).

Definition at line 73 of file [stdair\\_basic\\_types.hpp](#).**31.5.2.149 typedef double stdair::PriceValue\_T**

Define a price value (e.g., 1000.0 Euros).

Definition at line 76 of file [stdair\\_basic\\_types.hpp](#).**31.5.2.150 typedef double stdair::YieldValue\_T**

Define a yield value (e.g., 1000.0 Euros).

Definition at line 79 of file [stdair\\_basic\\_types.hpp](#).**31.5.2.151 typedef std::string stdair::PriceCurrency\_T**

Define a price currency (e.g., EUR for Euros).

Definition at line 82 of file [stdair\\_basic\\_types.hpp](#).**31.5.2.152 typedef double stdair::Revenue\_T**

Define an amount of revenue.

Define the revenue of a policy

Definition at line 85 of file [stdair\\_basic\\_types.hpp](#).**31.5.2.153 typedef double stdair::Multiplier\_T**

Define the name of a multiplier.

Definition at line 88 of file [stdair\\_basic\\_types.hpp](#).**31.5.2.154 typedef double stdair::NbOfSeats\_T**

Define the number of seats (it can be non integer, because the overbooking can be applied at booking class or PNR level).

Definition at line 92 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.155 typedef unsigned int stdair::Count\_T**

Count

Definition at line 95 of file [stdair\\_basic\\_types.hpp](#).**31.5.2.156 typedef short stdair::PartySize\_T**

Number of passengers (in a group) for a booking.

Definition at line 98 of file [stdair\\_basic\\_types.hpp](#).**31.5.2.157 typedef double stdair::NbOfRequests\_T**

Define a number of requests.

Definition at line 101 of file [stdair\\_basic\\_types.hpp](#).**31.5.2.158 typedef NbOfRequests\_T stdair::NbOfBookings\_T**

Define a number of bookings.

Definition at line 104 of file [stdair\\_basic\\_types.hpp](#).**31.5.2.159 typedef NbOfRequests\_T stdair::NbOfCancellations\_T**

Define a number of cancellations.

Define a number of cancellations (travellers).

Definition at line 107 of file [stdair\\_basic\\_types.hpp](#).**31.5.2.160 typedef unsigned short stdair::NbOfTravelSolutions\_T**

Define a number of travel solutions (in a travel solution block).

Definition at line 111 of file [stdair\\_basic\\_types.hpp](#).**31.5.2.161 typedef std::string stdair::ClassList\_String\_T**

Define the list of class codes as a string.

Definition at line 114 of file [stdair\\_basic\\_types.hpp](#).**31.5.2.162 typedef unsigned short stdair::NbOfSegments\_T**

Define a number of segment-dates (in a path).

Definition at line 117 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.163 typedef unsigned short stdair::NbOfAirlines\_T**

Define a number of airlines (in a path).

Definition at line 120 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.164 typedef double stdair::Availability\_T**

Define an availability.

Definition at line 123 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.165 typedef double stdair::Fare\_T**

Define the price of a travel solution.

Definition at line 126 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.166 typedef bool stdair::Flag\_T**

Define the censorship flag.

Definition at line 129 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.167 typedef unsigned int stdair::UnsignedIndex\_T**

Define the unsigned index type.

Definition at line 132 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.168 typedef unsigned int stdair::NbOfClasses\_T**

Define the number of booking classes.

Definition at line 135 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.169 typedef unsigned int stdair::NbOfFareFamilies\_T**

Define the number of fare families.

Definition at line 138 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.170 typedef std::string stdair::Filename\_T**

File or directory name.

It may contain paths, relative or absolute (e.g., /foo/bar or C:).

Definition at line 144 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.171 typedef std::string stdair::FileAddress\_T**

Define the file address type (e.g. "a\_directory/a\_filename").

NOTE: That type should be deprecated.

Definition at line 148 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.172 typedef float stdair::ProgressPercentage\_T**

Progress status (usually, a percentage expressed as a floating point number).

Definition at line 152 of file [stdair\\_basic\\_types.hpp](#).

**31.5.2.173 typedef boost::posix\_time::time\_duration stdair::Duration\_T**

Define the type for durations (e.g., elapsed in-flight time).

Definition at line 17 of file [stdair\\_date\\_time\\_types.hpp](#).

**31.5.2.174 typedef boost::gregorian::date stdair::Date\_T**

Define the type for date (e.g., departure date of a flight).

Definition at line 20 of file [stdair\\_date\\_time\\_types.hpp](#).

**31.5.2.175 typedef boost::posix\_time::time\_duration stdair::Time\_T**

Time

Definition at line 23 of file [stdair\\_date\\_time\\_types.hpp](#).

**31.5.2.176 typedef boost::posix\_time::ptime stdair::DateTime\_T**

Define an accurate time (date+time).

Definition at line 26 of file [stdair\\_date\\_time\\_types.hpp](#).

**31.5.2.177 typedef boost::gregorian::date\_period stdair::DatePeriod\_T**

Define the Period (e.g., period during which flights depart).

Definition at line 29 of file [stdair\\_date\\_time\\_types.hpp](#).

**31.5.2.178 typedef std::string stdair::DOW\_String\_T**

Define the Day-Of-the-Week as a string.

Definition at line 32 of file [stdair\\_date\\_time\\_types.hpp](#).

**31.5.2.179 typedef boost::gregorian::date\_duration stdair::DateOffset\_T**

Define the Date Offset (e.g., -1 ).

Definition at line 35 of file [stdair\\_date\\_time\\_types.hpp](#).

**31.5.2.180 typedef int stdair::DayDuration\_T**

Define a duration in number of days.

Definition at line 38 of file [stdair\\_date\\_time\\_types.hpp](#).

**31.5.2.181 typedef bool stdair::SaturdayStay\_T**

Define the Saturday stay status of a travel.

Define the saturday stay of a tickets.

Definition at line 41 of file [stdair\\_date\\_time\\_types.hpp](#).

**31.5.2.182 typedef long int stdair::IntDuration\_T**

Time duration in (integer) number of seconds

Definition at line 44 of file [stdair\\_date\\_time\\_types.hpp](#).

**31.5.2.183 typedef long long int stdair::LongDuration\_T**

Time duration in (unsigned long long integer) number of milliseconds

Definition at line 47 of file [stdair\\_date\\_time\\_types.hpp](#).

**31.5.2.184 typedef float stdair::FloatDuration\_T**

Duration in (float) number of time units

Definition at line 50 of file [stdair\\_date\\_time\\_types.hpp](#).

**31.5.2.185 typedef soci::session stdair::DBSession\_T**

Database session handler.

Definition at line 20 of file [stdair\\_db.hpp](#).

**31.5.2.186 typedef soci::statement stdair::DBRequestStatement\_T**

Database request statement handler.

Definition at line 23 of file [stdair\\_db.hpp](#).

**31.5.2.187 typedef std::string stdair::DBConnectionName\_T**

Define the name of an database connection.

Definition at line 26 of file [stdair\\_db.hpp](#).

**31.5.2.188 typedef bool stdair::ChangeFees\_T**

Define the availability option allowing the ticket change.

Definition at line 29 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.189 typedef bool stdair::NonRefundable\_T**

Define the refundable availability of a tickets.

Definition at line 32 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.190 typedef double stdair::SaturdayStayRatio\_T**

Define the average ratio (between 0 and 100 percent) of demand with a saturday stay status equal to TRUE.

Definition at line 39 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.191 typedef double stdair::ChangeFeesRatio\_T**

Define the average ratio of demand with change fee availability.

Definition at line 43 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.192 typedef double stdair::NonRefundableRatio\_T**

Define the average ratio of demand with non-refundable availability.

Definition at line 47 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.193 typedef double stdair::Disutility\_T**

Define the disutility of restriction.

Definition at line 50 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.194 typedef std::string stdair::PassengerType\_T**

Define the passenger characteristics, leisure or business for instance (1-letter-code, e.g., L or B).

Definition at line 54 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.195 typedef std::string stdair::DistributionPatternId\_T**

Define the identifier of a distribution pattern (e.g., 1).

Definition at line 57 of file [stdair\\_demand\\_types.hpp](#).

#### 31.5.2.196 `typedef std::string stdair::CancellationRateCurveId_T`

Define the identifier of a cancellation rate curve (e.g., C1).

Definition at line 60 of file [stdair\\_demand\\_types.hpp](#).

#### 31.5.2.197 `typedef std::string stdair::AirlinePreferenceId_T`

Define the identifier of an airline preference set list (e.g., AP1).

Definition at line 63 of file [stdair\\_demand\\_types.hpp](#).

#### 31.5.2.198 `typedef std::pair<Percentage_T, Percentage_T> stdair::CancellationNoShowRatePair_T`

Define a cancellation & and no-show rate pair.

Definition at line 66 of file [stdair\\_demand\\_types.hpp](#).

#### 31.5.2.199 `typedef std::string stdair::CharacteristicsPatternId_T`

Define the identifier of a demand characteristics pattern (e.g. Ch12); for a customer choice model

Definition at line 70 of file [stdair\\_demand\\_types.hpp](#).

#### 31.5.2.200 `typedef std::string stdair::CharacteristicsIndex_T`

Define characteristics component index (e.g. W for WTP)

Definition at line 73 of file [stdair\\_demand\\_types.hpp](#).

#### 31.5.2.201 `typedef double stdair::WTP_T`

Define a Willingness-To-Pay (WTP) (e.g., 1000.0 Euros).

Definition at line 76 of file [stdair\\_demand\\_types.hpp](#).

#### 31.5.2.202 `typedef boost::tuples::tuple<double, WTP_T> stdair::CharacteristicsWTP_tuple_T`

Define the name of a WTP-component of characteristics pattern.

Definition at line 79 of file [stdair\\_demand\\_types.hpp](#).

#### 31.5.2.203 `typedef std::pair<WTP_T, MeanStdDevPair_T> stdair::WTPDemandPair_T`

Define the <WTP, demand> pair type.

Definition at line 82 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.204 typedef NbOfRequests\_T stdair::NbOfNoShows\_T**

Define a number of no-shows.

Definition at line 88 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.205 typedef double stdair::MatchingIndicator\_T**

Define a indicator of demand to class matching.

Definition at line 91 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.206 typedef std::string stdair::DemandStreamKeyStr\_T**

Type definition for the hashed key of the DemandStreamKey object.

Definition at line 94 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.207 typedef std::string stdair::ChannelLabel\_T**

Type of booking channel (D=direct, I=indirect, N=oNline, F=oFfline).

Definition at line 97 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.208 typedef std::string stdair::FrequentFlyer\_T**

Type of frequent flyer (P=Platinum, G=Gold, S=Silver, M=Member, N=None).

Definition at line 100 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.209 typedef std::string stdair::RequestStatus\_T**

Define the Request status for booking (1-letter-code, e.g., B: booked, C: cancelled, R: Rejected).

Definition at line 104 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.210 typedef std::map<Identity\_T, Identity\_T> stdair::BookingTSIDMap\_T**

Define a map between a BookingID and a TravelSolutionID.

Definition at line 107 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.211 typedef std::pair<CabinCode\_T, ClassCode\_T> stdair::CabinClassPair\_T**

Define a pair (cabin code, class code) e.g., (economy, K).

Definition at line 110 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.212 typedef std::list<CabinClassPair\_T> stdair::CabinClassPairList\_T**

Define a list of pair (cabin code, class code).

Definition at line 113 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.213 typedef double stdair::ProportionFactor\_T**

Define the forecast booking requests proportion.

Definition at line 116 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.214 typedef std::list<ProportionFactor\_T> stdair::ProportionFactorList\_T**

Define the list of forecast booking requests proportions.

Definition at line 119 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.215 typedef std::string stdair::OnDString\_T**

Define the O&D string key (e.g. "SQ;11,2010-Feb-08;SIN,BKK").

Definition at line 122 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.216 typedef std::list<OnDString\_T> stdair::OnDStringList\_T**

Define the list of O&D string key.

Definition at line 125 of file [stdair\\_demand\\_types.hpp](#).

**31.5.2.217 typedef std::string stdair::EventName\_T**

Define the name of an event.

Definition at line 14 of file [stdair\\_event\\_types.hpp](#).

**31.5.2.218 typedef double stdair::NbOfEvents\_T**

Define a number of events.

Definition at line 17 of file [stdair\\_event\\_types.hpp](#).

**31.5.2.219 typedef std::string stdair::EventGeneratorKey\_T**

Define a key string of an event generator.

Definition at line 20 of file [stdair\\_event\\_types.hpp](#).

**31.5.2.220 typedef double stdair::NbOfFareRules\_T**

Define a number of fare rules.

Definition at line 12 of file [stdair\\_fare\\_types.hpp](#).

**31.5.2.221 typedef std::string stdair::NetworkID\_T**

Define the type for network ID.

Definition at line 23 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.222 typedef std::vector<AirlineCode\_T> stdair::AirlineCodeList\_T**

Define a list of airline code.

Definition at line 26 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.223 typedef std::vector<ClassList\_String\_T> stdair::ClassList\_StringList\_T**

Define the list of list of class codes as a string.

Definition at line 29 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.224 typedef std::vector<ClassCode\_T> stdair::ClassCodeList\_T**

Define a list of class code.

Definition at line 32 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.225 typedef unsigned short stdair::SubclassCode\_T**

Define the sub-class code (e.g., 0, 1, 2, etc.). The subclass is a sub-structure for the booking class, allowing to have specific rules for some criteria like POS.

Definition at line 37 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.226 typedef std::string stdair::FlightPathCode\_T**

Define the flight path code (code made by a suite of flight numbers).

Definition at line 40 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.227 typedef std::map<CabinCode\_T, ClassList\_String\_T>  
stdair::CabinBookingClassMap\_T**

Map between the cabin codes and the booking class codes within each cabin.

Definition at line 44 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.228 typedef std::string stdair::CurveKey\_T**

Curve key for FRAT5 or FF Disutility.

Definition at line 47 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.229 typedef double stdair::CabinCapacity\_T**

Define the cabin capacity (resource, e.g., 200 seats).

The capacity is expressed as a double to cope with overbooking.

Definition at line 51 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.230 typedef double stdair::NbOffFlightDates\_T**

Define a number of flight dates.

Definition at line 54 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.231 typedef double stdair::CommittedSpace\_T**

Define the committed space of a cabin.

Definition at line 57 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.232 typedef double stdair::UPR\_T**

Define the unsold protection (UPR).

Definition at line 60 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.233 typedef double stdair::BookingLimit\_T**

Define the value of the booking limit.

Define the Booking Limit.

It is a double, as it allows for overbooking.

Definition at line 63 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.234 typedef double stdair::AuthorizationLevel\_T**

Define the value of the authorization level.

Definition at line 66 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.235 typedef double stdair::CapacityAdjustment\_T**

Define the value of the adjustment for cabin capacity.

Definition at line 69 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.236 typedef double stdair::BlockSpace\_T**

Define the number of seat which could not be used for the booking.

Definition at line 72 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.237 typedef bool stdair::AvailabilityStatus\_T**

Define an availability status (AVS).

Definition at line 75 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.238 typedef std::vector<Availability\_T> stdair::BucketAvailabilities\_T**

Define a list of availabilities.

Definition at line 78 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.239 typedef double stdair::NbOfYields\_T**

Define a number of yields.

Definition at line 81 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.240 typedef double stdair::NbOfInventoryControlRules\_T**

Define a number of InventoryControlRules.

Definition at line 84 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.241 typedef bool stdair::CensorshipFlag\_T**

Define availability of booking limit.

Definition at line 87 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.242 typedef short stdair::DTD\_T**

Define the type of day-to-departure.

Definition at line 90 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.243 typedef short stdair::DCP\_T**

Define the type of data collection point.

Definition at line 93 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.244 typedef std::list<DCP\_T> stdair::DCPList\_T**

Define the type of data collection point list.

Definition at line 96 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.245 typedef std::map<DTD\_T, RealNumber\_T> stdair::DTDFratMap\_T**

Define the DTD (days to departure) frat5 coef map.

Definition at line 99 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.246 typedef std::map<FloatDuration\_T, float> stdair::DTDProbMap\_T**

Define the DTD (days to departure) probability map.

Definition at line 102 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.247 typedef std::vector<CensorshipFlag\_T> stdair::CensorshipFlagList\_T**

Define the list of censorship flags (une list per booking class, one censorship flag per DCP).

Definition at line 106 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.248 typedef double stdair::BookingRatio\_T**

Define the bookingRatio (for instance OnD bookings over whole class bookings).

Definition at line 110 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.249 typedef double stdair::Yield\_T**

Define the yield of a virtual class.

Definition at line 113 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.250 typedef unsigned int stdair::YieldLevel\_T**

Define the yield level (yield as an integer).

Definition at line 116 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.251 typedef std::map<YieldLevel\_T, MeanStdDevPair\_T>  
stdair::YieldLevelDemandMap\_T**

Define the <YieldLevel, demand> demand map.

Definition at line 119 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.252 typedef std::pair<Yield\_T, MeanStdDevPair\_T> stdair::YieldDemandPair\_T**

Define the <Yield, demand> pair type.

Definition at line 122 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.253 typedef double stdair::BidPrice\_T**

Define the Bid-Price.

Definition at line 125 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.254 typedef std::vector<BidPrice\_T> stdair::BidPriceVector\_T**

Define a Bid-Price Vector.

Definition at line 128 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.255 typedef unsigned int stdair::SeatIndex\_T**

Define the current index of a Bid-Price Vector (for a given [LegCabin](#)).

Definition at line 131 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.256** `typedef std::string stdair::ControlMode_T`

Mode of inventory control.

Definition at line 134 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.257** `typedef double stdair::OverbookingRate_T`

Define the rate of overbooking

Definition at line 137 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.258** `typedef double stdair::ProtectionLevel_T`

Define the Protection Level.

It is a double, as it allows for overbooking.

Definition at line 145 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.259** `typedef std::vector<double> stdair::EmsrValueList_T`

Define the list of EMSR values for the EMSR algorithm.

Definition at line 148 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.260** `typedef std::vector<double> stdair::BookingLimitVector_T`

Define the vector of booking limits.

It is a vector of double.

Definition at line 152 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.261** `typedef std::vector<double> stdair::ProtectionLevelVector_T`

Define the vector of protection levels.

It is a vector of double.

Definition at line 156 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.262** `typedef boost::multi_array<double, 2> stdair::SnapshotBlock_T`

Define a snapshot block.

Definition at line 159 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.263** `typedef SnapshotBlock_T::index_range stdair::SnapshotBlockRange_T`

Define a range for array view.

Definition at line 162 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.264** `typedef SnapshotBlock_T::array_view<1>::type  
stdair::SegmentCabinDTDSnapshotView_T`

Define a view for a given DTD.

Definition at line 165 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.265** `typedef SnapshotBlock_T::array_view<2>::type  
stdair::SegmentCabinDTDRangeSnapshotView_T`

Define a view for a given range of DTD.

Definition at line 168 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.266** `typedef SnapshotBlock_T::const_array_view<1>::type  
stdair::ConstSegmentCabinDTDSnapshotView_T`

Define a const view for a given DTD.

Definition at line 171 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.267** `typedef SnapshotBlock_T::const_array_view<2>::type  
stdair::ConstSegmentCabinDTDRangeSnapshotView_T`

Define a const view for a given range of DTD.

Definition at line 174 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.268** `typedef unsigned short stdair::SegmentDataID_T`

Define the segment ID within a snapshot data table.

Definition at line 177 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.269** `typedef unsigned short stdair::LegDataID_T`

Define the leg ID within a snapshot data table.

Definition at line 180 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.270** `typedef unsigned short stdair::ClassIndex_T`

Define the index type of a class within a snapshot block of a leg/segment.

Definition at line 184 of file [stdair\\_inventory\\_types.hpp](#).

**31.5.2.271** `typedef unsigned int stdair::ReplicationNumber_T`

Define the replication number.

Definition at line 24 of file [stdair\\_maths\\_types.hpp](#).

#### 31.5.2.272 `typedef unsigned long int stdair::ExponentialSeed_T`

Define the seed type of an Exponential function.

Definition at line 29 of file [stdair\\_maths\\_types.hpp](#).

#### 31.5.2.273 `typedef unsigned long int stdair::UniformSeed_T`

Define the seed type of an Uniform function.

Definition at line 34 of file [stdair\\_maths\\_types.hpp](#).

#### 31.5.2.274 `typedef unsigned long int stdair::RandomSeed_T`

Seed for the random generation, so that it can be reproducible.

Definition at line 39 of file [stdair\\_maths\\_types.hpp](#).

#### 31.5.2.275 `typedef boost::minstd_rand stdair::BaseGenerator_T`

Random number generator.

Definition at line 44 of file [stdair\\_maths\\_types.hpp](#).

#### 31.5.2.276 `typedef boost::uniform_real stdair::UniformDistribution_T`

Uniform distribution of real numbers (by default, double).

Definition at line 49 of file [stdair\\_maths\\_types.hpp](#).

#### 31.5.2.277 `typedef boost::variate_generator<BaseGenerator_T&, UniformDistribution_T> stdair::UniformGenerator_T`

Uniform random generator.

Definition at line 55 of file [stdair\\_maths\\_types.hpp](#).

#### 31.5.2.278 `typedef boost::normal_distribution stdair::NormalDistribution_T`

Normal distribution of real numbers (by default, double).

Definition at line 60 of file [stdair\\_maths\\_types.hpp](#).

#### 31.5.2.279 `typedef boost::variate_generator<BaseGenerator_T&, NormalDistribution_T> stdair::NormalGenerator_T`

Normal random generator.

Definition at line 66 of file [stdair\\_maths\\_types.hpp](#).

**31.5.2.280** `typedef boost::exponential_distribution stdair::ExponentialDistribution_T`

Type definiton for the exponential distribution (characteristics).

Definition at line 69 of file [stdair\\_maths\\_types.hpp](#).

**31.5.2.281** `typedef boost::variate_generator<BaseGenerator_T&, ExponentialDistribution_T>  
stdair::ExponentialGenerator_T`

Type definition for the exponential distribution random generator.

Definition at line 74 of file [stdair\\_maths\\_types.hpp](#).

**31.5.2.282** `typedef double stdair::MeanValue_T`

Define a mean value (e.g., 20.2).

Definition at line 79 of file [stdair\\_maths\\_types.hpp](#).

**31.5.2.283** `typedef double stdair::StdDevValue_T`

Define a standard deviation value (e.g., 1.5).

Definition at line 84 of file [stdair\\_maths\\_types.hpp](#).

**31.5.2.284** `typedef std::pair<MeanValue_T, StdDevValue_T> stdair::MeanStdDevPair_T`

Define a couple (mean, standart deviation) (e.g., (20.2,1.5)).

Definition at line 89 of file [stdair\\_maths\\_types.hpp](#).

**31.5.2.285** `typedef std::vector<MeanStdDevPair_T> stdair::MeanStdDevPairVector_T`

Define a vector of couple (mean, standart deviation)

Definition at line 94 of file [stdair\\_maths\\_types.hpp](#).

**31.5.2.286** `typedef float stdair::Probability_T`

Probability.

Definition at line 99 of file [stdair\\_maths\\_types.hpp](#).

**31.5.2.287** `typedef std::string stdair::ForecasterMode_T`

Mode of the forecaster.

Definition at line 17 of file [stdair\\_rm\\_types.hpp](#).

**31.5.2.288** `typedef short stdair::HistoricalDataLimit_T`

Limit of similar flight-dates used in the forecaster.

Definition at line 24 of file [stdair\\_rm\\_types.hpp](#).

#### 31.5.2.289 `typedef std::string stdair::OptimizerMode_T`

Mode of the forecaster.

Definition at line 27 of file [stdair\\_rm\\_types.hpp](#).

#### 31.5.2.290 `typedef NbOfBookings_T stdair::PolicyDemand_T`

Define the demand for a policy.

Definition at line 30 of file [stdair\\_rm\\_types.hpp](#).

#### 31.5.2.291 `typedef std::vector<double> stdair::GeneratedDemandVector_T`

Define the vector of generated demand (for MC integration use).

It is a vector of double.

Definition at line 34 of file [stdair\\_rm\\_types.hpp](#).

#### 31.5.2.292 `typedef std::vector<GeneratedDemandVector_T> stdair::GeneratedDemandVectorHolder_T`

Define the holder of the generated demand vectors.

Definition at line 37 of file [stdair\\_rm\\_types.hpp](#).

#### 31.5.2.293 `typedef double stdair::SellupProbability_T`

Define the sellup probability.

Definition at line 40 of file [stdair\\_rm\\_types.hpp](#).

#### 31.5.2.294 `typedef std::vector<NbOfRequests_T> stdair::UncDemVector_T`

Define the vector of historical unconstrained demand.

Definition at line 43 of file [stdair\\_rm\\_types.hpp](#).

#### 31.5.2.295 `typedef std::vector<NbOfBookings_T> stdair::BookingVector_T`

Define the vector of historical bookings.

Definition at line 46 of file [stdair\\_rm\\_types.hpp](#).

#### 31.5.2.296 `typedef double stdair::FRAT5_T`

Define the FRAT5 coefficient.

Definition at line 49 of file [stdair\\_rm\\_types.hpp](#).

**31.5.2.297** `typedef std::map<const DTD_T, FRAT5_T> stdair::FRAT5Curve_T`

Define the FRAT5 curve.

Definition at line 52 of file [stdair\\_rm\\_types.hpp](#).

**31.5.2.298** `typedef std::map<const DTD_T, double> stdair::FFDisutilityCurve_T`

Define the fare family disutility curve.

Definition at line 55 of file [stdair\\_rm\\_types.hpp](#).

**31.5.2.299** `typedef std::map<const DTD_T, double> stdair::SellUpCurve_T`

Define the sell-up factor curve.

Definition at line 58 of file [stdair\\_rm\\_types.hpp](#).

**31.5.2.300** `typedef std::map<const DTD_T, double> stdair::DispatchingCurve_T`

Define the dispatching factor curve.

Definition at line 61 of file [stdair\\_rm\\_types.hpp](#).

**31.5.2.301** `typedef std::map<BookingClass*, SellUpCurve_T>  
stdair::BookingClassSellUpCurveMap_T`

Define the map between class and sell-up factor curve.

Definition at line 64 of file [stdair\\_rm\\_types.hpp](#).

**31.5.2.302** `typedef std::map<BookingClass*, DispatchingCurve_T>  
stdair::BookingClassDispatchingCurveMap_T`

Define the map between class and dispatching factor curve.

Definition at line 67 of file [stdair\\_rm\\_types.hpp](#).

**31.5.2.303** `typedef std::map<const Yield_T, double> stdair::YieldDemandMap_T`

Define the map between the yield of a class and the demand forecast of this class within a policy.

Definition at line 71 of file [stdair\\_rm\\_types.hpp](#).

**31.5.2.304** `typedef unsigned int stdair::NbOfSamples_T`

Define the number of samples for the generated demand of booking class

Definition at line 77 of file [stdair\\_rm\\_types.hpp](#).

**31.5.2.305** `typedef boost::shared_ptr<STDAIR_Service> stdair::STDAIR_ServicePtr_T`

Pointer on the STDAIR Service handler.

Definition at line 13 of file [stdair\\_service\\_types.hpp](#).

### 31.5.3 Function Documentation

**31.5.3.1** `const std::string stdair::DEFAULT_BOM_ROOT_KEY (" -- ROOT -- ")`

Default value for the BOM tree root key (" -- ROOT -- ").

**31.5.3.2** `const double stdair::DEFAULT_EPSILON_VALUE (0.0001)`

Default very small value.

**31.5.3.3** `const unsigned int stdair::DEFAULT_FLIGHT_SPEED (900)`

Default flight speed (number of kilometers per hour).

**31.5.3.4** `const NbOfFlightDates_T stdair::DEFAULT_NB_OF_FLIGHTDATES (0.0)`

Default number of generated flight dates.

**31.5.3.5** `const Duration_T stdair::NULL_BOOST_TIME_DURATION (-1, -1, -1)`

Null time duration (in boost::time\_duration unit).

**31.5.3.6** `const Duration_T stdair::DEFAULT_NULL_DURATION (0, 0, 0)`

Default null duration (in boost::time\_duration unit).

**31.5.3.7** `const unsigned int stdair::DEFAULT_NB_OF_DAYS_IN_A_YEAR (365)`

Default number of days in a year.

**31.5.3.8** `const unsigned int stdair::DEFAULT_NUMBER_OF_SUBDIVISIONS (1000)`

Higher value per thousand

**31.5.3.9** `const DayDuration_T stdair::DEFAULT_DAY_DURATION (0)`

Default number of duration days.

**31.5.3.10** `const DatePeriod_T stdair::BOOST_DEFAULT_DATE_PERIOD (Date_T(2007, 1, 1), Date_T(2007, 1, 1))`

Default date period (0-length, i.e., it lasts one day).

**31.5.3.11** `const DOW_String_T stdair::DEFAULT_DOW_STRING ("0000000")`

Default DOW String (e.g., "0000000").

**31.5.3.12** `const DateOffset_T stdair::DEFAULT_DATE_OFFSET (0)`

Default Date Offset (e.g., 0).

**31.5.3.13** `const Date_T stdair::DEFAULT_DATE (2010, boost::gregorian::Jan, 1)`

Default date for the General.

**31.5.3.14** `const DateTime_T stdair::DEFAULT_DATETIME (DEFAULT_DATE, NULL_BOOST_TIME_DURATION)`

Default date-time.

**31.5.3.15** `const Duration_T stdair::DEFAULT_EPSILON_DURATION (0, 0, 0, 1)`

Default epsilon duration (1 nanosecond).

**31.5.3.16** `const Count_T stdair::SECONDS_IN_ONE_DAY (86400)`

Number of seconds in one day.

**31.5.3.17** `const Count_T stdair::MILLISECONDS_IN_ONE_SECOND (1000)`

Number of milliseconds in one second

**31.5.3.18** `const RandomSeed_T stdair::DEFAULT_RANDOM_SEED (120765987)`

Default random seed.

**31.5.3.19** `const AirportCode_T stdair::AIRPORT_LHR ("LHR")`

Default origin airport (e.g., "LHR").

**31.5.3.20** `const AirportCode_T stdair::AIRPORT_SYD ("SYD")`

Default destination airport (e.g., "SYD").

**31.5.3.21** `const CityCode_T stdair::POS_LHR ("LHR")`

London city code (e.g., "LHR").

**31.5.3.22** `const Date_T stdair::DATE_20110115 (2011, boost::gregorian::Jan, 15)`

Date.

**31.5.3.23** `const Date_T stdair::DATE_20111231 (2011, boost::gregorian::Dec, 31)`

**31.5.3.24** `const DayDuration_T stdair::NO_ADVANCE_PURCHASE (0)`

Advance purchase 0 day.

**31.5.3.25** `const SaturdayStay_T stdair::SATURDAY_STAY (true)`

Default saturdayStay value (true).

**31.5.3.26** `const SaturdayStay_T stdair::NO_SATURDAY_STAY (false)`

Default saturdayStay value (false).

**31.5.3.27** `const ChangeFees_T stdair::CHANGE_FEES (true)`

Default change fees value (true).

**31.5.3.28** `const ChangeFees_T stdair::NO_CHANGE_FEES (false)`

Default change fees value (false).

**31.5.3.29** `const NonRefundable_T stdair::NON_REFUNDABLE (true)`

Default non refundable value (true).

**31.5.3.30** `const NonRefundable_T stdair::NO_NON_REFUNDABLE (false)`

Default refundable value (false).

**31.5.3.31** `const SaturdayStay_T stdair::DEFAULT_BOM_TREE_SATURDAY_STAY (true)`

Default saturdayStay value (true).

**31.5.3.32** `const ChangeFees_T stdair::DEFAULT_BOM_TREE_CHANGE_FEES (true)`

Default change fees value (true).

**31.5.3.33** `const NonRefundable_T stdair::DEFAULT_BOM_TREE_NON_REFUNDABLE (true)`

Default non refundable value (true).

**31.5.3.34** `const DayDuration_T stdair::NO_STAY_DURATION (0)`

Stay duration 0 day.

**31.5.3.35** `const AirlineCode_T stdair::AIRLINE_CODE_BA ("BA")`

Airline code "BA".

**31.5.3.36** `const CabinCode_T stdair::CABIN_Y ("Y")`

Cabin 'Y'.

**31.5.3.37** `const ClassCode_T stdair::CLASS_CODE_Y ("Y")`

Class code 'Y'.

**31.5.3.38** `const ClassCode_T stdair::CLASS_CODE_Q ("Q")`

Class code 'Q'.

**31.5.3.39** `const AirportCode_T stdair::AIRPORT_SIN ("SIN")`

Singapour airport (e.g., "SIN").

**31.5.3.40** `const AirportCode_T stdair::AIRPORT_BKK ("BKK")`

Bangkok airport (e.g., "BKK").

**31.5.3.41** `const CityCode_T stdair::POS_SIN ("SIN")`

Singapour city code (e.g., "SIN").

**31.5.3.42** `const CabinCode_T stdair::CABIN_ECO ("Eco")`

Economic cabin (e.g., "Eco").

**31.5.3.43** `const FrequentFlyer_T stdair::FREQUENT_FLYER_MEMBER ("M")`

Frequent flyer tier (e.g., "M" meaning member).

**31.5.3.44** `const FamilyCode_T stdair::DEFAULT_FAMILY_CODE ("0")`

Default family code value ("0").

**31.5.3.45** `const PolicyCode_T stdair::DEFAULT_POLICY_CODE ("0")`

Default policy code value ("0").

**31.5.3.46** `const NestingStructureCode_T stdair::DEFAULT_NESTING_STRUCTURE_CODE ("DEFAULT")`

Default Nesting Structure Code ("DEFAULT").

**31.5.3.47** `const NestingStructureCode_T stdair::DISPLAY_NESTING_STRUCTURE_CODE ("Display Nesting")`

Display Nesting Structure Code ("Display Nesting").

**31.5.3.48** `const NestingStructureCode_T stdair::YIELD_BASED_NESTING_STRUCTURE_CODE ("Yield-Based Nesting")`

Display Nesting Structure Code ("Yield-Based Nesting").

**31.5.3.49** `const NestingNodeCode_T stdair::DEFAULT_NESTING_NODE_CODE ("0")`

Default Nesting Node Code ("0").

**31.5.3.50** `const NbofAirlines_T stdair::DEFAULT_NBOFAIRLINES (0)`

Default number of airlines.

**31.5.3.51** `const FlightPathCode_T stdair::DEFAULT_FLIGHTPATH_CODE ("" )`

Default flight-path code value ("").

**31.5.3.52** `const Distance_T stdair::DEFAULT_DISTANCE_VALUE (0)`

Default distance value (kilometers).

**31.5.3.53** `const ClassCode_T stdair::DEFAULT_CLOSED_CLASS_CODE ("CC")`

Default closed class code.

**31.5.3.54 const NbOfBookings\_T stdair::DEFAULT\_CLASS\_NB\_OF\_BOOKINGS (0)**

Default number of bookings (with counted cancellation) for [BookingClass](#).

**31.5.3.55 const NbOfBookings\_T stdair::DEFAULT\_CLASS\_TOTAL\_NB\_OF\_BOOKINGS (0)**

Default number of booking (without cancellation) demands for [BookingClass](#).

**31.5.3.56 const NbOfBookings\_T stdair::DEFAULT\_CLASS\_UNCONSTRAINED\_DEMAND (0)**

Default unconstrained demand for [BookingClass](#).

**31.5.3.57 const NbOfBookings\_T stdair::DEFAULT\_CLASS\_REMAINING\_DEMAND\_MEAN (0)**

Default remaining future demand mean for [BookingClass](#).

**31.5.3.58 const NbOfBookings\_T stdair::DEFAULT\_CLASS\_REMAINING\_DEMAND - STANDARD\_DEVIATION (0)**

Default remaining futre demand standard deviation for [BookingClass](#).

**31.5.3.59 const NbOfCancellations\_T stdair::DEFAULT\_CLASS\_NB\_OF\_CANCELLATIONS (0)**

Default number of cancellations for [BookingClass](#).

**31.5.3.60 const NbOfNoShows\_T stdair::DEFAULT\_CLASS\_NB\_OF\_NOSHOWS (0)**

Default number of no-shows for [BookingClass](#).

**31.5.3.61 const CabinCapacity\_T stdair::DEFAULT\_CABIN\_CAPACITY (100. 0)**

Default cabin capacity for Leg cabins.

**31.5.3.62 const CommittedSpace\_T stdair::DEFAULT\_COMMITTED\_SPACE (0. 0)**

Default committed space value for Leg cabins.

**31.5.3.63 const BlockSpace\_T stdair::DEFAULT\_BLOCK\_SPACE (0. 0)**

Default committed space value for Leg cabins.

**31.5.3.64 const Availability\_T stdair::DEFAULT\_NULL\_AVAILABILITY (0. 0)**

Default null availability (0.0).

**31.5.3.65 const Availability\_T stdair::DEFAULT\_AVAILABILITY (9. 0)**

Default availability (9.0).

**31.5.3.66 const Availability\_T stdair::MAXIMAL\_AVAILABILITY (9999. 0)**

Maximal offered capacity in a cabin.

**31.5.3.67 const CensorshipFlag\_T stdair::DEFAULT\_CLASS\_CENSORSHIPFLAG (false)**

Default boolean for censorship flag given the status of availability for [BookingClass](#).

**31.5.3.68 const BookingLimit\_T stdair::DEFAULT\_CLASS\_BOOKING\_LIMIT (9999. 0)**

Default booking limit value for [BookingClass](#).

**31.5.3.69 const AuthorizationLevel\_T stdair::DEFAULT\_CLASS\_AUTHORIZATION\_LEVEL (9999. 0)**

Default authorization level for [BookingClass](#).

**31.5.3.70 const AuthorizationLevel\_T stdair::DEFAULT\_CLASS\_MAX\_AUTHORIZATION\_LEVEL (9999. 0)**

Default MAX value of authorization level for [BookingClass](#).

**31.5.3.71 const AuthorizationLevel\_T stdair::DEFAULT\_CLASS\_MIN\_AUTHORIZATION\_LEVEL (0. 0)**

Default MIN value of authorization level for [BookingClass](#).

**31.5.3.72 const OverbookingRate\_T stdair::DEFAULT\_CLASS\_OVERBOOKING\_RATE (0. 0)**

Default over-booking rate for [BookingClass](#).

**31.5.3.73 const BookingRatio\_T stdair::DEFAULT\_OND\_BOOKING\_RATE (0. 0)**

Default booking rate for OnD bookings over overall class bookings.

**31.5.3.74 const Fare\_T stdair::DEFAULT\_FARE\_VALUE (0. 0)**

Default Fare value.

**31.5.3.75 const Yield\_T stdair::DEFAULT\_CLASS\_YIELD\_VALUE (0. 0)**

Default yield value for a virtual class.

**31.5.3.76** `const Revenue_T stdair::DEFAULT_REVENUE_VALUE (0. 0)`

Default Revenue value.

**31.5.3.77** `const Percentage_T stdair::DEFAULT_LOAD_FACTOR_VALUE (100. 0)`

Default load factor value (100%).

**31.5.3.78** `const Yield_T stdair::DEFAULT_YIELD_VALUE (0. 0)`

Default yield value.

**31.5.3.79** `const Yield_T stdair::DEFAULT_YIELD_MAX_VALUE (std::numeric_limits< double  
>:: max())`

Default yield max value.

**31.5.3.80** `const NbOfBookings_T stdair::DEFAULT_YIELD_NB_OF_BOOKINGS (0. 0)`

Default number of bookings for YieldRangeStruct\_T.

**31.5.3.81** `const Identity_T stdair::DEFAULT_BOOKING_NUMBER (0)`

Default booking number.

**31.5.3.82** `const NbOfCancellations_T stdair::DEFAULT_YIELD_NB_OF_CANCELLATIONS (0.  
0)`

Default cancellation number for YieldRangeStruct\_T.

**31.5.3.83** `const NbOfNoShows_T stdair::DEFAULT_YIELD_NB_OF_NOSHOWS (0. 0)`

Default no-shows number for YieldRangeStruct\_T.

**31.5.3.84** `const Availability_T stdair::DEFAULT_YIELD_AVAILABILITY (0. 0)`

Default availability for YieldRangeStruct\_T.

**31.5.3.85** `const CensorshipFlag_T stdair::DEFAULT_YIELD_CENSORSHIPFLAG (false)`

Default boolean for booking limit availability for YieldRangeStruct\_T.

**31.5.3.86** `const BookingLimit_T stdair::DEFAULT_YIELD_BOOKING_LIMIT (0. 0)`

Default booking limit value for YieldRangeStruct\_T.

**31.5.3.87** `const OverbookingRate_T stdair::DEFAULT_YIELD_OVERBOOKING_RATE (0. 0)`

Default over-booking rate for YieldRangeStruct\_T.

**31.5.3.88** `const Fare_T stdair::DEFAULT_OND_FARE_VALUE (0. 0)`

Default value of Fare.

**31.5.3.89** `const Count_T stdair::DEFAULT_PROGRESS_STATUS (0)`

Default progress status.

**31.5.3.90** `const Percentage_T stdair::MAXIMUM_PROGRESS_STATUS (100)`

Maximum progress status.

**31.5.3.91** `const Date_T stdair::DEFAULT_EVENT_OLDEST_DATE (2008,  
boost::gregorian::Jan, 1)`

Default reference (oldest) date for the events. No event can occur before that date.

**31.5.3.92** `const DateTime_T stdair::DEFAULT_EVENT_OLDEST_DATETIME  
(DEFAULT_EVENT_OLDEST_DATE, NULL_BOOST_TIME_DURATION)`

Default reference (oldest) date-time for the events. No event can occur before that date-time.

**31.5.3.93** `const PartySize_T stdair::DEFAULT_PARTY_SIZE (1)`

Default party size in a request.

**31.5.3.94** `const DayDuration_T stdair::DEFAULT_STAY_DURATION (7)`

Default duration for a stay.

**31.5.3.95** `const WTP_T stdair::DEFAULT_WTP (1000. 0)`

Default Willingness-to-Pay (WTP, as expressed as a monetary unit).

**31.5.3.96** `const Date_T stdair::DEFAULT_PREFERRED_DEPARTURE_DATE  
(DEFAULT_DEPARTURE_DATE)`

Default departure date.

**31.5.3.97** `const Duration_T stdair::DEFAULT_PREFERRED_DEPARTURE_TIME (8, 0, 0)`

Default preferred departure time (08:00).

**31.5.3.98** `const DateOffset_T stdair::DEFAULT_ADVANCE_PURCHASE (22)`

Default advance purchase.

**31.5.3.99** `const Date_T stdair::DEFAULT_REQUEST_DATE (DEFAULT_PREFERRED_  
DEPARTURE_DATE- DEFAULT_ADVANCE_PURCHASE)`

Default request date.

**31.5.3.100** `const Duration_T stdair::DEFAULT_REQUEST_TIME (8, 0, 0)`

Default preferred departure time (08:00).

**31.5.3.101** `const DateTime_T stdair::DEFAULT_REQUEST_DATE_TIME  
(DEFAULT_REQUEST_DATE, DEFAULT_REQUEST_TIME)`

Default request date-time.

**31.5.3.102** `const CabinCode_T stdair::DEFAULT_PREFERRED_CABIN ("M")`

Default preferred cabin.

**31.5.3.103** `const CityCode_T stdair::DEFAULT_POS ("ALL")`

Default point-of-sale.

**31.5.3.104** `const ChannelLabel_T stdair::DEFAULT_CHANNEL ("DC")`

Default channel (e.g., "DC" meaning Different Channels).

**31.5.3.105** `const ChannelLabel_T stdair::CHANNEL_DN ("DN")`

DN channel (e.g., direct on-line).

**31.5.3.106** `const ChannelLabel_T stdair::CHANNEL_IN ("IN")`

IN channel (e.g., indirect on-line).

**31.5.3.107** `const TripType_T stdair::TRIP_TYPE_ONE_WAY ("OW")`

Trip type one-way (e.g., "OW").

**31.5.3.108** `const TripType_T stdair::TRIP_TYPE_ROUND_TRIP ("RT")`

Trip type round-trip (e.g., "RT").

**31.5.3.109** `const TripType_T stdair::TRIP_TYPE_INBOUND ("RI")`

Trip type inbound (e.g., "RI").

**31.5.3.110** `const TripType_T stdair::TRIP_TYPE_OUTBOUND ("RO")`

Trip type outbound (e.g., "RO").

**31.5.3.111** `const FrequentFlyer_T stdair::DEFAULT_FF_TIER ("N")`

Default frequent flyer tier (non member).

**31.5.3.112** `const PriceValue_T stdair::DEFAULT_VALUE_OF_TIME (100. 0)`

Default value of time (expressed as a monetary unit per hour).

**31.5.3.113** `const IntDuration_T stdair::HOURL_CONVERTED_IN_SECONDS (3600)`

Number of second in one hour

**31.5.3.114** `const Duration_T stdair::DEFAULT_MINIMAL_CONNECTION_TIME (0, 30, 0)`

Default Minimal connection time.

**31.5.3.115** `const Duration_T stdair::DEFAULT_MAXIMAL_CONNECTION_TIME (24, 0, 0)`

Default maximal connection time.

**31.5.3.116** `const MatchingIndicator_T stdair::DEFAULT_MATCHING_INDICATOR (0. 0)`

Default Matching Indicator value.

**31.5.3.117** `const PriceCurrency_T stdair::DEFAULT_CURRENCY ("EUR")`

Default currency (euro).

**31.5.3.118** `const AvailabilityStatus_T stdair::DEFAULT_AVAILABILITY_STATUS (false)`

Default availability status for a travel solution.

**31.5.3.119** `const AirlineCode_T stdair::DEFAULT_AIRLINE_CODE ("XX")`

Default airline code value ("XX").

**31.5.3.120** `const AirlineCode_T stdair::DEFAULT_NULL_AIRLINE_CODE ("" )`

Default airline code value ("").

**31.5.3.121** `const FlightNumber_T stdair::DEFAULT_FLIGHT_NUMBER (9999)`

Default flight number (9999).

**31.5.3.122** `const FlightNumber_T stdair::DEFAULT_FLIGHT_NUMBER_FF (255)`

Default flight number for fare families (255).

**31.5.3.123** `const TableID_T stdair::DEFAULT_TABLE_ID (9999)`

Default data table number (9999).

**31.5.3.124** `const Date_T stdair::DEFAULT_DEPARTURE_DATE (1900, boost::gregorian::Jan, 1)`

Default flight departure date (01/01/1900).

**31.5.3.125** `const AirportCode_T stdair::DEFAULT_AIRPORT_CODE ("XXX")`

Default airport code value ("XXX").

**31.5.3.126** `const AirportCode_T stdair::DEFAULT_NULL_AIRPORT_CODE ("" )`

Default airport code value ("").

**31.5.3.127** `const AirportCode_T stdair::DEFAULT_ORIGIN ("XXX")`

Default Origin.

**31.5.3.128** `const AirportCode_T stdair::DEFAULT_DESTINATION ("YYY")`

Default destination.

**31.5.3.129** `const CabinCode_T stdair::DEFAULT_CABIN_CODE ("X")`

Default cabin code.

**31.5.3.130** `const FamilyCode_T stdair::DEFAULT_FARE_FAMILY_CODE ("EcoSaver")`

Default fare family Code.

**31.5.3.131** `const FamilyCode_T stdair::DEFAULT_NULL_FARE_FAMILY_CODE ("NoFF")`

Default null fare family Code ("NoFF").

**31.5.3.132** `const ClassCode_T stdair::DEFAULT_CLASS_CODE ("X")`

Default class code value ("X").

**31.5.3.133** `const ClassCode_T stdair::DEFAULT_NULL_CLASS_CODE ("")`

Default null class code value ("").

**31.5.3.134** `const BidPrice_T stdair::DEFAULT_BID_PRICE (0. 0)`

Default Bid-Price.

**31.5.3.135** `const unsigned short stdair::MAXIMAL_NUMBER_OF_LEGS_IN_FLIGHT (7)`

Maximal number of legs linked to a single flight-date.

Note that the number of derived segments is  $n*(n+1)/2$  if  $n$  is the number of legs.

**31.5.3.136** `const unsigned short stdair::MAXIMAL_NUMBER_OF_SEGMENTS_IN_OND (3)`

Maximal number of segments linked to a single O&D (Origin & Destination).

**31.5.3.137** `const SeatIndex_T stdair::DEFAULT_SEAT_INDEX (1)`

Default seat index (for a bucket and/or Bid-Price Vector slot).

**31.5.3.138** `const NbOfSeats_T stdair::DEFAULT_NULL_BOOKING_NUMBER (0)`

Default number of bookings.

**31.5.3.139** `const CapacityAdjustment_T stdair::DEFAULT_NULL_CAPACITY_ADJUSTMENT (0)`

Default capacity adjustment of the cabin.

**31.5.3.140** `const UPR_T stdair::DEFAULT_NULL_UPR (0)`

Default unsold Protection (UPR).

**31.5.3.141** `const std::string stdair::DEFAULT_FARE_FAMILY_VALUE_TYPE ("FF")`

Default value type (within a guillotine block) for fare family.

**31.5.3.142** `const std::string stdair::DEFAULT_SEGMENT_CABIN_VALUE_TYPE ("SC")`

Default value type (within a guillotine block) for segment-cabin.

**31.5.3.143** `const std::string stdair::DEFAULT_KEY_FLD_DELIMITER (";")`

Default delimiter for string display (e.g delimiter for inventory key and flight-date key).

**31.5.3.144** `const std::string stdair::DEFAULT_KEY_SUB_FLD_DELIMITER ("", "")`

Default sub delimiter for string display (e.g delimiter for flight number and departure date of a flight-date key).

**31.5.3.145** `const boost::char_separator<char> stdair::DEFAULT_KEY_TOKEN_DELIMITER (";", " ")`

Default token for decoding a full string display.

**31.5.3.146** `template<int MIN, int MAX> date_time_element<MIN, MAX> stdair::operator*  
(const date_time_element< MIN, MAX > & o1, const date_time_element< MIN,  
MAX > & o2) [inline]`

Operator\* overload.

Definition at line 47 of file [BasParserHelperTypes.hpp](#).

References [stdair::date\\_time\\_element< MIN, MAX >::\\_value](#).

**31.5.3.147** `template<int MIN, int MAX> date_time_element<MIN, MAX> stdair::operator+  
(const date_time_element< MIN, MAX > & o1, const date_time_element< MIN,  
MAX > & o2) [inline]`

Operator+ overload.

Definition at line 55 of file [BasParserHelperTypes.hpp](#).

References [stdair::date\\_time\\_element< MIN, MAX >::\\_value](#).

**31.5.3.148** `template void stdair::AirlineClassListKey::serialize< ba::text_oarchive >

### 31.5.4 Variable Documentation

#### 31.5.4.1 `const std::string stdair::DOW_STR`

**Initial value:**

```
{ "Mon", "Tue", "Wed", "Thu", "Fri", "Sat", "Sun" }
```

Day names (in English).

Representation of Dow-Of-the-Week

Definition at line 53 of file [BasConst.cpp](#).

Referenced by [stdair::DoWStruct::describe\(\)](#).

#### 31.5.4.2 `const UnconstrainingMethod stdair::DEFAULT_UNCONSTRAINING_METHOD`

Default Unconstraining Method (By Expectation-Maximisation).

Default Unconstraining Method (By Time Frame).

Definition at line 140 of file [BasConst\\_Inventory.hpp](#).

#### 31.5.4.3 `const PartnershipTechnique stdair::DEFAULT_PARTNERSHIP_TECHNIQUE`

Default Partnership Technique (None).

Definition at line 149 of file [BasConst\\_Inventory.hpp](#).

#### 31.5.4.4 `const ForecastingMethod stdair::DEFAULT_FORECASTING_METHOD`

Default Forecasting Method (Q Forecasting).

Definition at line 137 of file [BasConst\\_Inventory.hpp](#).

**31.5.4.5 const PreOptimisationMethod stdair::DEFAULT\_PREOPTIMISATION\_METHOD**

Default Pre-Optimisation Method (NONE).

Definition at line 143 of file [BasConst\\_Inventory.hpp](#).

**31.5.4.6 const OptimisationMethod stdair::DEFAULT\_OPTIMISATION\_METHOD**

Default Optimisation Method (Leg Based Monte Carlo).

Default Optimisation Method (Leg Based EMSRb).

Definition at line 146 of file [BasConst\\_Inventory.hpp](#).

**31.5.4.7 const CensorshipFlagList\_T stdair::DEFAULT\_CLASS\_CENSORSHIPFLAG\_LIST**

**Initial value:**

```
std::vector<CensorshipFlag_T>()
```

Default list of censorship flag given the status of availability for [BookingClass](#).

Definition at line 253 of file [BasConst.cpp](#).

**31.5.4.8 const Date\_T stdair::DEFAULT\_DICO\_STUDIED\_DATE**

Default DICO studied date.

Definition at line 426 of file [BasConst.cpp](#).

**31.5.4.9 const AirlineCodeList\_T stdair::DEFAULT\_AIRLINE\_CODE\_LIST**

Default airline code list value (empty vector).

Definition at line 436 of file [BasConst.cpp](#).

**31.5.4.10 const ClassList\_StringList\_T stdair::DEFAULT\_CLASS\_CODE\_LIST**

Default class code list value (empty vector).

Definition at line 478 of file [BasConst.cpp](#).

**31.5.4.11 const BidPriceVector\_T stdair::DEFAULT\_BID\_PRICE\_VECTOR =  
std::vector<BidPrice\_T>()**

Default Bid-Price Vector.

Default Bid-Price Vector (empty vector).

Definition at line 484 of file [BasConst.cpp](#).

**31.5.4.12 const int stdair::DEFAULT\_MAX\_DTD = 365**

Default value for max day-to-departure (365).

Definition at line 514 of file [BasConst.cpp](#).

Referenced by [stdair::SegmentSnapshotTable::initSnapshotBlocks\(\)](#).

**31.5.4.13 const DCPList\_T stdair::DEFAULT\_DCP\_LIST = DefaultDCPList::init()**

Default data collection point list.

Definition at line 517 of file [BasConst.cpp](#).

**31.5.4.14 const FRAT5Curve\_T stdair::FRAT5\_CURVE\_A**

**Initial value:**

```
DefaultMap::createFRAT5CurveA ()
```

FRAT5 curve A for forecasting and optimisation.

FRAT5 curves for forecasting and optimisation.

Definition at line 531 of file [BasConst.cpp](#).

**31.5.4.15 const FRAT5Curve\_T stdair::FRAT5\_CURVE\_B**

**Initial value:**

```
DefaultMap::createFRAT5CurveB ()
```

FRAT5 curve B for forecasting and optimisation.

Definition at line 545 of file [BasConst.cpp](#).

**31.5.4.16 const FRAT5Curve\_T stdair::FRAT5\_CURVE\_C**

**Initial value:**

```
DefaultMap::createFRAT5CurveC ()
```

FRAT5 curve C for forecasting and optimisation.

Definition at line 559 of file [BasConst.cpp](#).

**31.5.4.17 const FRAT5Curve\_T stdair::FRAT5\_CURVE\_D**

**Initial value:**

```
DefaultMap::createFRAT5CurveD()
```

FRAT5 curve D for forecasting and optimisation.

Definition at line 573 of file [BasConst.cpp](#).

#### 31.5.4.18 const FFDisutilityCurve\_T stdair::FF\_DISUTILITY\_CURVE\_A

**Initial value:**

```
DefaultMap::createFFDisutilityCurveA()
```

Disutility curve A for forecasting and optimisation. The lower the value (disutility), the higher the demand sells up to higher fare families.

Disutility curves for fare families.

Definition at line 591 of file [BasConst.cpp](#).

#### 31.5.4.19 const FFDisutilityCurve\_T stdair::FF\_DISUTILITY\_CURVE\_B

**Initial value:**

```
DefaultMap::createFFDisutilityCurveB()
```

Disutility curve B for forecasting and optimisation. The lower the value (disutility), the higher the demand sells up to higher fare families.

Definition at line 609 of file [BasConst.cpp](#).

#### 31.5.4.20 const FFDisutilityCurve\_T stdair::FF\_DISUTILITY\_CURVE\_C

**Initial value:**

```
DefaultMap::createFFDisutilityCurveC()
```

Disutility curve C for forecasting and optimisation. The lower the value (disutility), the higher the demand sells up to higher fare families.

Definition at line 627 of file [BasConst.cpp](#).

#### 31.5.4.21 const FFDisutilityCurve\_T stdair::FF\_DISUTILITY\_CURVE\_D

**Initial value:**

```
DefaultMap::createFFDisutilityCurveD()
```

Disutility curve D for forecasting and optimisation. The lower the value (disutility), the higher the demand sells up to higher fare families.

Definition at line 645 of file [BasConst.cpp](#).

**31.5.4.22 const FFDisutilityCurve\_T stdair::FF\_DISUTILITY\_CURVE\_E****Initial value:**

```
DefaultMap::createFFDisutilityCurveE()
```

Disutility curve E for forecasting and optimisation. The lower the value (disutility), the higher the demand sells up to higher fare families.

Definition at line 663 of file [BasConst.cpp](#).

**31.5.4.23 const FFDisutilityCurve\_T stdair::FF\_DISUTILITY\_CURVE\_F****Initial value:**

```
DefaultMap::createFFDisutilityCurveF()
```

Disutility curve F for forecasting and optimisation. The lower the value (disutility), the higher the demand sells up to higher fare families.

Definition at line 681 of file [BasConst.cpp](#).

**31.5.4.24 const DTDFratMap\_T stdair::DEFAULT\_DTD\_FRAT5COEF\_MAP****Initial value:**

```
DefaultDtdFratMap::init()
```

Default frat5 coef map for demand to come forecaster.

Default frat5 coef map.

Definition at line 695 of file [BasConst.cpp](#).

**31.5.4.25 const DTDProbMap\_T stdair::DEFAULT\_DTD\_PROB\_MAP****Initial value:**

```
DefaultDtdProbMap::init()
```

Default arrival pattern map.

Definition at line 712 of file [BasConst.cpp](#).

**31.5.4.26 const OnDStringList\_T stdair::DEFAULT\_OND\_STRING\_LIST**

Default list of full keys.

Definition at line 736 of file [BasConst.cpp](#).

**31.5.4.27 const std::string stdair::DISPLAY\_LEVEL\_STRING\_ARRAY**

Array with the indentation spaces needed for all the BOM hierarchical levels.

Definition at line 742 of file [BasConst.cpp](#).

**31.5.4.28 const std::string stdair::DEFAULT\_KEY\_FLD\_DELIMITER**

Default delimiter for string display (e.g delimiter for inventory key and flight-date key). Typically set to ','.

Referenced by [stdair::LegDate::describeRoutingKey\(\)](#), [stdair::SegmentCabin::getFullerKey\(\)](#), [stdair::LegCabin::getFullerKey\(\)](#), and [stdair::ParsedKey::toString\(\)](#).

**31.5.4.29 const std::string stdair::DEFAULT\_KEY\_SUB\_FLD\_DELIMITER**

Default sub delimiter for string display (e.g delimiter for flight number and departure date of a flight-date key). Typically set to ' '.

Referenced by [stdair::BomRetriever::retrieveFullKeyFromSegmentDate\(\)](#), [stdair::SegmentDateKey::toString\(\)](#), [stdair::PosChannelKey::toString\(\)](#), [stdair::ParsedKey::toString\(\)](#), [stdair::FlightDateKey::toString\(\)](#), [stdair::AirportPairKey::toString\(\)](#), and [stdair::AirlineClassListKey::toString\(\)](#).

**31.5.4.30 const boost::char\_separator<char> stdair::DEFAULT\_KEY\_TOKEN\_DELIMITER**

Default token for decoding a full string display.

Referenced by [stdair::BomKeyManager::extractKeys\(\)](#).

**31.5.4.31 const Distance\_T stdair::DEFAULT\_DISTANCE\_VALUE**

Default distance value, in kilometers (0).

Default distance value (kilometers).

Definition at line 30 of file [BasConst\\_General.hpp](#).

**31.5.4.32 const ClassCode\_T stdair::DEFAULT\_CLOSED\_CLASS\_CODE**

Default closed class code ("CC").

**31.5.4.33 const NbOfBookings\_T stdair::DEFAULT\_CLASS\_NB\_OF\_BOOKINGS**

Default number of bookings (with counted cancellation) for [BookingClass](#) (0).

Default number of bookings for [BookingClass](#).

Default number of bookings (0).

Definition at line 27 of file [BasConst\\_General.hpp](#).

**31.5.4.34 const NbOfBookings\_T stdair::DEFAULT\_CLASS\_TOTAL\_NB\_OF\_BOOKINGS**

Default number of bookings (without cancellation) for [BookingClass](#) (0).

**31.5.4.35 const NbOfBookings\_T stdair::DEFAULT\_CLASS\_UNCONSTRAINED\_DEMAND**

Default unconstrained demand for [BookingClass](#) (0).

**31.5.4.36 const NbOfBookings\_T stdair::DEFAULT\_CLASS\_REMAINING\_DEMAND\_MEAN**

Default remaining future demand mean for [BookingClass](#) (0).

**31.5.4.37 const NbOfBookings\_T stdair::DEFAULT\_CLASS\_REMAINING\_DEMAND -  
STANDARD\_DEVIATION**

Default remaining futre demand standard deviation for [BookingClass](#) (0).

**31.5.4.38 const NbOfCancellations\_T stdair::DEFAULT\_CLASS\_NB\_OF\_CANCELLATIONS**

Default number of cancellations for [BookingClass](#) (0).

**31.5.4.39 const NbOfNoShows\_T stdair::DEFAULT\_CLASS\_NB\_OF\_NOSHOWS**

Default number of no-shows for [BookingClass](#) (0).

**31.5.4.40 const CabinCapacity\_T stdair::DEFAULT\_CABIN\_CAPACITY**

Default cabin capacity for Leg cabins (0.0).

Default cabin capacity for Leg cabins.

Definition at line 21 of file [BasConst\\_General.hpp](#).

**31.5.4.41 const CommittedSpace\_T stdair::DEFAULT\_COMMITTED\_SPACE**

Default committed space value for Leg cabins (0.0).

**31.5.4.42 const BlockSpace\_T stdair::DEFAULT\_BLOCK\_SPACE**

Default committed space value for Leg cabins (0.0).

**31.5.4.43 const Availability\_T stdair::DEFAULT\_NULL\_AVAILABILITY**

Default null availability (0.0).

**31.5.4.44 const Availability\_T stdair::DEFAULT\_AVAILABILITY**

Default availability (9.0).

**31.5.4.45 const CensorshipFlag\_T stdair::DEFAULT\_CLASS\_CENSORSHIPFLAG**

Default boolean for censorship flag given the status of availability for [BookingClass](#).

**31.5.4.46 const BookingLimit\_T stdair::DEFAULT\_CLASS\_BOOKING\_LIMIT**

Default booking limit value for [BookingClass](#).

**31.5.4.47 const AuthorizationLevel\_T stdair::DEFAULT\_CLASS\_AUTHORIZATION\_LEVEL**

Default authorization level for [BookingClass](#).

**31.5.4.48 const AuthorizationLevel\_T stdair::DEFAULT\_CLASS\_MAX\_AUTHORIZATION\_LEVEL**

Default MAX value of authorization level for [BookingClass](#).

**31.5.4.49 const AuthorizationLevel\_T stdair::DEFAULT\_CLASS\_MIN\_AUTHORIZATION\_LEVEL**

Default MIN value of authorization level for [BookingClass](#).

**31.5.4.50 const OverbookingRate\_T stdair::DEFAULT\_CLASS\_OVERBOOKING\_RATE**

Default over-booking rate for [BookingClass](#).

**31.5.4.51 const Fare\_T stdair::DEFAULT\_FARE\_VALUE**

Default fare.

Default value of Fare.

Definition at line 36 of file [BasConst\\_General.hpp](#).

**31.5.4.52 const Revenue\_T stdair::DEFAULT\_REVENUE\_VALUE**

Default revenue value for [BookingClass](#).

Default revenue value.

Definition at line 42 of file [BasConst\\_General.hpp](#).

**31.5.4.53 const PriceCurrency\_T stdair::DEFAULT\_CURRENCY**

Default currency (euro).

Definition at line 39 of file [BasConst\\_General.hpp](#).

**31.5.4.54 const Percentage\_T stdair::DEFAULT\_LOAD\_FACTOR\_VALUE**

Default load factor value (100%).

**31.5.4.55 const DayDuration\_T stdair::DEFAULT\_DAY\_DURATION**

Default number of duration days (0).

Default Duration in days (e.g., 0).

Definition at line 26 of file [BasConst\\_Period\\_BOM.hpp](#).

**31.5.4.56 const double stdair::DEFAULT\_EPSILON\_VALUE**

Default epsilon value between customer requirements and a fare rule.

Default epsilon value (1e-4).

Definition at line 18 of file [BasConst\\_General.hpp](#).

**31.5.4.57 const AirportCode\_T stdair::AIRPORT\_LHR**

London Heathrow airport (e.g., "LHR").

**31.5.4.58 const AirportCode\_T stdair::AIRPORT\_SYD**

Sydney airport (e.g., "SYD").

**31.5.4.59 const CityCode\_T stdair::POS\_LHR**

London city code (e.g., "LHR").

**31.5.4.60 const DayDuration\_T stdair::NO\_ADVANCE\_PURCHASE**

Advance purchase 0 day.

**31.5.4.61 const SaturdayStay\_T stdair::SATURDAY\_STAY**

Default saturdayStay value (true).

**31.5.4.62 const SaturdayStay\_T stdair::NO\_SATURDAY\_STAY**

Default saturdayStay value (false).

**31.5.4.63 const ChangeFees\_T stdair::CHANGE\_FEES**

Default change fees value (true).

**31.5.4.64 const ChangeFees\_T stdair::NO\_CHANGE\_FEES**

Default change fees value (false).

**31.5.4.65 const NonRefundable\_T stdair::NON\_REFUNDABLE**

Default non refundable value (true).

**31.5.4.66 const NonRefundable\_T stdair::NO\_NON\_REFUNDABLE**

Default refundable value (false).

**31.5.4.67 const DayDuration\_T stdair::NO\_STAY\_DURATION**

Stay duration 0 day.

**31.5.4.68 const CabinCode\_T stdair::CABIN\_Y**

Cabin 'Y'.

**31.5.4.69 const AirlineCode\_T stdair::AIRLINE\_CODE\_BA**

Airline code "BA".

**31.5.4.70 const ClassCode\_T stdair::CLASS\_CODE\_Y**

Class code 'Y'.

**31.5.4.71 const ClassCode\_T stdair::CLASS\_CODE\_Q**

Class code 'Q'.

**31.5.4.72 const AirportCode\_T stdair::AIRPORT\_SIN**

Singapour airport (e.g., "SIN").

**31.5.4.73 const AirportCode\_T stdair::AIRPORT\_BKK**

Bangkok airport (e.g., "BKK").

**31.5.4.74 const CityCode\_T stdair::POS\_SIN**

Singapour city code (e.g., "SIN").

**31.5.4.75 const CabinCode\_T stdair::CABIN\_ECO**

Economic cabin (e.g., "Eco").

**31.5.4.76 const FrequentFlyer\_T stdair::FREQUENT\_FLYER\_MEMBER**

Frequent flyer tier (e.g., "M" meaning member).

**31.5.4.77 const Count\_T stdair::DEFAULT\_PROGRESS\_STATUS**

Default progress status.

Referenced by [stdair::ProgressStatus::reset\(\)](#).

**31.5.4.78 const Date\_T stdair::DEFAULT\_EVENT\_OLDEST\_DATE**

Default reference (oldest) date for the events. No event can occur before that date.

**31.5.4.79 const DateTime\_T stdair::DEFAULT\_EVENT\_OLDEST\_DATETIME**

Default reference (oldest) date-time for the events. No event can occur before that date-time.

Referenced by [stdair::EventStruct::describe\(\)](#), [stdair::EventStruct::EventStruct\(\)](#), and [stdair::EventStruct::getEventTime\(\)](#).

**31.5.4.80 const Percentage\_T stdair::MAXIMUM\_PROGRESS\_STATUS**

Maximum progress status.

Referenced by [stdair::ProgressStatus::progress\(\)](#).

**31.5.4.81 const std::string stdair::DEFAULT\_BOM\_ROOT\_KEY**

Default value for the BOM tree root key (" -- ROOT -- ").

**31.5.4.82 const NbOfFlightDates\_T stdair::DEFAULT\_NB\_OF\_FLIGHTDATES**

Default number of generated flight dates (0).

**31.5.4.83 const unsigned int stdair::DEFAULT\_FLIGHT\_SPEED**

Default flight speed (number of kilometers per hour).

**31.5.4.84 const BookingRatio\_T stdair::DEFAULT\_OND\_BOOKING\_RATE**

Default booking rate for OnD bookings over overall class bookings.

**31.5.4.85 const Count\_T stdair::SECONDS\_IN\_ONE\_DAY**

Number of seconds in one day (86400).

**31.5.4.86 const Count\_T stdair::MILLISECONDS\_IN\_ONE\_SECOND**

Number of milliseconds in one second (1000).

**31.5.4.87 const Date\_T stdair::DEFAULT\_DATE**

Default date for the General (1-Jan-2010).

**31.5.4.88 const DateTime\_T stdair::DEFAULT\_DATETIME**

Default date-time (1-Jan-2010).

**31.5.4.89 const Duration\_T stdair::DEFAULT\_EPSILON\_DURATION**

Default epsilon duration (1 nanosecond).

**31.5.4.90 const RandomSeed\_T stdair::DEFAULT\_RANDOM\_SEED**

Default random seed (120765987).

Referenced by [stdair::BookingClass::generateDemandSamples\(\)](#).

**31.5.4.91 const Duration\_T stdair::NULL\_BOOST\_TIME\_DURATION**

Null time duration (in boost::time\_duration unit).

Definition at line 23 of file [BasConst\\_TravelSolution.hpp](#).

**31.5.4.92 const Duration\_T stdair::DEFAULT\_NULL\_DURATION**

Default null duration (in boost::time\_duration unit).

**31.5.4.93 const Fare\_T stdair::DEFAULT\_CLASS\_FARE\_VALUE**

Default value of Availability.

**31.5.4.94 const NbOfAirlines\_T stdair::DEFAULT\_NBOFAIRLINES**

Default number of airlines (0).

**31.5.4.95 const unsigned int stdair::DEFAULT\_NB\_OF\_DAYS\_IN\_A\_YEAR**

Default number of days in a year (365).

**31.5.4.96 const ChannelLabel\_T stdair::DEFAULT\_CHANNEL**

Default channel.

Default channel (e.g., direct on-line).

Definition at line 48 of file [BasConst\\_Request.hpp](#).

**31.5.4.97 const unsigned int stdair::DEFAULT\_NUMBER\_OF\_SUBDIVISIONS**

Higher value per thousand

Referenced by [stdair::DictionaryManager::keyToValue\(\)](#), and [stdair::DictionaryManager::valueToKey\(\)](#).

**31.5.4.98 const AirlineCode\_T stdair::DEFAULT\_AIRLINE\_CODE**

Default airline code value ("XX").

Referenced by [stdair::BomRetriever::retrieveDummyLegCabin\(\)](#), and [stdair::BomRetriever::retrieveDummySegmentCabin\(\)](#).

**31.5.4.99 const AirlineCode\_T stdair::DEFAULT\_NULL\_AIRLINE\_CODE**

Default airline code value ("").

**31.5.4.100 const FlightNumber\_T stdair::DEFAULT\_FLIGHT\_NUMBER**

Default flight number (9999).

Referenced by [stdair::BomRetriever::retrieveDummyLegCabin\(\)](#), and [stdair::BomRetriever::retrieveDummySegmentCabin\(\)](#).

**31.5.4.101 const FlightNumber\_T stdair::DEFAULT\_FLIGHT\_NUMBER\_FF**

Default flight number for fare families (255).

Referenced by [stdair::BomRetriever::retrieveDummyLegCabin\(\)](#), and [stdair::BomRetriever::retrieveDummySegmentCabin\(\)](#).

**31.5.4.102 const TableID\_T stdair::DEFAULT\_TABLE\_ID**

Default data table ID (9999).

**31.5.4.103 const Date\_T stdair::DEFAULT\_DEPARTURE\_DATE**

Default flight departure date (01/01/1900).

Referenced by [stdair::BomRetriever::retrieveDummyLegCabin\(\)](#), and [stdair::BomRetriever::retrieveDummySegmentCabin\(\)](#).

**31.5.4.104 const AirportCode\_T stdair::DEFAULT\_AIRPORT\_CODE**

Default airport code value ("XXX").

**31.5.4.105 const AirportCode\_T stdair::DEFAULT\_NULL\_AIRPORT\_CODE**

Default airport code value ("").

**31.5.4.106 const AirportCode\_T stdair::DEFAULT\_ORIGIN**

Default Origin ("XXX").

Referenced by [stdair::BomRetriever::retrieveDummyLegCabin\(\)](#), and [stdair::BomRetriever::retrieveDummySegmentCabin\(\)](#).

**31.5.4.107 const AirportCode\_T stdair::DEFAULT\_DESTINATION**

Default Destination ("XXX").

Referenced by [stdair::BomRetriever::retrieveDummySegmentCabin\(\)](#).

**31.5.4.108 const CabinCode\_T stdair::DEFAULT\_CABIN\_CODE**

Default Cabin Code ("X").

Referenced by [stdair::BomRetriever::retrieveDummyLegCabin\(\)](#), and [stdair::BomRetriever::retrieveDummySegmentCabin\(\)](#).

**31.5.4.109 const FamilyCode\_T stdair::DEFAULT\_FARE\_FAMILY\_CODE**

Default Fare Family Code ("EcoSaver").

**31.5.4.110 const FamilyCode\_T stdair::DEFAULT\_NULL\_FARE\_FAMILY\_CODE**

Default null fare family Code ("NoFF").

**31.5.4.111 const PolicyCode\_T stdair::DEFAULT\_POLICY\_CODE**

Default [Policy](#) Code ("0").

**31.5.4.112 const NestingStructureCode\_T stdair::DEFAULT\_NESTING\_STRUCTURE\_CODE**

Default Nesting Structure Code ("DEFAULT").

**31.5.4.113 const NestingStructureCode\_T stdair::DISPLAY\_NESTING\_STRUCTURE\_CODE**

Display Nesting Structure Code ("Display Nesting").

**31.5.4.114 const NestingStructureCode\_T stdair::YIELD\_BASED\_NESTING\_STRUCTURE\_CODE**

Display Nesting Structure Code ("Yield-Based Nesting").

Referenced by [stdair::FacBomManager::resetYieldBasedNestingStructure\(\)](#).

**31.5.4.115 const NestingNodeCode\_T stdair::DEFAULT\_NESTING\_NODE\_CODE**

Default Nesting Node Code ("0").

**31.5.4.116 const ClassCode\_T stdair::DEFAULT\_CLASS\_CODE**

Default class code value ("X").

**31.5.4.117 const ClassCode\_T stdair::DEFAULT\_NULL\_CLASS\_CODE**

Default null class code value ("").

**31.5.4.118 const BidPrice\_T stdair::DEFAULT\_BID\_PRICE**

Default Bid-Price (0.0).

**31.5.4.119 const unsigned short stdair::MAXIMAL\_NUMBER\_OF\_LEGS\_IN\_FLIGHT**

Maximal number of legs linked to a single flight-date (e.g., 7).

Note that the number of derived segments is  $n*(n+1)/2$  if  $n$  is the number of legs.

**31.5.4.120 const unsigned short stdair::MAXIMAL\_NUMBER\_OF\_SEGMENTS\_IN\_OND**

Maximal number of segments linked to a single O&D (Origin & Destination)(e.g., 3).

**31.5.4.121 const Availability\_T stdair::MAXIMAL\_AVAILABILITY**

Maximal offered capacity in a cabin.

**31.5.4.122 const SeatIndex\_T stdair::DEFAULT\_SEAT\_INDEX**

Default seat index (for a bucket and/or Bid-Price Vector slot)(e.g., 1).

**31.5.4.123 const NbOfSeats\_T stdair::DEFAULT\_NULL\_BOOKING\_NUMBER**

Default number of bookings.

**31.5.4.124 const CapacityAdjustment\_T stdair::DEFAULT\_NULL\_CAPACITY\_ADJUSTMENT**

Default capacity adjustment of the cabin.

**31.5.4.125 const UPR\_T stdair::DEFAULT\_NULL\_UPR**

Default unsold Protection (UPR).

**31.5.4.126 const std::string stdair::DEFAULT\_FARE\_FAMILY\_VALUE\_TYPE**

Default value type (within a guillotine block) for fare family.

**31.5.4.127 const std::string stdair::DEFAULT\_SEGMENT\_CABIN\_VALUE\_TYPE**

Default value type (within a guillotine block) for segment-cabin.

**31.5.4.128 const DatePeriod\_T stdair::BOOST\_DEFAULT\_DATE\_PERIOD**

Default date period (0-length, i.e., it lasts one day).

**31.5.4.129 const DOW\_String\_T stdair::DEFAULT\_DOW\_STRING**

Default DOW String (e.g., "1111100").

Referenced by [stdair::DoWStruct::intersection\(\)](#), and [stdair::DoWStruct::shift\(\)](#).

**31.5.4.130 const DateOffset\_T stdair::DEFAULT\_DATE\_OFFSET**

Default Date Offset (e.g., 0).

**31.5.4.131 const PartySize\_T stdair::DEFAULT\_PARTY\_SIZE**

Default party size in a request (e.g., 1).

**31.5.4.132 const DayDuration\_T stdair::DEFAULT\_STAY\_DURATION**

Default duration for a stay (e.g., 7 days).

**31.5.4.133 const WTP\_T stdair::DEFAULT\_WTP**

Default Willingness-to-Pay (WTP, as expressed as a monetary unit).

**31.5.4.134 const CityCode\_T stdair::DEFAULT\_POS**

Default Point-Of-Sale (POS, e.g., "WORLD").

**31.5.4.135 const Date\_T stdair::DEFAULT\_PREFERRED\_DEPARTURE\_DATE**

Default departure date (e.g., 01-Jan-2011).

**31.5.4.136 const Duration\_T stdair::DEFAULT\_PREFERRED\_DEPARTURE\_TIME**

Default preferred departure time (e.g., 08:00).

**31.5.4.137 const DateOffset\_T stdair::DEFAULT\_ADVANCE\_PURCHASE**

Default advance purchase (e.g., 22 days).

**31.5.4.138 const Date\_T stdair::DEFAULT\_REQUEST\_DATE**

Default request date (e.g., 10-Jan-2011).

**31.5.4.139 const Duration\_T stdair::DEFAULT\_REQUEST\_TIME**

Default preferred departure time (e.g., 08:00).

**31.5.4.140 const DateTime\_T stdair::DEFAULT\_REQUEST\_DATE\_TIME**

Default request date-time (e.g., 08:00).

**31.5.4.141 const CabinCode\_T stdair::DEFAULT\_PREFERRED\_CABIN**

Default preferred cabin (e.g., 'M').

**31.5.4.142 const ChannelLabel\_T stdair::CHANNEL\_DN**

DN channel (e.g., direct on-line).

**31.5.4.143 const ChannelLabel\_T stdair::CHANNEL\_IN**

IN channel (e.g., indirect on-line).

**31.5.4.144 const TripType\_T stdair::TRIP\_TYPE\_ONE\_WAY**

Trip type one-way (e.g., "OW").

Referenced by [stdair::BookingRequestStruct::display\(\)](#).

**31.5.4.145 const TripType\_T stdair::TRIP\_TYPE\_ROUND\_TRIP**

Trip type round-trip (e.g., "RT").

Referenced by [stdair::YieldFeatures::isTripTypeValid\(\)](#), and [stdair::FareFeatures::isTripTypeValid\(\)](#).

**31.5.4.146 const TripType\_T stdair::TRIP\_TYPE\_INBOUND**

Trip type inbound (e.g., "RI").

Referenced by [stdair::YieldFeatures::isTripTypeValid\(\)](#), and [stdair::FareFeatures::isTripTypeValid\(\)](#).

**31.5.4.147 const TripType\_T stdair::TRIP\_TYPE\_OUTBOUND**

Trip type outbound (e.g., "RO").

Referenced by [stdair::YieldFeatures::isTripTypeValid\(\)](#), and [stdair::FareFeatures::isTripTypeValid\(\)](#).

**31.5.4.148 const FrequentFlyer\_T stdair::DEFAULT\_FF\_TIER**

Default frequent flyer tier (e.g., non member).

**31.5.4.149 const PriceValue\_T stdair::DEFAULT\_VALUE\_OF\_TIME**

Default value of time (expressed as a monetary unit per hour).

**31.5.4.150 const IntDuration\_T stdair::HOUR\_CONVERTED\_IN\_SECONDS**

Number of second in one hour

**31.5.4.151 const Duration\_T stdair::DEFAULT\_MINIMAL\_CONNECTION\_TIME**

Default Minimal connection time.

**31.5.4.152 const Duration\_T stdair::DEFAULT\_MAXIMAL\_CONNECTION\_TIME**

Default maximal connection time.

**31.5.4.153 const FlightPathCode\_T stdair::DEFAULT\_FLIGHTPATH\_CODE**

Default flightPathCode value ("").

**31.5.4.154 const Availability\_T stdair::DEFAULT\_CLASS\_AVAILABILITY**

Default value of Availability.

**31.5.4.155 const AvailabilityStatus\_T stdair::DEFAULT\_AVAILABILITY\_STATUS**

Default availability status for a travel solution.

**31.5.4.156 const unsigned short stdair::DEFAULT\_NUMBER\_OF\_REQUIRED\_SEATS**

Default number of required seats by the demand.

**31.5.4.157 const MatchingIndicator\_T stdair::DEFAULT\_MATCHING\_INDICATOR**

Default Matching Indicator value between customer requirements and a fare rule.

**31.5.4.158 const AirlineCode\_T stdair::DEFAULT\_DICO\_STUDIED\_AIRLINE**

Default DICO studied airline.

**31.5.4.159 const Yield\_T stdair::DEFAULT\_YIELD\_VALUE**

Default yield value.

**31.5.4.160 const Yield\_T stdair::DEFAULT\_YIELD\_MAX\_VALUE**

Default yield max value.

**31.6 stdair::LOG Namespace Reference****Enumerations**

- enum [EN\\_LogLevel](#) {  
    [CRITICAL](#) = 0, [ERROR](#), [NOTIFICATION](#), [WARNING](#),  
    [DEBUG](#), [VERBOSE](#), [LAST\\_VALUE](#) }

**Variables**

- static const std::string [\\_logLevels](#) [[LAST\\_VALUE](#)]

**31.6.1 Detailed Description**

Level of logs.

**31.6.2 Enumeration Type Documentation****31.6.2.1 enum stdair::LOG::EN\_LogLevel****Enumerator:**

***CRITICAL***  
***ERROR***  
***NOTIFICATION***  
***WARNING***  
***DEBUG***  
***VERBOSE***  
***LAST\_VALUE***

Definition at line 18 of file [stdair\\_log.hpp](#).

### 31.6.3 Variable Documentation

#### 31.6.3.1 const std::string stdair::LOG::\_logLevels[LAST\_VALUE] [static]

Initial value:

```
{ "C", "E", "N", "W", "D", "V" }
```

Definition at line 28 of file [stdair\\_log.hpp](#).

Referenced by [stdair::Logger::log\(\)](#), [stdair::BasLogParams::toShortString\(\)](#), and [stdair::BasLogParams::toString\(\)](#).

## 31.7 stdair\_test Namespace Reference

### Classes

- struct [BookingClass](#)
- struct [Cabin](#)

#### 31.7.1 Detailed Description

Namespace gathering classes and structures for test purposes

## 31.8 swift Namespace Reference

The wrapper namespace.

### Classes

- class [SKeymap](#)  
*The readline keymap wrapper.*
- class [SReadline](#)  
*The readline library wrapper.*

#### 31.8.1 Detailed Description

The wrapper namespace. The namespace is also used for other library elements.

## 32 Class Documentation

### 32.1 stdair::AirlineClassList Class Reference

Class representing the actual attributes for a segment-features.

```
#include <stdair/bom/AirlineClassList.hpp>
stdair::AirlineClassList::
```

- class [FacBom](#)
- class [FacCloneBom](#)
- class [FacBomManager](#)
- class [boost::serialization::access](#)

### 32.1.1 Detailed Description

Class representing the actual attributes for a segment-features.

Definition at line 27 of file [AirlineClassList.hpp](#).

### 32.1.2 Member Typedef Documentation

#### 32.1.2.1 typedef AirlineClassListKey stdair::AirlineClassList::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 38 of file [AirlineClassList.hpp](#).

### 32.1.3 Constructor & Destructor Documentation

#### 32.1.3.1 stdair::AirlineClassList::AirlineClassList (const Key\_T & iKey) [protected]

Main constructor.

Definition at line 34 of file [AirlineClassList.cpp](#).

#### 32.1.3.2 stdair::AirlineClassList::~~AirlineClassList () [protected, virtual]

Destructor.

Definition at line 39 of file [AirlineClassList.cpp](#).

### 32.1.4 Member Function Documentation

#### 32.1.4.1 const Key\_T& stdair::AirlineClassList::getKey () const [inline]

Get the airline class list key.

Definition at line 44 of file [AirlineClassList.hpp](#).

References [\\_key](#).

#### 32.1.4.2 BomAbstract\* const stdair::AirlineClassList::getParent () const [inline]

Get the parent object.

Definition at line 49 of file [AirlineClassList.hpp](#).

References [\\_parent](#).

#### 32.1.4.3 const AirlineCodeList\_T& stdair::AirlineClassList::getAirlineCodeList () const [inline]

Get the airline code list (part of the primary key).

Definition at line 54 of file [AirlineClassList.hpp](#).

References [\\_key](#), and [stdair::AirlineClassListKey::getAirlineCodeList\(\)](#).

#### 32.1.4.4 const ClassList\_StringList\_T& stdair::AirlineClassList::getClassCodeList () const [inline]

Get the class code list (part of the primary key).

Definition at line 59 of file [AirlineClassList.hpp](#).

References [\\_key](#), and [stdair::AirlineClassListKey::getClassCodeList\(\)](#).

#### 32.1.4.5 const HolderMap\_T& stdair::AirlineClassList::getHolderMap () const [inline]

Get the map of children holders.

Definition at line 64 of file [AirlineClassList.hpp](#).

References [\\_holderMap](#).

#### 32.1.4.6 const stdair::Yield\_T& stdair::AirlineClassList::getYield () const [inline]

Get the yield.

Definition at line 69 of file [AirlineClassList.hpp](#).

References [\\_yield](#).

#### 32.1.4.7 const stdair::Fare\_T& stdair::AirlineClassList::getFare () const [inline]

Get the fare.

Definition at line 74 of file [AirlineClassList.hpp](#).

References [\\_fare](#).

#### 32.1.4.8 void stdair::AirlineClassList::setYield (const Yield\_T & iYield) [inline]

Definition at line 80 of file [AirlineClassList.hpp](#).

References [\\_yield](#).

#### 32.1.4.9 void stdair::AirlineClassList::setFare (const Fare\_T & iFare) [inline]

Definition at line 84 of file [AirlineClassList.hpp](#).

References [\\_fare](#).

#### 32.1.4.10 void stdair::AirlineClassList::toStream (std::ostream & ioOut) const [inline, virtual]

Dump a Business Object into an output stream.

##### Parameters:

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 95 of file [AirlineClassList.hpp](#).

References [toString\(\)](#).

**32.1.4.11 void stdair::AirlineClassList::fromStream (std::istream & *ioIn*) [inline, virtual]**

Read a Business Object from an input stream.

#### Parameters:

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 104 of file [AirlineClassList.hpp](#).

**32.1.4.12 std::string stdair::AirlineClassList::toString () const [virtual]**

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 43 of file [AirlineClassList.cpp](#).

References [\\_fare](#), [\\_yield](#), and [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

**32.1.4.13 const std::string stdair::AirlineClassList::describeKey () const [inline]**

Get a string describing the key.

Definition at line 115 of file [AirlineClassList.hpp](#).

References [\\_key](#), and [stdair::AirlineClassListKey::toString\(\)](#).

Referenced by [toString\(\)](#).

**32.1.4.14 template<class Archive > void stdair::AirlineClassList::serialize (Archive & *ar*, const unsigned int *iFileVersion*) [inline]**

Serialisation.

Definition at line 65 of file [AirlineClassList.cpp](#).

References [\\_fare](#), [\\_key](#), and [\\_yield](#).

## 32.1.5 Friends And Related Function Documentation

**32.1.5.1 friend class FacBom [friend]**

Definition at line 28 of file [AirlineClassList.hpp](#).

### 32.1.5.2 friend class FacCloneBom [friend]

Definition at line 29 of file [AirlineClassList.hpp](#).

### 32.1.5.3 friend class FacBomManager [friend]

Definition at line 30 of file [AirlineClassList.hpp](#).

### 32.1.5.4 friend class boost::serialization::access [friend]

Definition at line 31 of file [AirlineClassList.hpp](#).

## 32.1.6 Member Data Documentation

### 32.1.6.1 Key\_T stdair::AirlineClassList::\_key [protected]

Primary key (flight number and departure date).

Definition at line 165 of file [AirlineClassList.hpp](#).

Referenced by [describeKey\(\)](#), [getAirlineCodeList\(\)](#), [getClassCodeList\(\)](#), [getKey\(\)](#), and [serialize\(\)](#).

### 32.1.6.2 BomAbstract\* stdair::AirlineClassList::\_parent [protected]

Pointer on the parent class ([Inventory](#)).

Definition at line 170 of file [AirlineClassList.hpp](#).

Referenced by [getParent\(\)](#).

### 32.1.6.3 HolderMap\_T stdair::AirlineClassList::\_holderMap [protected]

Map holding the children ([SegmentDate](#) and [LegDate](#) objects).

Definition at line 175 of file [AirlineClassList.hpp](#).

Referenced by [getHolderMap\(\)](#).

### 32.1.6.4 Yield\_T stdair::AirlineClassList::\_yield [protected]

Definition at line 180 of file [AirlineClassList.hpp](#).

Referenced by [getYield\(\)](#), [serialize\(\)](#), [setYield\(\)](#), and [toString\(\)](#).

### 32.1.6.5 Fare\_T stdair::AirlineClassList::\_fare [protected]

Definition at line 185 of file [AirlineClassList.hpp](#).

Referenced by [getFare\(\)](#), [serialize\(\)](#), [setFare\(\)](#), and [toString\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/bom/AirlineClassList.hpp](#)
- [stdair/bom/AirlineClassList.cpp](#)

## 32.2 stdair::AirlineClassListKey Struct Reference

Key of airport-pair.

```
#include <stdair/bom/AirlineClassListKey.hpp>
stdair::AirlineClassListKey::
```

inheritance diagram for

### Public Member Functions

### Friends

- class [boost::serialization::access](#)

### 32.2.1 Detailed Description

Key of airport-pair.

Definition at line 25 of file [AirlineClassListKey.hpp](#).

### 32.2.2 Constructor & Destructor Documentation

#### 32.2.2.1 stdair::AirlineClassListKey::AirlineClassListKey (const AirlineCodeList\_T & iAirlineCodeList, const ClassList\_StringList\_T & iClassCodeList)

Constructor.

Definition at line 24 of file [AirlineClassListKey.cpp](#).

### 32.2.2.2 stdair::AirlineClassListKey::AirlineClassListKey (const AirlineClassListKey & iKey)

Copy constructor.

Definition at line 30 of file [AirlineClassListKey.cpp](#).

### 32.2.2.3 stdair::AirlineClassListKey::~AirlineClassListKey ()

Destructor.

Definition at line 36 of file [AirlineClassListKey.cpp](#).

## 32.2.3 Member Function Documentation

### 32.2.3.1 const AirlineCodeList\_T& stdair::AirlineClassListKey::getAirlineCodeList () const [inline]

Get the airline code list.

Definition at line 56 of file [AirlineClassListKey.hpp](#).

Referenced by [stdair::AirlineClassList::getAirlineCodeList\(\)](#).

### 32.2.3.2 const ClassList\_StringList\_T& stdair::AirlineClassListKey::getClassCodeList () const [inline]

Get the class code list.

Definition at line 61 of file [AirlineClassListKey.hpp](#).

Referenced by [stdair::AirlineClassList::getClassCodeList\(\)](#).

### 32.2.3.3 void stdair::AirlineClassListKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 40 of file [AirlineClassListKey.cpp](#).

References [toString\(\)](#).

### 32.2.3.4 void stdair::AirlineClassListKey::fromStream (std::istream & ioIn) [virtual]

Read a Business Object Key from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 45 of file [AirlineClassListKey.cpp](#).

### 32.2.3.5 const std::string stdair::AirlineClassListKey::toString () const [virtual]

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-date.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 49 of file [AirlineClassListKey.cpp](#).

References [stdair::DEFAULT\\_KEY\\_SUB\\_FLD\\_DELIMITER](#).

Referenced by [stdair::AirlineClassList::describeKey\(\)](#), and [toStream\(\)](#).

### 32.2.3.6 template<class Archive > void stdair::AirlineClassListKey::serialize (Archive & ar, const unsigned int iFileVersion) [inline]

Serialisation.

Definition at line 86 of file [AirlineClassListKey.cpp](#).

## 32.2.4 Friends And Related Function Documentation

### 32.2.4.1 friend class boost::serialization::access [friend]

Definition at line 26 of file [AirlineClassListKey.hpp](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/AirlineClassListKey.hpp](#)
- [stdair/bom/AirlineClassListKey.cpp](#)

## 32.3 stdair::AirlineFeature Class Reference

Class representing various configuration parameters (e.g., revenue management methods such EMSRb or Monte-Carlo) for a given airline for the simulation.

#include <stdair/bom/AirlineFeature.hpp> Inheritance diagram for stdair::AirlineFeature::

### 32.3.1 Detailed Description

Class representing various configuration parameters (e.g., revenue management methods such EMSRb or Monte-Carlo) for a given airline for the simulation.

Definition at line 25 of file [AirlineFeature.hpp](#).

### 32.3.2 Member Typedef Documentation

#### 32.3.2.1 typedef AirlineFeatureKey stdair::AirlineFeature::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 35 of file [AirlineFeature.hpp](#).

### 32.3.3 Constructor & Destructor Documentation

#### 32.3.3.1 stdair::AirlineFeature::AirlineFeature (const Key\_T & iKey) [protected]

Main constructor.

Definition at line 14 of file [AirlineFeature.cpp](#).

#### 32.3.3.2 stdair::AirlineFeature::~~AirlineFeature () [protected, virtual]

Destructor.

Definition at line 34 of file [AirlineFeature.cpp](#).

### 32.3.4 Member Function Documentation

#### 32.3.4.1 void stdair::AirlineFeature::toStream (std::ostream & ioOut) const [inline, virtual]

Dump a Business Object into an output stream.

##### Parameters:

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 44 of file [AirlineFeature.hpp](#).

References [toString\(\)](#).

#### 32.3.4.2 void stdair::AirlineFeature::fromStream (std::istream & ioIn) [inline, virtual]

Read a Business Object from an input stream.

##### Parameters:

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 53 of file [AirlineFeature.hpp](#).

#### 32.3.4.3 std::string stdair::AirlineFeature::toString () const [virtual]

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 55 of file [AirlineFeature.cpp](#).

References [\\_forecastingMethod](#), [\\_historicalDataLimit](#), [\\_optimisationMethod](#), [\\_partnershipTechnique](#), [\\_preOptimisationMethod](#), [\\_unconstrainingMethod](#), and [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

#### 32.3.4.4 const std::string stdair::AirlineFeature::describeKey () const [inline]

Get a string describing the key.

Definition at line 64 of file [AirlineFeature.hpp](#).

References [\\_key](#), and [stdair::AirlineFeatureKey::toString\(\)](#).

Referenced by [toString\(\)](#).

#### 32.3.4.5 const Key\_T& stdair::AirlineFeature::getKey () const [inline]

Get the airline feature primary key (airline code).

Definition at line 73 of file [AirlineFeature.hpp](#).

References [\\_key](#).

#### 32.3.4.6 BomAbstract\* const stdair::AirlineFeature::getParent () const [inline]

Get a reference on the parent object instance.

Definition at line 80 of file [AirlineFeature.hpp](#).

References [\\_parent](#).

#### 32.3.4.7 const HolderMap\_T& stdair::AirlineFeature::getHolderMap () const [inline]

Get a reference on the children holder.

Definition at line 87 of file [AirlineFeature.hpp](#).

References [\\_holderMap](#).

#### 32.3.4.8 ForecastingMethod::EN\_ForecastingMethod stdair::AirlineFeature::getForecastingMethod () const [inline]

Get the forecasting method.

Definition at line 94 of file [AirlineFeature.hpp](#).

References [\\_forecastingMethod](#), and [stdair::ForecastingMethod::getMethod\(\)](#).

Referenced by [stdair::Inventory::getForecastingMethod\(\)](#).

#### 32.3.4.9 UnconstrainingMethod::EN\_UnconstrainingMethod stdair::AirlineFeature::getUnconstrainingMethod () const [inline]

Get the unconstraining method.

Definition at line 101 of file [AirlineFeature.hpp](#).

References [\\_unconstrainingMethod](#), and [stdair::UnconstrainingMethod::getMethod\(\)](#).

Referenced by [stdair::Inventory::getUnconstrainingMethod\(\)](#).

#### 32.3.4.10 PartnershipTechnique::EN\_PartnershipTechnique stdair::AirlineFeature::getPartnershipTechnique () const [inline]

Get the partnership technique.

Definition at line 108 of file [AirlineFeature.hpp](#).

References [\\_partnershipTechnique](#), and [stdair::PartnershipTechnique::getTechnique\(\)](#).

Referenced by [stdair::Inventory::getPartnershipTechnique\(\)](#).

#### 32.3.4.11 PreOptimisationMethod::EN\_PreOptimisationMethod stdair::AirlineFeature::getPreOptimisationMethod () const [inline]

Get the pre-optimisation method.

Definition at line 115 of file [AirlineFeature.hpp](#).

References [\\_preOptimisationMethod](#), and [stdair::PreOptimisationMethod::getMethod\(\)](#).

Referenced by [stdair::Inventory::getPreOptimisationMethod\(\)](#).

#### 32.3.4.12 OptimisationMethod::EN\_OptimisationMethod stdair::AirlineFeature::getOptimisationMethod () const [inline]

Get the optimisation method.

Definition at line 122 of file [AirlineFeature.hpp](#).

References [\\_optimisationMethod](#), and [stdair::OptimisationMethod::getMethod\(\)](#).

Referenced by [stdair::Inventory::getOptimisationMethod\(\)](#).

**32.3.4.13** void stdair::AirlineFeature::init (const ForecastingMethod & *iForecastingMethod*, const UnconstrainingMethod & *iUnconstrainingMethod*, const PreOptimisationMethod & *iPreOptimisationMethod*, const OptimisationMethod & *iOptimisationMethod*, const HistoricalDataLimit\_T & *iHistoricalDataLimit*, const ControlMode\_T & *iControlMode*, const PartnershipTechnique & *iPartnershipTechnique*)

Initialization method.

#### Parameters:

*const* [ForecastingMethod](#)& Forecasting method.  
*const* [UnconstrainingMethod](#)& Unconstraining method.  
*const* [PreOptimisationMethod](#)& Pre-optimisation method.  
*const* [OptimisationMethodGet](#)& Optimisation method.  
*const* [HistoricalDataLimit\\_T](#)& Historical Data Limit  
*const* [ControlMode\\_T](#)& Control Mode  
*const* [PartnershipTechnique](#)& Partnership method.

Definition at line 38 of file [AirlineFeature.cpp](#).

References [\\_controlMode](#), [\\_forecastingMethod](#), [\\_historicalDataLimit](#), [\\_optimisationMethod](#), [\\_partnershipTechnique](#), [\\_preOptimisationMethod](#), and [\\_unconstrainingMethod](#).

**32.3.4.14** void stdair::AirlineFeature::setForecastingMethod (const ForecastingMethod & *iForecastingMethod*) [inline]

Set the forecasting method.

Definition at line 150 of file [AirlineFeature.hpp](#).

References [\\_forecastingMethod](#).

Referenced by [stdair::ConfigHolderStruct::updateAirlineFeatures\(\)](#).

**32.3.4.15** void stdair::AirlineFeature::setUnconstrainingMethod (const UnconstrainingMethod & *iUnconstrainingMethod*) [inline]

Set the unconstraining method.

Definition at line 157 of file [AirlineFeature.hpp](#).

References [\\_unconstrainingMethod](#).

Referenced by [stdair::ConfigHolderStruct::updateAirlineFeatures\(\)](#).

**32.3.4.16** void stdair::AirlineFeature::setPartnershipTechnique (const PartnershipTechnique & *iPartnershipTechnique*) [inline]

Set the partnership technique.

Definition at line 164 of file [AirlineFeature.hpp](#).

References [\\_partnershipTechnique](#).

Referenced by [stdair::ConfigHolderStruct::updateAirlineFeatures\(\)](#).

#### 32.3.4.17 void stdair::AirlineFeature::setPreOptimisationMethod (const PreOptimisationMethod & iPreOptimisationMethod) [inline]

Set the pre-optimisation method.

Definition at line 171 of file [AirlineFeature.hpp](#).

References [\\_preOptimisationMethod](#).

Referenced by [stdair::ConfigHolderStruct::updateAirlineFeatures\(\)](#).

#### 32.3.4.18 void stdair::AirlineFeature::setOptimisationMethod (const OptimisationMethod & iOptimisationMethod) [inline]

Set the optimisation method.

Definition at line 178 of file [AirlineFeature.hpp](#).

References [\\_optimisationMethod](#).

Referenced by [stdair::ConfigHolderStruct::updateAirlineFeatures\(\)](#).

### 32.3.5 Friends And Related Function Documentation

#### 32.3.5.1 friend class FacBom [friend]

Definition at line 26 of file [AirlineFeature.hpp](#).

#### 32.3.5.2 friend class FacCloneBom [friend]

Definition at line 27 of file [AirlineFeature.hpp](#).

#### 32.3.5.3 friend class FacBomManager [friend]

Definition at line 28 of file [AirlineFeature.hpp](#).

### 32.3.6 Member Data Documentation

#### 32.3.6.1 Key\_T stdair::AirlineFeature::\_key [protected]

Primary key (date period).

Definition at line 209 of file [AirlineFeature.hpp](#).

Referenced by [describeKey\(\)](#), and [getKey\(\)](#).

#### 32.3.6.2 BomAbstract\* stdair::AirlineFeature::\_parent [protected]

Pointer on the parent class.

Definition at line 214 of file [AirlineFeature.hpp](#).

Referenced by [getParent\(\)](#).

#### 32.3.6.3 HolderMap\_T stdair::AirlineFeature::\_holderMap [protected]

Map holding the children.

Definition at line 219 of file [AirlineFeature.hpp](#).

Referenced by [getHolderMap\(\)](#).

#### 32.3.6.4 ForecastingMethod stdair::AirlineFeature::\_forecastingMethod [protected]

The type of forecaster.

Definition at line 224 of file [AirlineFeature.hpp](#).

Referenced by [getForecastingMethod\(\)](#), [init\(\)](#), [setForecastingMethod\(\)](#), and [toString\(\)](#).

#### 32.3.6.5 HistoricalDataLimit\_T stdair::AirlineFeature::\_historicalDataLimit [protected]

The size of the moving average window.

Definition at line 229 of file [AirlineFeature.hpp](#).

Referenced by [init\(\)](#), and [toString\(\)](#).

#### 32.3.6.6 ControlMode\_T stdair::AirlineFeature::\_controlMode [protected]

The type of inventory control.

Definition at line 234 of file [AirlineFeature.hpp](#).

Referenced by [init\(\)](#).

#### 32.3.6.7 UnconstrainingMethod stdair::AirlineFeature::\_unconstrainingMethod [protected]

The type of unconstraining method.

Definition at line 239 of file [AirlineFeature.hpp](#).

Referenced by [getUnconstrainingMethod\(\)](#), [init\(\)](#), [setUnconstrainingMethod\(\)](#), and [toString\(\)](#).

#### 32.3.6.8 PreOptimisationMethod stdair::AirlineFeature::\_preOptimisationMethod [protected]

The type of pre-optimisation method.

Definition at line 244 of file [AirlineFeature.hpp](#).

Referenced by [getPreOptimisationMethod\(\)](#), [init\(\)](#), [setPreOptimisationMethod\(\)](#), and [toString\(\)](#).

#### 32.3.6.9 OptimisationMethod stdair::AirlineFeature::\_optimisationMethod [protected]

The type of optimisation method.

Definition at line 249 of file [AirlineFeature.hpp](#).

Referenced by [getOptimisationMethod\(\)](#), [init\(\)](#), [setOptimisationMethod\(\)](#), and [toString\(\)](#).

### 32.3.6.10 PartnershipTechnique stdair::AirlineFeature::\_partnershipTechnique [protected]

The type of partnership technique.

Definition at line 254 of file [AirlineFeature.hpp](#).

Referenced by [getPartnershipTechnique\(\)](#), [init\(\)](#), [setPartnershipTechnique\(\)](#), and [toString\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/bom/AirlineFeature.hpp](#)
- [stdair/bom/AirlineFeature.cpp](#)

## 32.4 stdair::AirlineFeatureKey Struct Reference

### 32.4.1 Detailed Description

Key of [AirlineFeature](#).

Definition at line 15 of file [AirlineFeatureKey.hpp](#).

### 32.4.2 Constructor & Destructor Documentation

#### 32.4.2.1 stdair::AirlineFeatureKey::AirlineFeatureKey (const AirlineCode\_T &iAirlineCode)

Constructor.

Definition at line 12 of file [AirlineFeatureKey.cpp](#).

#### 32.4.2.2 stdair::AirlineFeatureKey::~~AirlineFeatureKey ()

Destructor.

Definition at line 17 of file [AirlineFeatureKey.cpp](#).

#### 32.4.3 Member Function Documentation

##### 32.4.3.1 const AirlineCode\_T& stdair::AirlineFeatureKey::getAirlineCode () const [inline]

Get the airline code.

Definition at line 27 of file [AirlineFeatureKey.hpp](#).

##### 32.4.3.2 void stdair::AirlineFeatureKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

###### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 21 of file [AirlineFeatureKey.cpp](#).

References [toString\(\)](#).

##### 32.4.3.3 void stdair::AirlineFeatureKey::fromStream (std::istream & ioIn) [virtual]

Read a Business Object Key from an input stream.

###### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 26 of file [AirlineFeatureKey.cpp](#).

##### 32.4.3.4 const std::string stdair::AirlineFeatureKey::toString () const [virtual]

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-date.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 30 of file [AirlineFeatureKey.cpp](#).

Referenced by [stdair::AirlineFeature::describeKey\(\)](#), and [toStream\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/AirlineFeatureKey.hpp](#)
- [stdair/bom/AirlineFeatureKey.cpp](#)

## 32.5 stdair::AirlineStruct Struct Reference

### 32.5.1 Detailed Description

Structure holding parameters describing an airline.

Definition at line 18 of file [AirlineStruct.hpp](#).

### 32.5.2 Constructor & Destructor Documentation

#### 32.5.2.1 stdair::AirlineStruct::AirlineStruct (const AirlineCode\_T & iAirlineCode, const std::string & iAirlineName)

Main constructor.

Definition at line 24 of file [AirlineStruct.cpp](#).

#### 32.5.2.2 stdair::AirlineStruct::AirlineStruct ()

Default constructor.

Definition at line 15 of file [AirlineStruct.cpp](#).

#### 32.5.2.3 stdair::AirlineStruct::AirlineStruct (const AirlineStruct & iAirlineStruct)

Default copy constructor.

Definition at line 19 of file [AirlineStruct.cpp](#).

#### 32.5.2.4 stdair::AirlineStruct::~~AirlineStruct ()

Destructor.

Definition at line 30 of file [AirlineStruct.cpp](#).

### 32.5.3 Member Function Documentation

#### 32.5.3.1 const AirlineCode\_T& stdair::AirlineStruct::getAirlineCode () const [inline]

Get the airline code.

Definition at line 22 of file [AirlineStruct.hpp](#).

Referenced by [soci::type\\_conversion< stdair::AirlineStruct >::to\\_base\(\)](#), and [stdair::DBManagerForAirlines::updateAirlineInDB\(\)](#).

#### 32.5.3.2 const std::string& stdair::AirlineStruct::getAirlineName () const [inline]

Get the airline name.

Definition at line 27 of file [AirlineStruct.hpp](#).

Referenced by [soci::type\\_conversion< stdair::AirlineStruct >::to\\_base\(\)](#), and [stdair::DBManagerForAirlines::updateAirlineInDB\(\)](#).

#### 32.5.3.3 void stdair::AirlineStruct::setAirlineCode (const AirlineCode\_T & iAirlineCode) [inline]

Set the airline code.

Definition at line 33 of file [AirlineStruct.hpp](#).

Referenced by [soci::type\\_conversion< stdair::AirlineStruct >::from\\_base\(\)](#).

#### 32.5.3.4 void stdair::AirlineStruct::setAirlineName (const std::string & iAirlineName) [inline]

Set the airline name.

Definition at line 38 of file [AirlineStruct.hpp](#).

Referenced by [soci::type\\_conversion< stdair::AirlineStruct >::from\\_base\(\)](#).

#### 32.5.3.5 void stdair::AirlineStruct::toStream (std::ostream & ioOut) const

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 34 of file [AirlineStruct.cpp](#).

References [describe\(\)](#).

### 32.5.3.6 void stdair::AirlineStruct::fromStream (std::istream & ioIn) [virtual]

Read a Business Object from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 39 of file [AirlineStruct.cpp](#).

### 32.5.3.7 const std::string stdair::AirlineStruct::describe () const [virtual]

Display of the structure.

Implements [stdair::StructAbstract](#).

Definition at line 43 of file [AirlineStruct.cpp](#).

Referenced by [toStream\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/AirlineStruct.hpp](#)
- [stdair/bom/AirlineStruct.cpp](#)

## 32.6 stdair::AirportPair Class Reference

Class representing the actual attributes for an airport-pair.

#include <stdair/bom/AirportPair.hpp> Inheritance diagram for stdair::AirportPair:

#### Public Types

- typedef [AirportPairKey](#) Key\_T

#### Public Member Functions

#### 32.6.1 Detailed Description

Class representing the actual attributes for an airport-pair.

Definition at line 18 of file [AirportPair.hpp](#).

#### 32.6.2 Member Typedef Documentation

##### 32.6.2.1 typedef AirportPairKey stdair::AirportPair::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 28 of file [AirportPair.hpp](#).

#### 32.6.3 Constructor & Destructor Documentation

##### 32.6.3.1 stdair::AirportPair::AirportPair (const Key\_T & iKey) [protected]

Main constructor.

Definition at line 27 of file [AirportPair.cpp](#).

##### 32.6.3.2 stdair::AirportPair::~~AirportPair () [protected, virtual]

Destructor.

Definition at line 32 of file [AirportPair.cpp](#).

#### 32.6.4 Member Function Documentation

##### 32.6.4.1 void stdair::AirportPair::toStream (std::ostream & ioOut) const [inline, virtual]

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 37 of file [AirportPair.hpp](#).

References [toString\(\)](#).

**32.6.4.2 void stdair::AirportPair::fromStream (std::istream & ioIn) [inline, virtual]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 46 of file [AirportPair.hpp](#).

**32.6.4.3 std::string stdair::AirportPair::toString () const [virtual]**

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 36 of file [AirportPair.cpp](#).

References [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

**32.6.4.4 const std::string stdair::AirportPair::describeKey () const [inline]**

Get a string describing the key.

Definition at line 57 of file [AirportPair.hpp](#).

References [\\_key](#), and [stdair::AirportPairKey::toString\(\)](#).

Referenced by [toString\(\)](#).

**32.6.4.5 const Key\_T& stdair::AirportPair::getKey () const [inline]**

Get the primary key (origin airport, destination airport).

Definition at line 66 of file [AirportPair.hpp](#).

References [\\_key](#).

**32.6.4.6 const AirportCode\_T& stdair::AirportPair::getBoardingPoint () const [inline]**

Get the origin airport.

Definition at line 73 of file [AirportPair.hpp](#).

References [\\_key](#), and [stdair::AirportPairKey::getBoardingPoint\(\)](#).

#### 32.6.4.7 const AirportCode\_T& stdair::AirportPair::getOffPoint () const [inline]

Get the destination airport.

Definition at line 80 of file [AirportPair.hpp](#).

References [\\_key](#), and [stdair::AirportPairKey::getOffPoint\(\)](#).

#### 32.6.4.8 BomAbstract\* const stdair::AirportPair::getParent () const [inline]

Get a reference on the parent object instance.

Definition at line 87 of file [AirportPair.hpp](#).

References [\\_parent](#).

#### 32.6.4.9 const HolderMap\_T& stdair::AirportPair::getHolderMap () const [inline]

Get a reference on the children holder.

Definition at line 94 of file [AirportPair.hpp](#).

References [\\_holderMap](#).

### 32.6.5 Friends And Related Function Documentation

#### 32.6.5.1 friend class FacBom [friend]

Definition at line 19 of file [AirportPair.hpp](#).

#### 32.6.5.2 friend class FacCloneBom [friend]

- void [fromStream](#) (std::istream &ioIn)
- const std::string [toString](#) () const

### 32.7.1 Detailed Description

Key of airport-pair.

Definition at line 16 of file [AirportPairKey.hpp](#).

### 32.7.2 Constructor & Destructor Documentation

#### 32.7.2.1 stdair::AirportPairKey::AirportPairKey (const stdair::AirportCode\_T & *iBoardingPoint*, const stdair::AirportCode\_T & *iOffPoint*)

Main constructor.

Definition at line 22 of file [AirportPairKey.cpp](#).

#### 32.7.2.2 stdair::AirportPairKey::AirportPairKey (const AirportPairKey & *iKey*)

Copy constructor.

Definition at line 28 of file [AirportPairKey.cpp](#).

#### 32.7.2.3 stdair::AirportPairKey::~~AirportPairKey ()

Destructor.

Definition at line 34 of file [AirportPairKey.cpp](#).

### 32.7.3 Member Function Documentation

#### 32.7.3.1 const stdair::AirportCode\_T& stdair::AirportPairKey::getBoardingPoint () const [inline]

Get the boarding point.

Definition at line 36 of file [AirportPairKey.hpp](#).

Referenced by [stdair::AirportPair::getBoardingPoint\(\)](#).

#### 32.7.3.2 const stdair::AirportCode\_T& stdair::AirportPairKey::getOffPoint () const [inline]

Get the arrival point.

Definition at line 43 of file [AirportPairKey.hpp](#).

Referenced by [stdair::AirportPair::getOffPoint\(\)](#).

#### 32.7.3.3 void stdair::AirportPairKey::toStream (std::ostream & *ioOut*) const [virtual]

Dump a Business Object Key into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 38 of file [AirportPairKey.cpp](#).

References [toString\(\)](#).

**32.7.3.4 void stdair::AirportPairKey::fromStream (std::istream & ioIn) [virtual]**

Read a Business Object Key from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 43 of file [AirportPairKey.cpp](#).

**32.7.3.5 const std::string stdair::AirportPairKey::toString () const [virtual]**

Get the serialised version of the Business Object Key. That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 47 of file [AirportPairKey.cpp](#).

References [stdair::DEFAULT\\_KEY\\_SUB\\_FLD\\_DELIMITER](#).

Referenced by [stdair::AirportPair::describeKey\(\)](#), [stdair::BomRetriever::retrieveAirportPairFromKeySet\(\)](#), and [toString\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/AirportPairKey.hpp](#)
- [stdair/bom/AirportPairKey.cpp](#)

**32.8 stdair::BasChronometer Struct Reference**

```
#include <stdair/basic/BasChronometer.hpp>
```

**Public Member Functions**

- [BasChronometer \(\)](#)
- void [start \(\)](#)
- std::string [getStart \(\)](#) const
- double [elapsed \(\)](#) const

**32.8.1 Detailed Description**

Structure allowing measuring the time elapsed between two events.

Definition at line 14 of file [BasChronometer.hpp](#).

**32.8.2 Constructor & Destructor Documentation****32.8.2.1 stdair::BasChronometer::BasChronometer ()**

Constructor.

Definition at line 12 of file [BasChronometer.cpp](#).

### 32.8.3 Member Function Documentation

#### 32.8.3.1 void stdair::BasChronometer::start ()

Start the chronometer from the local time

The elapsed time given is the one elapsed since the start is launched.

Definition at line 16 of file [BasChronometer.cpp](#).

#### 32.8.3.2 std::string stdair::BasChronometer::getStart () const [inline]

Get the start time.

Definition at line 24 of file [BasChronometer.hpp](#).

#### 32.8.3.3 double stdair::BasChronometer::elapsed () const

Return the time elapsed since the structure has been instanciated.

That elapsed time is expressed in seconds.

Definition at line 26 of file [BasChronometer.cpp](#).

The documentation for this struct was generated from the following files:

- [stdair/basic/BasChronometer.hpp](#)
- [stdair/basic/BasChronometer.cpp](#)

## 32.9 stdair::BasDBParams Struct Reference

Structure holding the parameters for connection to a database.

`#include <stdair/basic/BasDBParams.hpp>` Inheritance diagram for stdair::BasDBParams::

### Public Member Functions

### 32.9.1 Detailed Description

Structure holding the parameters for connection to a database.

Definition at line 19 of file [BasDBParams.hpp](#).

### 32.9.2 Constructor & Destructor Documentation

#### 32.9.2.1 stdair::BasDBParams::BasDBParams (const std::string &iDBUser, const std::string &iDBPasswd, const std::string &iDBHost, const std::string &iDBPort, const std::string &iDBName)

Main Constructor.

Definition at line 24 of file [BasDBParams.cpp](#).

#### 32.9.2.2 stdair::BasDBParams::BasDBParams ()

Default Constructor.

Definition at line 13 of file [BasDBParams.cpp](#).

#### 32.9.2.3 stdair::BasDBParams::BasDBParams (const BasDBParams &iDBParams)

Default copy constructor.

Definition at line 17 of file [BasDBParams.cpp](#).

#### 32.9.2.4 stdair::BasDBParams::~~BasDBParams ()

Destructor.

Definition at line 34 of file [BasDBParams.cpp](#).

### 32.9.3 Member Function Documentation

#### 32.9.3.1 const std::string& stdair::BasDBParams::getUser () const [inline]

Get the database user name.

Definition at line 23 of file [BasDBParams.hpp](#).

**32.9.3.2 const std::string& stdair::BasDBParams::getPassword () const [inline]**

Get the database user password.

Definition at line 28 of file [BasDBParams.hpp](#).

**32.9.3.3 const std::string& stdair::BasDBParams::getHost () const [inline]**

Get the database host name.

Definition at line 33 of file [BasDBParams.hpp](#).

**32.9.3.4 const std::string& stdair::BasDBParams::getPort () const [inline]**

Get the database port number.

Definition at line 38 of file [BasDBParams.hpp](#).

**32.9.3.5 const std::string& stdair::BasDBParams::getDBName () const [inline]**

Get the database name.

Definition at line 43 of file [BasDBParams.hpp](#).

**32.9.3.6 void stdair::BasDBParams::setUser (const std::string & iUser) [inline]**

Set the database user name.

Definition at line 50 of file [BasDBParams.hpp](#).

**32.9.3.7 void stdair::BasDBParams::setPassword (const std::string & iPasswd) [inline]**

Set the database password.

Definition at line 55 of file [BasDBParams.hpp](#).

**32.9.3.8 void stdair::BasDBParams::setHost (const std::string & iHost) [inline]**

Set the database host name.

Definition at line 60 of file [BasDBParams.hpp](#).

**32.9.3.9 void stdair::BasDBParams::setPort (const std::string & iPort) [inline]**

Set the database port number.

Definition at line 65 of file [BasDBParams.hpp](#).

**32.9.3.10 void stdair::BasDBParams::setDBName (const std::string & iDBName) [inline]**

Set the database name.

Definition at line 70 of file [BasDBParams.hpp](#).

**32.9.3.11 bool stdair::BasDBParams::check () const**

Check that all the parameters are fine.

Definition at line 57 of file [BasDBParams.cpp](#).

**32.9.3.12 const std::string stdair::BasDBParams::describe () const [virtual]**

Get the serialised version of the DBParams structure.

Implements [stdair::StructAbstract](#).

Definition at line 38 of file [BasDBParams.cpp](#).

References [toString\(\)](#).

**32.9.3.13 std::string stdair::BasDBParams::toShortString () const**

Get a short display of the DBParams structure.

Definition at line 43 of file [BasDBParams.cpp](#).

**32.9.3.14 std::string stdair::BasDBParams::toString () const**

Get the serialised version of the DBParams structure.

Definition at line 50 of file [BasDBParams.cpp](#).

Referenced by [describe\(\)](#).

**32.9.3.15 void stdair::StructAbstract::toStream (std::ostream & ioOut) const [inline, inherited]**

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 29 of file [StructAbstract.hpp](#).

References [stdair::StructAbstract::describe\(\)](#).

**32.9.3.16 virtual void stdair::StructAbstract::fromStream (std::istream & ioIn) [inline, virtual, inherited]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented in [stdair::ProgressStatusSet](#), [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::EventStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

## Friends

- class [Logger](#)

### 32.11.1 Detailed Description

Structure holding parameters for logging.

Definition at line 19 of file [BasLogParams.hpp](#).

### 32.11.2 Constructor & Destructor Documentation

#### 32.11.2.1 stdair::BasLogParams::BasLogParams (const [LOG::EN\\_LogLevel](#) iLogLevel, std::ostream & ioLogOutputStream, const bool iForceMultipleInstance = false)

Main Constructor.

#### Parameters:

- ← **const** [LOG::EN\\_LogLevel](#) Level of the log (e.g., DEBUG)
- ← **std::ostream&** (STL) Stream to log into.
- ← **const** bool Whether or not multiple initialisation should be forced.

Definition at line 27 of file [BasLogParams.cpp](#).

### 32.11.2.2 stdair::BasLogParams::BasLogParams (const BasLogParams & *iLogParams*)

Copy constructor.

Definition at line 21 of file [BasLogParams.cpp](#).

### 32.11.2.3 stdair::BasLogParams::~~BasLogParams ()

Destructor.

Definition at line 35 of file [BasLogParams.cpp](#).

## 32.11.3 Member Function Documentation

### 32.11.3.1 const LOG::EN\_LogLevel& stdair::BasLogParams::getLogLevel () const [inline]

Get the log level.

Definition at line 26 of file [BasLogParams.hpp](#).

### 32.11.3.2 std::ostream& stdair::BasLogParams::getLogStream () const [inline]

Get the log output stream.

Definition at line 33 of file [BasLogParams.hpp](#).

### 32.11.3.3 const bool stdair::BasLogParams::getForcedInitialisationFlag () const [inline]

State whether or not multiple initialisations are to be forced.

Definition at line 40 of file [BasLogParams.hpp](#).

### 32.11.3.4 void stdair::BasLogParams::setForcedInitialisationFlag (const bool *iForceMultipleInstance*) [inline]

State whether or not multiple initialisations are to be forced.

Definition at line 49 of file [BasLogParams.hpp](#).

### 32.11.3.5 bool stdair::BasLogParams::check () const

Check that all the parameters are fine.

### 32.11.3.6 const std::string stdair::BasLogParams::describe () const [virtual]

Get the serialised version of the DBParams structure.

Implements [stdair::StructAbstract](#).

Definition at line 39 of file [BasLogParams.cpp](#).

References [toString\(\)](#).

**32.11.3.7 std::string stdair::BasLogParams::toShortString () const**

Get a short display of the LOGParams structure.

Definition at line 44 of file [BasLogParams.cpp](#).

References [stdair::LOG::\\_logLevels](#).

**32.11.3.8 std::string stdair::BasLogParams::toString () const**

Get the serialised version of the LOGParams structure.

Definition at line 52 of file [BasLogParams.cpp](#).

References [stdair::LOG::\\_logLevels](#).

Referenced by [describe\(\)](#).

**32.11.3.9 void stdair::StructAbstract::toStream (std::ostream & ioOut) const [inline, inherited]**

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 29 of file [StructAbstract.hpp](#).

References [stdair::StructAbstract::describe\(\)](#).

**32.11.3.10 virtual void stdair::StructAbstract::fromStream (std::istream & ioIn) [inline, virtual, inherited]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented in [stdair::ProgressStatusSet](#), [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::EventStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 38 of file [StructAbstract.hpp](#).

Referenced by [operator>>\(\)](#).

### 32.11.4 Friends And Related Function Documentation

#### 32.11.4.1 friend class Logger [friend]

Definition at line 20 of file [BasLogParams.hpp](#).

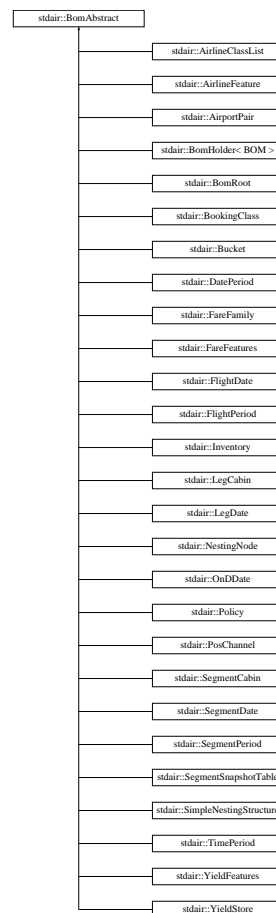

The documentation for this struct was generated from the following files:

- [stdair/basic/BasLogParams.hpp](#)
- [stdair/basic/BasLogParams.cpp](#)

## 32.12 stdair::BomAbstract Class Reference

Base class for the Business Object Model (BOM) layer.

`#include <stdair/bom/BomAbstract.hpp>` Inheritance diagram for stdair::BomAbstract::

### Public Member Functions

- virtual void [toStream](#) (std::ostream &ioOut) const =0
- virtual void [fromStream](#) (std::istream &ioIn)=0

- virtual std::string [toString](#) () const =0
- virtual [~BomAbstract](#) ()

### Protected Member Functions

- [BomAbstract](#) ()
- [BomAbstract](#) (const [BomAbstract](#) &)

#### 32.12.1 Detailed Description

Base class for the Business Object Model (BOM) layer.

Definition at line 24 of file [BomAbstract.hpp](#).

#### 32.12.2 Constructor & Destructor Documentation

##### 32.12.2.1 stdair::BomAbstract::BomAbstract () [[inline](#), [protected](#)]

Protected Default Constructor to ensure this class is abstract.

Definition at line 53 of file [BomAbstract.hpp](#).

##### 32.12.2.2 stdair::BomAbstract::BomAbstract (const BomAbstract &) [[inline](#), [protected](#)]

Definition at line 54 of file [BomAbstract.hpp](#).

##### 32.12.2.3 virtual stdair::BomAbstract::~~BomAbstract () [[inline](#), [virtual](#)]

Destructor.

Definition at line 59 of file [BomAbstract.hpp](#).

#### 32.12.3 Member Function Documentation

##### 32.12.3.1 virtual void stdair::BomAbstract::toStream (std::ostream & *ioOut*) const [[pure virtual](#)]

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* The input/output stream.

Implemented in [stdair::AirlineClassList](#), [stdair::AirlineFeature](#), [stdair::AirportPair](#), [stdair::BomHolder< BOM >](#), [stdair::BomRoot](#), [stdair::BookingClass](#), [stdair::Bucket](#), [stdair::DatePeriod](#), [stdair::FareFamily](#), [stdair::FareFeatures](#), [stdair::FlightDate](#), [stdair::FlightPeriod](#), [stdair::Inventory](#), [stdair::LegCabin](#), [stdair::LegDate](#), [stdair::NestingNode](#), [stdair::OnDDate](#), [stdair::Policy](#), [stdair::PosChannel](#), [stdair::SegmentCabin](#), [stdair::SegmentDate](#), [stdair::SegmentPeriod](#), [stdair::SegmentSnapshotTable](#), [stdair::SimpleNestingStructure](#), [stdair::TimePeriod](#), [stdair::YieldFeatures](#), and [stdair::YieldStore](#).

### 32.12.3.2 virtual void stdair::BomAbstract::fromStream (std::istream & ioIn) [pure virtual]

Read a Business Object from an input stream.

#### Parameters:

*istream&* The input stream.

Implemented in [stdair::AirlineClassList](#), [stdair::AirlineFeature](#), [stdair::AirportPair](#), [stdair::BomHolder<BOM>](#), [stdair::BomRoot](#), [stdair::BookingClass](#), [stdair::Bucket](#), [stdair::DatePeriod](#), [stdair::FareFamily](#), [stdair::FareFeatures](#), [stdair::FlightDate](#), [stdair::FlightPeriod](#), [stdair::Inventory](#), [stdair::LegCabin](#), [stdair::LegDate](#), [stdair::NestingNode](#), [stdair::OnDDate](#), [stdair::Policy](#), [stdair::PosChannel](#), [stdair::SegmentCabin](#), [stdair::SegmentDate](#), [stdair::SegmentPeriod](#), [stdair::SegmentSnapshotTable](#), [stdair::SimpleNestingStructure](#), [stdair::TimePeriod](#), [stdair::YieldFeatures](#), and [stdair::YieldStore](#).

Referenced by [operator>>\(\)](#).

### 32.12.3.3 virtual std::string stdair::BomAbstract::toString () const [pure virtual]

Get the serialised version of the Business Object.

#### Returns:

std::string The output string

Implemented in [stdair::AirlineClassList](#), [stdair::AirlineFeature](#), [stdair::AirportPair](#), [stdair::BomHolder<BOM>](#), [stdair::BomRoot](#), [stdair::BookingClass](#), [stdair::Bucket](#), [stdair::DatePeriod](#), [stdair::FareFamily](#), [stdair::FareFeatures](#), [stdair::FlightDate](#), [stdair::FlightPeriod](#), [stdair::Inventory](#), [stdair::LegCabin](#), [stdair::LegDate](#), [stdair::NestingNode](#), [stdair::OnDDate](#), [stdair::Policy](#), [stdair::PosChannel](#), [stdair::SegmentCabin](#), [stdair::SegmentDate](#), [stdair::SegmentPeriod](#), [stdair::SegmentSnapshotTable](#), [stdair::SimpleNestingStructure](#), [stdair::TimePeriod](#), [stdair::YieldFeatures](#), and [stdair::YieldStore](#).

The documentation for this class was generated from the following file:

- [stdair/bom/BomAbstract.hpp](#)

## 32.13 stdair::BomArchive Class Reference

Utility class to archive/restore BOM objects with Boost serialisation.

```
#include <stdair/bom/BomArchive.hpp>
```

### Static Public Member Functions

- static void [archive](#) (const [BomRoot](#) &)
- static std::string [archive](#) (const [Inventory](#) &)
- static void [restore](#) (const std::string &iArchive, [Inventory](#) &)
- static void [archive](#) (const [FlightDate](#) &)

### 32.13.1 Detailed Description

Utility class to archive/restore BOM objects with Boost serialisation.

Definition at line 28 of file [BomArchive.hpp](#).

### 32.13.2 Member Function Documentation

#### 32.13.2.1 void stdair::BomArchive::archive (const BomRoot & iBomRoot) [static]

Recursively archive (dump in the underlying STL string) the objects of the BOM tree.

**Parameters:**

*const* [BomRoot](#)& Root of the BOM tree to be archived.

Definition at line 32 of file [BomArchive.cpp](#).

#### 32.13.2.2 std::string stdair::BomArchive::archive (const Inventory & iInventory) [static]

Recursively archive (dump in the underlying STL string) the objects of the BOM tree.

**Parameters:**

*const* [Inventory](#)& Root of the BOM tree to be archived.

Definition at line 36 of file [BomArchive.cpp](#).

#### 32.13.2.3 void stdair::BomArchive::restore (const std::string & iArchive, Inventory & ioInventory) [static]

Recursively restore (from the underlying STL string) the objects of the BOM tree.

**Parameters:**

*const* std::string& String holding the serialised objects.

*Inventory*& Root of the BOM tree to be restored.

Definition at line 44 of file [BomArchive.cpp](#).

#### 32.13.2.4 void stdair::BomArchive::archive (const FlightDate & iFlightDate) [static]

Recursively archive (dump in the underlying STL string) the objects of the BOM tree.

**Parameters:**

*const* [FlightDate](#)& Root of the BOM tree to be archived.

Definition at line 52 of file [BomArchive.cpp](#).

The documentation for this class was generated from the following files:

- [stdair/bom/BomArchive.hpp](#)
- [stdair/bom/BomArchive.cpp](#)

## 32.14 stdair::BomDisplay Class Reference

Utility class to display StdAir objects with a pretty format.

```
#include <stdair/bom/BomDisplay.hpp>
```

### Static Public Member Functions

- static void `list` (std::ostream &, const `BomRoot` &, const `AirlineCode_T` & `iAirlineCode`="all", const `FlightNumber_T` & `iFlightNumber`=0)

#### 32.14.1 Detailed Description

Utility class to display StdAir objects with a pretty format.

Definition at line 38 of file `BomDisplay.hpp`.

#### 32.14.2 Member Function Documentation

**32.14.2.1** static void `stdair::BomDisplay::list` (std::ostream &, const `BomRoot` &, const `AirlineCode_T` & `iAirlineCode` = "all", const `FlightNumber_T` & `iFlightNumber` = 0)  
[static]

Display (dump in the underlying output log stream) the list of flight-dates contained within the given BOM tree.

#### Parameters:

*std::ostream&* Output stream in which the flight-date keys should be logged/dumped.

**const** [BomRoot](#)& Root of the BOM tree to be displayed.

**const** [AirlineCode](#)& Airline for which the flight-dates should be displayed. If set to "all" (default), all the inventories will be displayed.

**const** [FlightNumber\\_T](#)& Flight number for which all the departure dates should be displayed. If set to 0 (the default), all the flight numbers will be displayed.

#### 32.14.2.2 static void stdair::BomDisplay::list (std::ostream &, const Inventory &, const unsigned short iInventoryIndex = 0, const FlightNumber\_T & iFlightNumber = 0) [static]

Display (dump in the underlying output log stream) the list of flight-dates contained within the given BOM tree.

##### Parameters:

**std::ostream&** Output stream in which the flight-date keys should be logged/dumped.

**const** [Inventory](#)& Root of the BOM tree to be displayed.

**const** unsigned short Index, within the list, of the inventory. It is 0 when that inventory is displayed alone.

**const** [FlightNumber\\_T](#)& Flight number for which all the departure dates should be displayed. If set to 0 (the default), all the flight numbers will be displayed.

#### 32.14.2.3 static void stdair::BomDisplay::listAirportPairDateRange (std::ostream &, const BomRoot &) [static]

Display the list of airports pairs and date ranges (contained within the BOM tree)

##### Parameters:

**std::ostream&** Output stream in which the airport pairs and date ranges are logged/dumped.

**const** [BomRoot](#)& Root of the BOM tree to be displayed.

#### 32.14.2.4 static void stdair::BomDisplay::csvDisplay (std::ostream &, const BomRoot &) [static]

Recursively display (dump in the underlying output log stream) the objects of the BOM tree.

##### Parameters:

**std::ostream&** Output stream in which the BOM tree should be logged/dumped.

**const** [BomRoot](#)& Root of the BOM tree to be displayed.

#### 32.14.2.5 static void stdair::BomDisplay::csvDisplay (std::ostream &, const Inventory &) [static]

Recursively display (dump in the underlying output log stream) the objects of the BOM tree from the level of the given [Inventory](#).

##### Parameters:

**std::ostream&** Output stream in which the BOM tree should be logged/dumped.

**const** [Inventory](#)& Root of the BOM tree to be displayed.

#### 32.14.2.6 static void stdair::BomDisplay::csvDisplay (std::ostream &, const OnDDate &) [static]

Display the O&D date object information.

##### Parameters:

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.

*const OnDDate&* the BOM to be displayed.

#### 32.14.2.7 static void stdair::BomDisplay::csvDisplay (std::ostream &, const FlightDate &) [static]

Recursively display (dump in the underlying output log stream) the objects of the BOM tree from the level of the given [FlightDate](#).

##### Parameters:

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.

*const FlightDate&* Root of the BOM tree to be displayed.

#### 32.14.2.8 static void stdair::BomDisplay::csvLegDateDisplay (std::ostream &, const FlightDate &) [static]

Recursively display (dump in the underlying output log stream) the leg-date level objects of the BOM tree.

##### Parameters:

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.

*const FlightDate&* Root of the BOM tree to be displayed.

#### 32.14.2.9 static void stdair::BomDisplay::csvSegmentDateDisplay (std::ostream &, const FlightDate &) [static]

Recursively display (dump in the underlying output log stream) the segment-date level objects of the BOM tree.

##### Parameters:

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.

*const FlightDate&* Root of the BOM tree to be displayed.

#### 32.14.2.10 static void stdair::BomDisplay::csvLegCabinDisplay (std::ostream &, const FlightDate &) [static]

Recursively display (dump in the underlying output log stream) the leg-cabin level objects of the BOM tree.

**Parameters:**

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.

*const FlightDate&* Root of the BOM tree to be displayed.

**32.14.2.11 static void stdair::BomDisplay::csvSegmentCabinDisplay (std::ostream &, const FlightDate &) [static]**

Recursively display (dump in the underlying output log stream) the segment-cabin level objects of the BOM tree.

**Parameters:**

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.

*const FlightDate&* Root of the BOM tree to be displayed.

**32.14.2.12 static void stdair::BomDisplay::csvFareFamilyDisplay (std::ostream &, const FlightDate &) [static]**

Recursively display (dump in the underlying output log stream) the fare families level objects of the BOM tree.

**Parameters:**

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.

*const FlightDate&* Root of the BOM tree to be displayed.

**32.14.2.13 static void stdair::BomDisplay::csvBucketDisplay (std::ostream &, const FlightDate &) [static]**

Recursively display (dump in the underlying output log stream) the bucket holder level objects of the BOM tree.

**Parameters:**

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.

*const FlightDate&* Root of the BOM tree to be displayed.

**32.14.2.14 static void stdair::BomDisplay::csvBookingClassDisplay (std::ostream &, const BookingClass &, const std::string & iLeadingString) [static]**

Display (dump in the underlying output log stream) the segment-class, without going recursively deeper in the BOM tree.

**Parameters:**

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.

*const BookingClass&* Root of the BOM tree to be displayed.

*const std::string&* Leading string to be displayed.

**32.14.2.15 static void stdair::BomDisplay::csvBookingClassDisplay (std::ostream &, const FlightDate &) [static]**

Recursively display (dump in the underlying output log stream) the segment-class level objects of the BOM tree.

**Parameters:**

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.  
*const FlightDate&* Root of the BOM tree to be displayed.

**32.14.2.16 static void stdair::BomDisplay::csvDisplay (std::ostream &, const TravelSolutionList\_T &) [static]**

Display (dump in the underlying output log stream) the full list of travel solution structures.

**Parameters:**

*std::ostream&* Output stream in which the list of travel solutions is logged/dumped.  
*TravelSolutionList\_T&* List of travel solutions to display.

**32.14.2.17 static void stdair::BomDisplay::csvDisplay (std::ostream &, const DatePeriodList\_T &) [static]**

Display (dump in the underlying output log stream) the full list of date period fare rule sub bom tree.

**Parameters:**

*std::ostream&* Output stream in which the list of travel solutions is logged/dumped.  
*DatePeriodList\_T&* List of date period to display.

**32.14.2.18 static void stdair::BomDisplay::csvSimFQTAirRACDisplay (std::ostream &, const BomRoot &) [static]**

Recursively display (dump in the underlying output log stream) the objects of the BOM tree.

**Parameters:**

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.  
*const BomRoot&* Root of the BOM tree to be displayed.

**32.14.2.19 static void stdair::BomDisplay::csvAirportPairDisplay (std::ostream &, const AirportPair &) [static]**

Recursively display (dump in the underlying output log stream) the objects of the BOM tree from the level of the given airport pair.

**Parameters:**

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.  
*const AirportPair&* Root of the BOM tree to be displayed.

### 32.14.2.20 static void stdair::BomDisplay::csvDateDisplay (std::ostream &, const DatePeriod &) [static]

Recursively display (dump in the underlying output log stream) the objects of the BOM tree from the level of the given date range.

#### Parameters:

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.

*const DatePeriod&* Root of the BOM tree to be displayed.

### 32.14.2.21 static void stdair::BomDisplay::csvPosChannelDisplay (std::ostream &, const PosChannel &) [static]

Recursively display (dump in the underlying output log stream) the objects of the BOM tree from the level of the given point of sale channel.

#### Parameters:

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.

*const PosChannel&* Root of the BOM tree to be displayed.

### 32.14.2.22 static void stdair::BomDisplay::csvTimeDisplay (std::ostream &, const TimePeriod &) [static]

Recursively display (dump in the underlying output log stream) the objects of the BOM tree from the level of the given time range.

#### Parameters:

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.

*const TimePeriod&* Root of the BOM tree to be displayed.

### 32.14.2.23 template<typename FEATURE\_TYPE > static void stdair::BomDisplay::csvFeatureListDisplay (std::ostream & oStream, const TimePeriod &) [inline, static]

Recursively display (dump in the underlying output log stream) the list of fare/yield features objects of the BOM tree.

#### Parameters:

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.

*const TimePeriod&* Root of the BOM tree to be displayed.

**32.14.2.24** `template<typename FEATURE_TYPE > static void  
stdair::BomDisplay::csvFeaturesDisplay (std::ostream & oStream, const  
FEATURE_TYPE &) [inline, static]`

Recursively display (dump in the underlying output log stream) the fare/yield features objects of the BOM tree.

**Parameters:**

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.  
*const* *FEATURE\_TYPE&* Root of the BOM tree to be displayed.

**32.14.2.25** `static void stdair::BomDisplay::csvAirlineClassDisplay (std::ostream &, const  
AirlineClassList &) [static]`

Recursively display (dump in the underlying output log stream) the airline class objects of the BOM tree.

**Parameters:**

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.  
*const* [AirlineClassList](#)& Root of the BOM tree to be displayed.

#### 32.15.1 Detailed Description

**template<typename BOM> class stdair::BomHolder< BOM >**

Class representing the holder of BOM object containers (list and map).

Definition at line 24 of file [BomHolder.hpp](#).

#### 32.15.2 Member Typedef Documentation

**32.15.2.1 template<typename BOM> typedef stdair::BomHolderKey stdair::BomHolder< BOM >::Key\_T**

Definition allowing to retrieve the associated BOM key type.

Definition at line 34 of file [BomHolder.hpp](#).

**32.15.2.2 template<typename BOM> typedef std::list<BOM\*> stdair::BomHolder< BOM >::BomList\_T**

(STL) list of children.

Definition at line 39 of file [BomHolder.hpp](#).

**32.15.2.3 template<typename BOM> typedef std::map<const MapKey\_T, BOM\*> stdair::BomHolder< BOM >::BomMap\_T**

(STL) map of children.

Definition at line 44 of file [BomHolder.hpp](#).

### 32.15.3 Constructor & Destructor Documentation

**32.15.3.1** `template<typename BOM> stdair::BomHolder< BOM >::BomHolder ()`  
`[protected]`

Constructor.

**32.15.3.2** `template<typename BOM> stdair::BomHolder< BOM >::BomHolder (const`  
`BomHolder< BOM > &) [protected]`

Copy constructor.

**32.15.3.3** `template<typename BOM> stdair::BomHolder< BOM >::BomHolder (const Key_T &`  
`iKey) [inline, protected]`

Main constructor.

Definition at line 94 of file [BomHolder.hpp](#).

**32.15.3.4** `template<typename BOM> stdair::BomHolder< BOM >::~~BomHolder ()`  
`[inline, protected]`

Destructor.

Definition at line 99 of file [BomHolder.hpp](#).

### 32.15.4 Member Function Documentation

**32.15.4.1** `template<typename BOM> void stdair::BomHolder< BOM >::toStream (std::ostream`  
`& ioOut) const [inline, virtual]`

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 54 of file [BomHolder.hpp](#).

References [stdair::BomHolder< BOM >::toString\(\)](#).

**32.15.4.2** `template<typename BOM> void stdair::BomHolder< BOM >::fromStream`  
`(std::istream & ioIn) [inline, virtual]`

Read a Business Object from an input stream.

#### Parameters:

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 63 of file [BomHolder.hpp](#).

#### 32.15.4.3 `template<typename BOM> std::string stdair::BomHolder< BOM >::toString () const [inline, virtual]`

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 69 of file [BomHolder.hpp](#).

Referenced by [stdair::BomHolder< BOM >::toStream\(\)](#).

#### 32.15.4.4 `template<typename BOM> const std::string stdair::BomHolder< BOM >::describeKey () const [inline]`

Get a string describing the key.

Definition at line 76 of file [BomHolder.hpp](#).

### 32.15.5 Friends And Related Function Documentation

#### 32.15.5.1 `template<typename BOM> friend class FacBom [friend]`

Friend classes.

Definition at line 26 of file [BomHolder.hpp](#).

#### 32.15.5.2 `template<typename BOM> friend class FacBomManager [friend]`

Definition at line 27 of file [BomHolder.hpp](#).

### 32.15.6 Member Data Documentation

#### 32.15.6.1 `template<typename BOM> Key_T stdair::BomHolder< BOM >::_key`

Key.

Definition at line 99 of file [BomHolder.hpp](#).

#### 32.15.6.2 `template<typename BOM> BomList_T stdair::BomHolder< BOM >::_bomList`

(STL) list of children.

Definition at line 111 of file [BomHolder.hpp](#).

Referenced by [stdair::FacBomManager::cloneHolder\(\)](#), [stdair::BomManager::getList\(\)](#), [stdair::BomManager::hasList\(\)](#), [stdair::FacBomManager::resetYieldBasedNestingStructure\(\)](#), and [stdair::serialiseHelper\(\)](#).

### 32.15.6.3 template<typename BOM> BomMap\_T stdair::BomHolder< BOM >::\_bomMap

(STL) map of children.

Definition at line 116 of file [BomHolder.hpp](#).

Referenced by [stdair::FacBomManager::cloneHolder\(\)](#), [stdair::BomManager::getMap\(\)](#), [stdair::BomManager::getObjectPtr\(\)](#), [stdair::BomManager::hasMap\(\)](#), and [stdair::serialiseHelper\(\)](#).

The documentation for this class was generated from the following file:

- [stdair/bom/BomHolder.hpp](#)

## 32.16 stdair::BomHolderKey Struct Reference

`#include <stdair/bom/BomHolderKey.hpp>`Inheritance diagram for stdair::BomHolderKey::

### Public Member Functions

- [BomHolderKey \(\)](#)
- [~BomHolderKey \(\)](#)
- void [toStream](#) (std::ostream &ioOut) const
- void [fromStream](#) (std::istream &ioIn)
- const std::string [toString](#) () const
- const std::string [describe](#) () const

### 32.16.1 Detailed Description

Key of the BOM structure holder.

Definition at line 12 of file [BomHolderKey.hpp](#).

### 32.16.2 Constructor & Destructor Documentation

#### 32.16.2.1 stdair::BomHolderKey::BomHolderKey ()

Constructor.

Definition at line 13 of file [BomHolderKey.cpp](#).

#### 32.16.2.2 stdair::BomHolderKey::~BomHolderKey ()

Destructor.

Definition at line 17 of file [BomHolderKey.cpp](#).

### 32.16.3 Member Function Documentation

#### 32.16.3.1 void stdair::BomHolderKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 21 of file [BomHolderKey.cpp](#).

References [toString\(\)](#).

#### 32.16.3.2 void stdair::BomHolderKey::fromStream (std::istream & ioIn) [virtual]

Read a Business Object Key from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 26 of file [BomHolderKey.cpp](#).

#### 32.16.3.3 const std::string stdair::BomHolderKey::toString () const [virtual]

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-date.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 30 of file [BomHolderKey.cpp](#).

Referenced by [toStream\(\)](#).

#### 32.16.3.4 const std::string stdair::BomHolderKey::describe () const

Display of the key.

The documentation for this struct was generated from the following files:

- [stdair/bom/BomHolderKey.hpp](#)
- [stdair/bom/BomHolderKey.cpp](#)

## 32.17 stdair::BomID< BOM > Struct Template Reference

Class wrapper of bom ID (e.g. pointer to object).

```
#include <stdair/bom/BomID.hpp>
```

## Public Member Functions

- BOM & [getObject](#) () const
- [BomID](#) (BOM &iBOM)
- [BomID](#) (const [BomID](#) &)
- [~BomID](#) ()

### 32.17.1 Detailed Description

**template<typename BOM> struct stdair::BomID< BOM >**

Class wrapper of bom ID (e.g. pointer to object).

Definition at line 17 of file [BomID.hpp](#).

### 32.17.2 Constructor & Destructor Documentation

**32.17.2.1 template<typename BOM > stdair::BomID< BOM >::BomID (BOM & *iBOM*)**  
**[inline]**

Main constructor.

Definition at line 58 of file [BomID.hpp](#).

**32.17.2.2 template<typename BOM > stdair::BomID< BOM >::BomID (const BomID< BOM > & *iBomID*)** **[inline]**

Copy constructor.

Definition at line 61 of file [BomID.hpp](#).

**32.17.2.3 template<typename BOM > stdair::BomID< BOM >::~~BomID ()** **[inline]**

Destructor.

Definition at line 65 of file [BomID.hpp](#).

### 32.17.3 Member Function Documentation

**32.17.3.1 template<typename BOM > BOM & stdair::BomID< BOM >::getObject () const**  
**[inline]**

Retrieve the object.

Definition at line 68 of file [BomID.hpp](#).

Referenced by [stdair::CancellationStruct::describe\(\)](#), and [stdair::CancellationStruct::display\(\)](#).

The documentation for this struct was generated from the following file:

- [stdair/bom/BomID.hpp](#)

## 32.18 stdair::BomINIImport Class Reference

Utility class to import StdAir objects in a INI format.

```
#include <stdair/bom/BomINIImport.hpp>
```

### Static Public Member Functions

- static void [importINIConfig](#) ([ConfigHolderStruct](#) &, const [ConfigINIFile](#) &)

### 32.18.1 Detailed Description

Utility class to import StdAir objects in a INI format.

Definition at line 21 of file [BomINIImport.hpp](#).

### 32.18.2 Member Function Documentation

#### 32.18.2.1 void stdair::BomINIImport::importINIConfig ([ConfigHolderStruct](#) & *iConfigHolder*, const [ConfigINIFile](#) & *iConfigINIFile*) [static]

Extract a [boost](#) property tree from an INI config file.

#### Parameters:

*ConfigHolderStruct*& Holder of the configuration tree.

const [ConfigINIFile](#)& INI config file.

Definition at line 29 of file [BomINIImport.cpp](#).

References [stdair::ConfigHolderStruct::add\(\)](#), [stdair::BasFileMgr::doesExistAndIsReadable\(\)](#), [stdair::RootFilePath::name\(\)](#), and [STDAIR\\_LOG\\_DEBUG](#).

The documentation for this class was generated from the following files:

- [stdair/bom/BomINIImport.hpp](#)
- [stdair/bom/BomINIImport.cpp](#)

## 32.19 stdair::BomJSONExport Class Reference

Utility class to export StdAir objects in a JSON format.

```
#include <stdair/bom/BomJSONExport.hpp>
```

### Static Public Member Functions

- static void [jsonExportFlightDateList](#) (std::ostream &, const [BomRoot](#) &, const [AirlineCode\\_T](#) & *iAirlineCode*="all", const [FlightNumber\\_T](#) & *iFlightNumber*=0)
- static void [jsonExportFlightDateObjects](#) (std::ostream &, const [FlightDate](#) &)
- static void [jsonExportBookingRequestObject](#) (std::ostream &, const [EventStruct](#) &)
- static void [jsonExportBreakPointObject](#) (std::ostream &, const [EventStruct](#) &)

### 32.19.1 Detailed Description

Utility class to export StdAir objects in a JSON format.

Definition at line 42 of file [BomJSONExport.hpp](#).

### 32.19.2 Member Function Documentation

**32.19.2.1** `void stdair::BomJSONExport::jsonExportFlightDateList (std::ostream & oStream, const BomRoot & iBomRoot, const AirlineCode_T & iAirlineCode = "all", const FlightNumber_T & iFlightNumber = 0) [static]`

Export (dump in the underlying output log stream and in JSON format) a list of flight date objects.

#### Parameters:

*std::ostream&* Output stream in which the flight date objects should be logged/dumped.

*const BomRoot&* Root of the BOM tree containing flight-dates to be exported.

*const AirlineCode&* Airline for which the flight-dates should be displayed. If set to "all" (default), all the inventories will be displayed.

*const FlightNumber\_T&* Flight number for which all the departure dates should be displayed. If set to 0 (the default), all the flight numbers will be displayed.

Definition at line 35 of file [BomJSONExport.cpp](#).

References [stdair::Inventory::getAirlineCode\(\)](#), [stdair::FlightDate::getDepartureDate\(\)](#), and [stdair::FlightDate::getFlightNumber\(\)](#).

**32.19.2.2** `void stdair::BomJSONExport::jsonExportFlightDateObjects (std::ostream & oStream, const FlightDate & iFlightDate) [static]`

Recursively export (dump in the underlying output log stream and in JSON format) the objects of the BOM tree using the given [FlightDate](#) as root.

#### Parameters:

*std::ostream&* Output stream in which the BOM tree should be logged/dumped.

*const FlightDate&* Root of the BOM tree to be exported.

Definition at line 163 of file [BomJSONExport.cpp](#).

References [stdair::FlightDate::getAirlineCode\(\)](#), [stdair::FlightDate::getDepartureDate\(\)](#), and [stdair::FlightDate::getFlightNumber\(\)](#).

**32.19.2.3** `void stdair::BomJSONExport::jsonExportBookingRequestObject (std::ostream & oStream, const EventStruct & iEventStruct) [static]`

Export (dump in the underlying output log stream and in JSON format) the booking request object contained in the event structure.

#### Parameters:

*std::ostream&* Output stream in which the events should be logged/dumped.

**const** [EventStruct](#)& Booking request to be stored in JSON-ified format.

Definition at line 660 of file [BomJSONExport.cpp](#).

References [stdair::EventType::BKG\\_REQ](#), [stdair::BookingRequestStruct::getBookingChannel\(\)](#), [stdair::EventStruct::getBookingRequest\(\)](#), [stdair::BookingRequestStruct::getDestination\(\)](#), [stdair::EventStruct::getEventType\(\)](#), [stdair::EventType::getLabel\(\)](#), [stdair::BookingRequestStruct::getOrigin\(\)](#), [stdair::BookingRequestStruct::getPartySize\(\)](#), [stdair::BookingRequestStruct::getPOS\(\)](#), [stdair::BookingRequestStruct::getPreferedDepartureDate\(\)](#), [stdair::BookingRequestStruct::getPreferredCabin\(\)](#), [stdair::BookingRequestStruct::getPreferredDepartureTime\(\)](#), [stdair::BookingRequestStruct::getRequestDateTime\(\)](#), [stdair::BookingRequestStruct::getStayDuration\(\)](#), and [stdair::BookingRequestStruct::getWTP\(\)](#).

Referenced by [stdair::STDAIR\\_Service::jsonExportEventObject\(\)](#).

#### 32.19.2.4 void stdair::BomJSONExport::jsonExportBreakPointObject (std::ostream & oStream, const EventStruct & iEventStruct) [static]

Export (dump in the underlying output log stream and in JSON format) the break point object contained in the event structure.

##### Parameters:

**std::ostream&** Output stream in which the events should be logged/dumped.

**const** [EventStruct](#)& Break point to be stored in JSON-ified format.

Definition at line 749 of file [BomJSONExport.cpp](#).

References [stdair::EventType::BRK\\_PT](#), [stdair::EventStruct::getBreakPoint\(\)](#), [stdair::BreakPointStruct::getBreakPointTime\(\)](#), [stdair::EventStruct::getEventType\(\)](#), and [stdair::EventType::getLabel\(\)](#).

Referenced by [stdair::STDAIR\\_Service::jsonExportEventObject\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/bom/BomJSONExport.hpp](#)

## 32.20 stdair::BomJSONImport Class Reference

Utility class to import StdAir objects in a JSON format.

```
#include <stdair/bom/BomJSONImport.hpp>
```

### Static Public Member Functions

- static bool [jsonImportCommand](#) (const [JSONString](#) &, [JJsonCommand::EN\\_JJsonCommand](#) &)

- static bool [jsonImportConfig](#) (const [JSONString](#) &, [ConfigHolderStruct](#) &)

### 32.20.1 Detailed Description

Utility class to import StdAir objects in a JSON format.

Definition at line 26 of file [BomJSONImport.hpp](#).

### 32.20.2 Member Function Documentation

#### 32.20.2.1 `bool stdair::BomJSONImport::jsonImportCommand (const JSONString & iBomJSONStr, JSonCommand::EN_JSonCommand & ioEnumJSonCommand) [static]`

Extract the JSON command from a given JSON-formatted string.

##### Parameters:

`const JSONString&` JSON-formatted string.

`JSonCommand::EN_JSonCommand&` JSOM command extracted from the given string.

##### Returns:

bool State whether the extracting has been successful.

Definition at line 32 of file [BomJSONImport.cpp](#).

References [stdair::JSonCommand::getCommand\(\)](#), and [stdair::JSONString::getString\(\)](#).

#### 32.20.2.2 `bool stdair::BomJSONImport::jsonImportInventoryKey (const JSONString & iBomJSONStr, AirlineCode_T & ioAirlineCode) [static]`

Extract the airline code from a given JSON-formatted string.

##### Parameters:

`const JSONString&` JSON-formatted string.

`AirlineCode_T&` Airline code extracted from the given string.

##### Returns:

bool State whether the extracting has been successful.

Definition at line 98 of file [BomJSONImport.cpp](#).

References [stdair::JSONString::getString\(\)](#).

#### 32.20.2.3 `bool stdair::BomJSONImport::jsonImportFlightDate (const JSONString & iBomJSONStr, Date_T & ioDepartureDate) [static]`

Extract the [FlightDate](#) from a given JSON-formatted string.

##### Parameters:

`const JSONString&` JSON-formatted string.

`Date_T&` Departure date extracted from the given string.

**Returns:**

bool State whether the extracting has been successful.

Definition at line 133 of file [BomJSONImport.cpp](#).

References [stdair::JSONString::getString\(\)](#).

**32.20.2.4 bool stdair::BomJSONImport::jsonImportFlightNumber (const JSONString & iBomJSONStr, FlightNumber\_T & ioFlightNumber) [static]**

Extract the FlightNumber from a given JSON-formatted string.

**Parameters:**

*const* [JSONString](#)& JSON-formatted string.

*FlightNumber\_T*& Flight number extracted from the given string.

**Returns:**

bool State whether the extracting has been successful.

Definition at line 167 of file [BomJSONImport.cpp](#).

References [stdair::JSONString::getString\(\)](#).

**32.20.2.5 bool stdair::BomJSONImport::jsonImportBreakPoints (const JSONString & iBomJSONStr, BreakPointList\_T & oBreakPointList) [static]**

Extract the break points from a given JSON-formatted string.

**Parameters:**

*const* [JSONString](#)& JSON-formatted string.

*BreakPointList\_T*& List of breaking points extracted from the given string.

**Returns:**

bool State whether the extracting has been successful.

Definition at line 203 of file [BomJSONImport.cpp](#).

References [stdair::JSONString::getString\(\)](#).

**32.20.2.6 bool stdair::BomJSONImport::jsonImportEventType (const JSONString & iBomJSONStr, EventType::EN\_EventType & ioEventType) [static]**

Extract the event type from a given JSON-formatted string.

**Parameters:**

*const* [JSONString](#)& JSON-formatted string.

*EventType::EN\_EventType*& Event type extracted from the given string.

**Returns:**

bool State whether the extracting has been successful.

Definition at line 253 of file [BomJSONImport.cpp](#).

References [stdair::JSONString::getString\(\)](#).

### 32.20.2.7 bool stdair::BomJSONImport::jsonImportConfig (const JSONString & iBomJSONStr, ConfigHolderStruct & iConfigHolderStruct) [static]

Extract the configuration ptree from the given JSON-formatted string and add it to the configuration holder

**Parameters:**

*const* [JSONString](#)& JSON-formatted string.

*ConfigHolderStruct*& Configuration holder.

**Returns:**

bool State whether the extracting has been successful.

Definition at line 296 of file [BomJSONImport.cpp](#).

References [stdair::ConfigHolderStruct::add\(\)](#), and [stdair::JSONString::getString\(\)](#).

Referenced by [stdair::STDAIR\\_Service::jsonImportConfiguration\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/bom/BomJSONImport.cpp](#)

## 32.21 stdair::BomKeyManager Class Reference

Utility class to extract key structures from strings.

```
#include <stdair/bom/BomKeyManager.hpp>
```

**Static Public Member Functions**

- static [ParsedKey](#) [extractKeys](#) (const std::string &iFullKeyStr)
- static [InventoryKey](#) [extractInventoryKey](#) (const std::string &iFullKeyStr)
- static [FlightDateKey](#) [extractFlightDateKey](#) (const std::string &iFullKeyStr)
- static [SegmentDateKey](#) [extractSegmentDateKey](#) (const std::string &iFullKeyStr)
- static [LegDateKey](#) [extractLegDateKey](#) (const std::string &iFullKeyStr)

### 32.21.1 Detailed Description

Utility class to extract key structures from strings.

Definition at line 29 of file [BomKeyManager.hpp](#).

### 32.21.2 Member Function Documentation

#### 32.21.2.1 `ParsedKey` `stdair::BomKeyManager::extractKeys (const std::string & iFullKeyStr)` `[static]`

Build a [ParsedKey](#) structure from a full key string which includes an inventory key, flight-date key elements, segment-date key elements.

Definition at line 31 of file [BomKeyManager.cpp](#).

References [stdair::ParsedKey::\\_airlineCode](#), [stdair::ParsedKey::\\_boardingPoint](#), [stdair::ParsedKey::\\_boardingTime](#), [stdair::ParsedKey::\\_departureDate](#), [stdair::ParsedKey::\\_flightNumber](#), [stdair::ParsedKey::\\_fullKey](#), [stdair::ParsedKey::\\_offPoint](#), and [stdair::DEFAULT\\_KEY\\_TOKEN\\_DELIMITER](#).

Referenced by [stdair::TravelSolutionStruct::describe\(\)](#), [stdair::TravelSolutionStruct::describeSegmentPath\(\)](#), [stdair::TravelSolutionStruct::display\(\)](#), [extractFlightDateKey\(\)](#), [extractInventoryKey\(\)](#), [extractLegDateKey\(\)](#), [extractSegmentDateKey\(\)](#), and [stdair::BomRetriever::retrieveSegmentDateFromLongKey\(\)](#).

#### 32.21.2.2 `InventoryKey` `stdair::BomKeyManager::extractInventoryKey (const std::string & iFullKeyStr)` `[static]`

Build a [InventoryKey](#) structure from a (full) key string.

The full key string gathers airline code, flight number, origin and destination, cabin and booking class. It corresponds to the output generated by the `toString()` methods of the `XxxKey` structures.

##### Parameters:

**const** std::string& The full key string.

##### Returns:

[InventoryKey](#) The just built [InventoryKey](#) structure.

Definition at line 79 of file [BomKeyManager.cpp](#).

References [extractKeys\(\)](#), and [stdair::ParsedKey::getInventoryKey\(\)](#).

Referenced by [stdair::BomRetriever::retrieveInventoryFromLongKey\(\)](#), and [stdair::BomRetriever::retrievePartnerSegmentDateFromLongKey\(\)](#).

#### 32.21.2.3 `FlightDateKey` `stdair::BomKeyManager::extractFlightDateKey (const std::string & iFullKeyStr)` `[static]`

Build a [FlightDateKey](#) structure from a (full) key string.

The full key string gathers airline code, flight number, origin and destination, cabin and booking class. It corresponds to the output generated by the `toString()` methods of the `XxxKey` structures.

##### Parameters:

**const** std::string& The full key string.

##### Returns:

[FlightDateKey](#) The just built [FlightDateKey](#) structure.

Definition at line 87 of file [BomKeyManager.cpp](#).

References [extractKeys\(\)](#), and [stdair::ParsedKey::getFlightDateKey\(\)](#).

Referenced by [stdair::OnDDateKey::getDate\(\)](#), and [stdair::BomRetriever::retrieveFlightDateFromLongKey\(\)](#).

#### 32.21.2.4 SegmentDateKey stdair::BomKeyManager::extractSegmentDateKey (const std::string & iFullKeyStr) [static]

Build a [SegmentDateKey](#) structure from a (full) key string.

The full key string gathers airline code, flight number, origin and destination, cabin and booking class. It corresponds to the output generated by the toString() methods of the XxxKey structures.

##### Parameters:

**const** std::string& The full key string.

##### Returns:

[SegmentDateKey](#) The just built [SegmentDateKey](#) structure.

Definition at line 95 of file [BomKeyManager.cpp](#).

References [extractKeys\(\)](#), and [stdair::ParsedKey::getSegmentKey\(\)](#).

Referenced by [stdair::OnDDateKey::getDestination\(\)](#), [stdair::OnDDateKey::getOrigin\(\)](#), and [stdair::BomRetriever::retrieveSegmentDateFromLongKey\(\)](#).

#### 32.21.2.5 LegDateKey stdair::BomKeyManager::extractLegDateKey (const std::string & iFullKeyStr) [static]

Build a [LegDateKey](#) structure from a (full) key string.

The full key string gathers airline code, flight number, origin and destination, cabin and booking class. It corresponds to the output generated by the toString() methods of the XxxKey structures.

##### Parameters:

**const** std::string& The full key string.

##### Returns:

[LegDateKey](#) The just built [LegDateKey](#) structure.

Definition at line 103 of file [BomKeyManager.cpp](#).

References [extractKeys\(\)](#), and [stdair::ParsedKey::getLegKey\(\)](#).

Referenced by [stdair::BomRetriever::retrieveOperatingLegDateFromLongKey\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/bom/BomKeyManager.hpp](#)
- [stdair/bom/BomKeyManager.cpp](#)

## 32.22 stdair::BomManager Class Reference

Utility class for StdAir-based objects.

```
#include <stdair/bom/BomManager.hpp>
```

### Public Member Functions

- class [FacBomManager](#)

#### 32.22.1 Detailed Description

Utility class for StdAir-based objects. Most of those methods work for objects specified and instantiated outside StdAir, as long as those objects inherit from StdAir objects.

Definition at line 34 of file [BomManager.hpp](#).

### 32.22.2 Member Function Documentation

**32.22.2.1** `template<typename OBJECT2 , typename OBJECT1 > const BomHolder< OBJECT2 >::BomList_T & stdair::BomManager::getList (const OBJECT1 & iObject1)`  
`[inline, static]`

Get the container (STL list) of OBJECT2 objects within the OBJECT1 object.

Definition at line 140 of file [BomManager.hpp](#).

References [stdair::BomHolder< BOM >::\\_bomList](#).

**32.22.2.2** `template<typename OBJECT2 , typename OBJECT1 > const BomHolder< OBJECT2 >::BomMap_T & stdair::BomManager::getMap (const OBJECT1 & iObject1)`  
`[inline, static]`

Get the container (STL map) of OBJECT2 objects within the OBJECT1 object.

Definition at line 159 of file [BomManager.hpp](#).

References [stdair::BomHolder< BOM >::\\_bomMap](#).

**32.22.2.3** `template<typename OBJECT2 , typename OBJECT1 > bool`  
`stdair::BomManager::hasList (const OBJECT1 & iObject1) [inline, static]`

Check if the list of object2 has been initialised.

Definition at line 181 of file [BomManager.hpp](#).

References [stdair::BomHolder< BOM >::\\_bomList](#).

**32.22.2.4** `template<typename OBJECT2 , typename OBJECT1 > bool`  
`stdair::BomManager::hasMap (const OBJECT1 & iObject1) [inline, static]`

Check if the map of object2 has been initialised.

Definition at line 201 of file [BomManager.hpp](#).

References [stdair::BomHolder< BOM >::\\_bomMap](#).

**32.22.2.5** `template<typename PARENT , typename CHILD > PARENT *`  
`stdair::BomManager::getParentPtr (const CHILD & iChild) [inline, static]`

Get the PARENT of the given CHILD.

If the types do not match, NULL is returned.

Definition at line 220 of file [BomManager.hpp](#).

**32.22.2.6** `template<typename PARENT , typename CHILD > PARENT &`  
`stdair::BomManager::getParent (const CHILD & iChild) [inline, static]`

Get the PARENT of the given CHILD.

Definition at line 230 of file [BomManager.hpp](#).

**32.22.2.7** `template<typename OBJECT2 , typename OBJECT1 > OBJECT2 *  
stdair::BomManager::getObjectPtr (const OBJECT1 & iObject1, const MapKey_T & iKey) [inline, static]`

Get the OBJECT2 pointer corresponding to the given string key.

If such a OBJECT2 does not exist, return NULL.

Definition at line 241 of file [BomManager.hpp](#).

References [stdair::BomHolder< BOM >::\\_bomMap](#).

**32.22.2.8** `template<typename OBJECT2 , typename OBJECT1 > OBJECT2 &  
stdair::BomManager::getObject (const OBJECT1 & iObject1, const MapKey_T & iKey)  
[inline, static]`

Get the OBJECT2 corresponding to the given string key.

Definition at line 283 of file [BomManager.hpp](#).

References [STDAIR\\_LOG\\_ERROR](#).

**32.22.2.9** `template<> bool stdair::BomManager::hasList (const SegmentDate & ioSegmentDate)  
[inline]`

**32.22.2.10** `template<> const BomHolder<SegmentDate>::BomList_T&  
stdair::BomManager::getList (const SegmentDate & ioSegmentDate) [inline]`

**32.22.2.11** `template<> bool stdair::BomManager::hasMap (const SegmentDate &  
ioSegmentDate) [inline]`

**32.22.2.12** `template<> bool stdair::BomManager::hasList (const Inventory & ioInventory)  
[inline]`

**32.22.2.13** `template<> bool stdair::BomManager::hasMap (const Inventory & ioInventory)  
[inline]`

**32.22.2.14** `template<> AirlineFeature* stdair::BomManager::getObjectPtr (const Inventory &  
iInventory, const MapKey_T & iKey) [inline]`

**32.22.2.15** `template<> AirlineFeature& stdair::BomManager::getObject (const Inventory & iInventory, const MapKey_T & iKey) [inline]`

### 32.22.3 Friends And Related Function Documentation

### 32.23.1 Detailed Description

Utility class to retrieve StdAir objects.

Definition at line 36 of file [BomRetriever.hpp](#).

### 32.23.2 Member Function Documentation

#### 32.23.2.1 [Inventory](#) \* stdair::BomRetriever::retrieveInventoryFromLongKey (const BomRoot & iBomRoot, const std::string & iFullKeyStr) [static]

Retrieve an [Inventory](#) object from a (full) key string.

The full key string gathers airline code, flight number, origin and destination, cabin and booking class. It corresponds to the output generated by the toString() methods of the XxxKey structures.

#### Parameters:

**const** [BomRoot](#)& The root of the BOM tree.

**const** std::string& The full key string.

#### Returns:

[Inventory](#)\* The just retrieved [Inventory](#) object.

Definition at line 31 of file [BomRetriever.cpp](#).

References [stdair::BomKeyManager::extractInventoryKey\(\)](#), and [stdair::BomRoot::getInventory\(\)](#).

Referenced by [retrieveFlightDateFromLongKey\(\)](#), and [retrievePartnerSegmentDateFromLongKey\(\)](#).

#### 32.23.2.2 [Inventory](#) \* stdair::BomRetriever::retrieveInventoryFromLongKey (const Inventory & iInventory, const std::string & iFullKeyStr) [static]

Retrieve an [Inventory](#) object from a (full) key string.

The full key string gathers airline code, flight number, origin and destination, cabin and booking class. It corresponds to the output generated by the toString() methods of the XxxKey structures.

**Parameters:**

**const** [Inventory](#)& The root of the BOM tree.

**const** std::string& The full key string.

**Returns:**

[Inventory](#)\* The just retrieved [Inventory](#) object.

Definition at line 46 of file [BomRetriever.cpp](#).

References [stdair::BomKeyManager::extractInventoryKey\(\)](#), and [stdair::InventoryKey::getAirlineCode\(\)](#).

### 32.23.2.3 [Inventory](#) \* stdair::BomRetriever::retrieveInventoryFromKey (const [BomRoot](#) & *iBomRoot*, const [InventoryKey](#) & *iKey*) [static]

Retrieve an [Inventory](#) object from an [InventoryKey](#) structure.

**Parameters:**

**const** [BomRoot](#)& The root of the BOM tree.

**const** [InventoryKey](#)& The key.

**Returns:**

[Inventory](#)\* The just retrieved [Inventory](#) object.

Definition at line 63 of file [BomRetriever.cpp](#).

References [stdair::BomRoot::getInventory\(\)](#).

Referenced by [retrieveAirlineFeatureFromKey\(\)](#), [retrieveDummyLegCabin\(\)](#), [retrieveDummySegmentCabin\(\)](#), and [retrieveFlightDateFromKeySet\(\)](#).

### 32.23.2.4 [Inventory](#) \* stdair::BomRetriever::retrieveInventoryFromKey (const [BomRoot](#) & *iBomRoot*, const [AirlineCode\\_T](#) & *iAirlineCode*) [static]

Retrieve an [Inventory](#) object from an [InventoryKey](#) structure.

**Parameters:**

**const** [BomRoot](#)& The root of the BOM tree.

**const** [AirlineCode\\_T](#)& The key.

**Returns:**

[Inventory](#)\* The just retrieved [Inventory](#) object.

Definition at line 75 of file [BomRetriever.cpp](#).

References [stdair::BomRoot::getInventory\(\)](#).

### 32.23.2.5 `AirlineFeature * stdair::BomRetriever::retrieveAirlineFeatureFromKey (const BomRoot & iBomRoot, const AirlineCode_T & iAirlineCode) [static]`

Retrieve an Airline Feature object from an airline code.

#### Parameters:

- `const BomRoot&` The root of the BOM tree.
- `const AirlineCode_T&` The key.

#### Returns:

`AirlineFeature*` The just retrieved Airline Feature object.

Definition at line 88 of file [BomRetriever.cpp](#).

References [retrieveInventoryFromKey\(\)](#).

Referenced by [stdair::ConfigHolderStruct::updateAirlineFeatures\(\)](#).

### 32.23.2.6 `FlightDate * stdair::BomRetriever::retrieveFlightDateFromLongKey (const BomRoot & iBomRoot, const std::string & iFullKeyStr) [static]`

Retrieve a [FlightDate](#) object from a (full) key string.

The full key string gathers airline code, flight number, origin and destination, cabin and booking class. It corresponds to the output generated by the `toString()` methods of the `XxxKey` structures.

#### Parameters:

- `const BomRoot&` The root of the BOM tree.
- `const std::string&` The full key string.

#### Returns:

`FlightDate*` The just retrieved [FlightDate](#) object.

Definition at line 109 of file [BomRetriever.cpp](#).

References [stdair::BomKeyManager::extractFlightDateKey\(\)](#), [stdair::Inventory::getFlightDate\(\)](#), and [retrieveInventoryFromLongKey\(\)](#).

Referenced by [retrieveSegmentDateFromLongKey\(\)](#).

### 32.23.2.7 `FlightDate * stdair::BomRetriever::retrieveFlightDateFromKeySet (const BomRoot & iBomRoot, const AirlineCode_T & iAirlineCode, const FlightNumber_T & iFlightNumber, const Date_T & iFlightDateDate) [static]`

Retrieve a [FlightDate](#) object from a set of keys.

#### Parameters:

- `const BomRoot&` The root of the BOM tree.
- `const AirlineCode_T&` The key.
- `const FlightNumber_T&` Part of the key.

*const* Date\_T& Part of the key.

#### Returns:

FlightDate\* The just retrieved [FlightDate](#) object.

Definition at line 132 of file [BomRetriever.cpp](#).

References [retrieveFlightDateFromKey\(\)](#), and [retrieveInventoryFromKey\(\)](#).

Referenced by [stdair::STDAIR\\_Service::check\(\)](#), [stdair::STDAIR\\_Service::csvDisplay\(\)](#), and [stdair::STDAIR\\_Service::jsonExportFlightDateObjects\(\)](#).

#### 32.23.2.8 FlightDate \* stdair::BomRetriever::retrieveFlightDateFromLongKey (const Inventory & iInventory, const std::string & iFullKeyStr) [static]

Retrieve a [FlightDate](#) object from a (full) key string.

The full key string gathers airline code, flight number, origin and destination, cabin and booking class. It corresponds to the output generated by the toString() methods of the XxxKey structures.

#### Parameters:

*const* [Inventory](#)& The root of the BOM tree.

*const* std::string& The full key string.

#### Returns:

FlightDate\* The just retrieved [FlightDate](#) object.

Definition at line 155 of file [BomRetriever.cpp](#).

References [stdair::BomKeyManager::extractFlightDateKey\(\)](#), and [stdair::Inventory::getFlightDate\(\)](#).

#### 32.23.2.9 FlightDate \* stdair::BomRetriever::retrieveFlightDateFromKey (const Inventory & iInventory, const FlightDateKey & iKey) [static]

Retrieve a [FlightDate](#) object from an [FlightDateKey](#) structure.

#### Parameters:

*const* [Inventory](#)& The root of the BOM tree.

*const* [FlightDateKey](#)& The key.

#### Returns:

FlightDate\* The just retrieved [FlightDate](#) object.

Definition at line 170 of file [BomRetriever.cpp](#).

References [stdair::Inventory::getFlightDate\(\)](#).

Referenced by [retrieveDummyLegCabin\(\)](#), [retrieveDummySegmentCabin\(\)](#), [retrieveFlightDateFromKey-Set\(\)](#), and [retrieveSegmentDateFromLongKey\(\)](#).

### 32.23.2.10 `FlightDate * stdair::BomRetriever::retrieveFlightDateFromKey (const Inventory & iInventory, const FlightNumber_T & iFlightNumber, const Date_T & iFlightDateDate) [static]`

Retrieve a [FlightDate](#) object from an [FlightDateKey](#) structure.

#### Parameters:

`const` [Inventory](#)& The root of the BOM tree.

`const` `FlightNumber_T`& Part of the key.

`const` `Date_T`& Part of the key.

#### Returns:

`FlightDate*` The just retrieved [FlightDate](#) object.

Definition at line 182 of file [BomRetriever.cpp](#).

References [stdair::Inventory::getFlightDate\(\)](#).

### 32.23.2.11 `LegDate * stdair::BomRetriever::retrieveOperatingLegDateFromLongKey (const FlightDate & iFlightDate, const std::string & iFullKeyStr) [static]`

Retrieve a [LegDate](#) object from an [FlightDate](#) structure.

The full key string gathers airline code, flight number, origin and destination, cabin and booking class. It corresponds to the output generated by the `toString()` methods of the `XxxKey` structures.

#### Parameters:

`const` [FlightDate](#)& The root of the BOM tree.

`const` `std::string`& The full key string.

#### Returns:

`LegDate*` The just retrieved [LegDate](#) object.

Definition at line 266 of file [BomRetriever.cpp](#).

References [stdair::BomKeyManager::extractLegDateKey\(\)](#), and [stdair::FlightDate::getLegDate\(\)](#).

### 32.23.2.12 `SegmentDate * stdair::BomRetriever::retrievePartnerSegmentDateFromLongKey (const Inventory & iInventory, const std::string & iFullKeyStr) [static]`

Retrieve a partner [SegmentDate](#) object from an [Inventory](#) structure.

The full key string gathers airline code, flight number, origin and destination, cabin and booking class. It corresponds to the output generated by the `toString()` methods of the `XxxKey` structures.

#### Parameters:

`const` [Inventory](#)& The root of the BOM tree.

`const` `std::string`& The full key string.

**Returns:**

SegmentDate\* The just retrieved [SegmentDate](#) object.

Definition at line 281 of file [BomRetriever.cpp](#).

References [stdair::BomKeyManager::extractInventoryKey\(\)](#), [stdair::InventoryKey::getAirlineCode\(\)](#), [retrieveInventoryFromLongKey\(\)](#), and [retrieveSegmentDateFromLongKey\(\)](#).

### 32.23.2.13 SegmentDate \* stdair::BomRetriever::retrieveSegmentDateFromLongKey (const BomRoot & iBomRoot, const std::string & iFullKeyStr) [static]

Retrieve a [SegmentDate](#) object from a (full) key string.

The full key string gathers airline code, segment number, origin and destination, cabin and booking class. It corresponds to the output generated by the toString() methods of the XxxKey structures.

**Parameters:**

*const* [BomRoot](#)& The root of the BOM tree.

*const* std::string& The full key string.

**Returns:**

SegmentDate\* The just retrieved [SegmentDate](#) object.

Definition at line 196 of file [BomRetriever.cpp](#).

References [stdair::BomKeyManager::extractSegmentDateKey\(\)](#), [stdair::FlightDate::getSegmentDate\(\)](#), and [retrieveFlightDateFromLongKey\(\)](#).

Referenced by [retrieveBookingClassFromLongKey\(\)](#), and [retrievePartnerSegmentDateFromLongKey\(\)](#).

### 32.23.2.14 SegmentDate \* stdair::BomRetriever::retrieveSegmentDateFromLongKey (const Inventory & iInventory, const std::string & iFullKeyStr) [static]

Retrieve a [SegmentDate](#) object from a (full) key string.

The full key string gathers airline code, segment number, origin and destination, cabin and booking class. It corresponds to the output generated by the toString() methods of the XxxKey structures.

**Parameters:**

*const* [Inventory](#)& The root of the BOM tree.

*const* std::string& The full key string.

**Returns:**

SegmentDate\* The just retrieved [SegmentDate](#) object.

Definition at line 219 of file [BomRetriever.cpp](#).

References [stdair::ParsedKey::\\_airlineCode](#), [stdair::BomKeyManager::extractKeys\(\)](#), [stdair::Inventory::getAirlineCode\(\)](#), [stdair::ParsedKey::getFlightDateKey\(\)](#), [stdair::ParsedKey::getSegmentKey\(\)](#), [retrieveFlightDateFromKey\(\)](#), [retrieveSegmentDateFromKey\(\)](#), [STDAIR\\_LOG\\_DEBUG](#), [stdair::SegmentDateKey::toString\(\)](#), and [stdair::FlightDateKey::toString\(\)](#).

**32.23.2.15** `SegmentDate * stdair::BomRetriever::retrieveSegmentDateFromLongKey (const FlightDate & iFlightDate, const std::string & iFullKeyStr) [static]`

Retrieve a [SegmentDate](#) object from a (full) key string.

The full key string gathers airline code, segment number, origin and destination, cabin and booking class. It corresponds to the output generated by the toString() methods of the XxxKey structures.

**Parameters:**

*const* [FlightDate](#)& The root of the BOM tree.

*const* std::string& The full key string.

**Returns:**

SegmentDate\* The just retrieved [SegmentDate](#) object.

Definition at line 251 of file [BomRetriever.cpp](#).

References [stdair::BomKeyManager::extractSegmentDateKey\(\)](#), and [stdair::FlightDate::getSegmentDate\(\)](#).

**32.23.2.16** `SegmentDate * stdair::BomRetriever::retrieveSegmentDateFromKey (const FlightDate & iFlightDate, const SegmentDateKey & iKey) [static]`

Retrieve a [SegmentDate](#) object from an [SegmentDateKey](#) structure.

**Parameters:**

*const* [FlightDate](#)& The root of the BOM tree.

*const* [SegmentDateKey](#)& The key.

**Returns:**

SegmentDate\* The just retrieved [SegmentDate](#) object.

Definition at line 307 of file [BomRetriever.cpp](#).

References [stdair::FlightDate::getSegmentDate\(\)](#).

Referenced by [retrieveSegmentDateFromLongKey\(\)](#).

**32.23.2.17** `SegmentDate * stdair::BomRetriever::retrieveSegmentDateFromKey (const FlightDate & iFlightDate, const AirportCode_T & iOrigin, const AirportCode_T & iDestination) [static]`

Retrieve a [SegmentDate](#) object from an [SegmentDateKey](#) structure.

**Parameters:**

*const* [FlightDate](#)& The root of the BOM tree.

*const* AirportCode\_T& Origin, part of the key.

*const* AirportCode\_T& Destination, part of the key.

**Returns:**

SegmentDate\* The just retrieved [SegmentDate](#) object.

Definition at line 319 of file [BomRetriever.cpp](#).

References [stdair::FlightDate::getSegmentDate\(\)](#).

### 32.23.2.18 BookingClass \* stdair::BomRetriever::retrieveBookingClassFromLongKey (const Inventory & iInventory, const std::string & iFullKeyStr, const ClassCode\_T & iClassCode) [static]

Retrieve a [BookingClass](#) object from a (full) key string.

The full key string gathers airline code, segment number, origin and destination, cabin and booking class. It corresponds to the output generated by the toString() methods of the XxxKey structures.

Besides being attached to segment-cabin objects (and fare family objects, when they exist), the booking-class objects must also be attached directly to the segment-date.

Hence, if an assertion fails within that method call, chances are that the booking-class objects have not been attached to the segment-date objects. Check, for instance, the CmdBomManager::buildSampleBom() to see how that should be properly done.

#### Parameters:

**const** [Inventory](#)& The root of the BOM tree.

**const** std::string& Part of the full key string.

**const** ClassCode\_T& Part of the full key string.

#### Returns:

BookingClass\* The just retrieved [BookingClass](#) object.

Definition at line 333 of file [BomRetriever.cpp](#).

References [retrieveSegmentDateFromLongKey\(\)](#).

### 32.23.2.19 AirportPair \* stdair::BomRetriever::retrieveAirportPairFromKeySet (const BomRoot & iBomRoot, const stdair::AirportCode\_T & iOrigin, const stdair::AirportCode\_T & iDestination) [static]

Retrieve an [AirportPair](#) object from an [AirportPair](#) structure.

#### Parameters:

**const** [BomRoot](#)& The root of the BOM tree.

**const** AirportCode\_T& Origin, part of the key.

**const** AirportCode\_T& Destination, part of the key.

#### Returns:

AirportPair\* The just retrieved [AirportPair](#) object.

Definition at line 355 of file [BomRetriever.cpp](#).

References [stdair::AirportPairKey::toString\(\)](#).

Referenced by [retrieveDatePeriodListFromKeySet\(\)](#).

**32.23.2.20** void stdair::BomRetriever::retrieveDatePeriodListFromKey (const AirportPair & iAirportPair, const stdair::Date\_T & iDepartureDate, stdair::DatePeriodList\_T & ioDatePeriodList) [static]

Retrieve a list of date-period corresponding to a flight date.

**Parameters:**

*const* AirportPair& The root of the BOM tree.  
*const* Date\_T& Departure Date of the flight  
*stdair::DatePeriodList\_T&* List of DatePeriod to display.

Definition at line 373 of file BomRetriever.cpp.

References stdair::DatePeriod::isDepartureDateValid().

Referenced by retrieveDatePeriodListFromKeySet().

**32.23.2.21** void stdair::BomRetriever::retrieveDatePeriodListFromKeySet (const BomRoot & iBomRoot, const stdair::AirportCode\_T & iOrigin, const stdair::AirportCode\_T & iDestination, const stdair::Date\_T & iDepartureDate, stdair::DatePeriodList\_T & ioDatePeriodList) [static]

Retrieve a list of date-period from a set of keys.

**Parameters:**

*const* BomRoot& The root of the BOM tree.  
*const* AirportCode\_T& Part of the AirportPair key: the origin airport  
*const* AirportCode\_T& Part of the AirportPair key: the destination airport.  
*const* Date\_T& Departure date of the flight  
*stdair::DatePeriodList\_T&* List of DatePeriod to display.

Definition at line 404 of file BomRetriever.cpp.

References retrieveAirportPairFromKeySet(), and retrieveDatePeriodListFromKey().

Referenced by stdair::STDAIR\_Service::check(), and stdair::STDAIR\_Service::csvDisplay().

**32.23.2.22** LegCabin & stdair::BomRetriever::retrieveDummyLegCabin (stdair::BomRoot & iBomRoot, const bool isForFareFamilies = false) [static]

Retrieve one sample leg-cabin of the dummy inventory of "XX".

**Parameters:**

*stdair::BomRoot&* The BOM tree.  
*const* bool Boolean to choose the sample leg-cabin. True: the dummy leg-cabin with fare families. False: the dummy leg-cabin without fare families. By default the value is false.

Definition at line 427 of file BomRetriever.cpp.

References stdair::DEFAULT\_AIRLINE\_CODE, stdair::DEFAULT\_CABIN\_CODE, stdair::DEFAULT\_DEPARTURE\_DATE, stdair::DEFAULT\_FLIGHT\_NUMBER, stdair::DEFAULT\_FLIGHT\_NUMBER\_FF, stdair::DEFAULT\_ORIGIN, stdair::LegDate::getLegCabin(), stdair::FlightDate::getLegDate(), retrieveFlightDateFromKey(), and retrieveInventoryFromKey().

### 32.23.2.23 SegmentCabin & stdair::BomRetriever::retrieveDummySegmentCabin (stdair::BomRoot & iBomRoot, const bool isForFareFamilies = false) [static]

Retrieve one sample segment-cabin of the dummy inventory of "XX".

#### Parameters:

*stdair::BomRoot&* The BOM tree.

*const* bool Boolean to choose the sample segment-cabin. True: the dummy segment-cabin with fare families. False: the dummy segment-cabin without fare families. By default the value is false.

Definition at line 502 of file [BomRetriever.cpp](#).

References [stdair::DEFAULT\\_AIRLINE\\_CODE](#), [stdair::DEFAULT\\_CABIN\\_CODE](#), [stdair::DEFAULT\\_DEPARTURE\\_DATE](#), [stdair::DEFAULT\\_DESTINATION](#), [stdair::DEFAULT\\_FLIGHT\\_NUMBER](#), [stdair::DEFAULT\\_FLIGHT\\_NUMBER\\_FF](#), [stdair::DEFAULT\\_ORIGIN](#), [stdair::FlightDate::getSegmentDate\(\)](#), [retrieveFlightDateFromKey\(\)](#), [retrieveInventoryFromKey\(\)](#), and [stdair::SegmentCabinKey::toString\(\)](#).

### 32.23.2.24 std::string stdair::BomRetriever::retrieveFullKeyFromSegmentDate (const SegmentDate & iSegmentdate) [static]

Retrieve the whole key of the segment date, that is to say a string composed of the inventory key, the flight date key and the segment date key.

#### Parameters:

*const* [SegmentDate](#)& Segment date to retrieve the whole key for.

#### Returns:

std::string The just retrieved whole key.

Definition at line 578 of file [BomRetriever.cpp](#).

References [stdair::DEFAULT\\_KEY\\_SUB\\_FLD\\_DELIMITER](#), [stdair::SegmentDate::describeKey\(\)](#), and [stdair::Inventory::describeKey\(\)](#).

### 32.24.1 Detailed Description

Class representing the actual attributes for the Bom root.

Definition at line 32 of file [BomRoot.hpp](#).

### 32.24.2 Member Typedef Documentation

#### 32.24.2.1 typedef BomRootKey stdair::BomRoot::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 42 of file [BomRoot.hpp](#).

### 32.24.3 Constructor & Destructor Documentation

#### 32.24.3.1 stdair::BomRoot::BomRoot () [protected]

Default constructor.

Definition at line 17 of file [BomRoot.cpp](#).

#### 32.24.3.2 stdair::BomRoot::BomRoot (const BomRoot & iBomRoot) [protected]

Copy constructor.

Definition at line 22 of file [BomRoot.cpp](#).

#### 32.24.3.3 stdair::BomRoot::BomRoot (const Key\_T & iKey) [protected]

Main constructor.

Definition at line 28 of file [BomRoot.cpp](#).

#### 32.24.3.4 stdair::BomRoot::~~BomRoot () [protected]

Destructor.

Definition at line 32 of file [BomRoot.cpp](#).

### 32.24.4 Member Function Documentation

#### 32.24.4.1 const Key\_T& stdair::BomRoot::getKey () const [inline]

Get the inventory key (airline code).

Definition at line 48 of file [BomRoot.hpp](#).

References [\\_key](#).

#### 32.24.4.2 const HolderMap\_T& stdair::BomRoot::getHolderMap () const [inline]

Get the map of children.

Definition at line 53 of file [BomRoot.hpp](#).

References [\\_holderMap](#).

**32.24.4.3** `const FRAT5Curve_T& stdair::BomRoot::getFRAT5Curve (const std::string & iKey)  
const [inline]`

Get the FRAT5 curve corresponding to the given key.

Definition at line 58 of file [BomRoot.hpp](#).

References [\\_frat5CurveHolder](#), and [stdair::FRAT5CurveHolderStruct::getFRAT5Curve\(\)](#).

**32.24.4.4** `const FFDisutilityCurve_T& stdair::BomRoot::getFFDisutilityCurve (const std::string  
& iKey) const [inline]`

Get the FFDisutility curve corresponding to the given key.

Definition at line 63 of file [BomRoot.hpp](#).

References [\\_ffDisutilityCurveHolder](#), and [stdair::FFDisutilityCurveHolderStruct::getFFDisutilityCurve\(\)](#).

**32.24.4.5** `Inventory * stdair::BomRoot::getInventory (const std::string & iInventoryKeyStr) const`

Get a pointer on the [Inventory](#) object corresponding to the given key.

**Note:**

The [Inventory](#) object can be inherited from, if needed. In that case, a `dynamic_cast<>` may be needed.

**Parameters:**

*const* std::string& The flight-date key.

**Returns:**

Inventory\* Found [Inventory](#) object. NULL if not found.

Definition at line 43 of file [BomRoot.cpp](#).

Referenced by [getInventory\(\)](#), [stdair::BomRetriever::retrieveInventoryFromKey\(\)](#), and [stdair::BomRetriever::retrieveInventoryFromLongKey\(\)](#).

**32.24.4.6** `Inventory * stdair::BomRoot::getInventory (const InventoryKey & iInventoryKey) const`

Get a pointer on the [Inventory](#) object corresponding to the given key.

**Note:**

The [Inventory](#) object can be inherited from, if needed. In that case, a `dynamic_cast<>` may be needed.

**Parameters:**

*const* [InventoryKey](#)& The flight-date key

**Returns:**

Inventory\* Found [Inventory](#) object. NULL if not found.

Definition at line 50 of file [BomRoot.cpp](#).

References [getInventory\(\)](#), and [stdair::InventoryKey::toString\(\)](#).

**32.24.4.7** void stdair::BomRoot::addFRAT5Curve (const std::string & *iKey*, const FRAT5Curve\_T & *iCurve*) [inline]

Add a new FRAT5 curve to the holder.

Definition at line 93 of file [BomRoot.hpp](#).

References [\\_frat5CurveHolder](#), and [stdair::FRAT5CurveHolderStruct::addCurve\(\)](#).

**32.24.4.8** void stdair::BomRoot::addFFDisutilityCurve (const std::string & *iKey*, const FFDisutilityCurve\_T & *iCurve*) [inline]

Add a new FF disutility curve to the holder.

Definition at line 98 of file [BomRoot.hpp](#).

References [\\_ffDisutilityCurveHolder](#), and [stdair::FFDisutilityCurveHolderStruct::addCurve\(\)](#).

**32.24.4.9** void stdair::BomRoot::toStream (std::ostream & *ioOut*) const [inline, virtual]

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 111 of file [BomRoot.hpp](#).

References [toString\(\)](#).

**32.24.4.10** void stdair::BomRoot::fromStream (std::istream & *ioIn*) [inline, virtual]

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 120 of file [BomRoot.hpp](#).

**32.24.4.11** std::string stdair::BomRoot::toString () const [virtual]

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 36 of file [BomRoot.cpp](#).

References [\\_key](#), and [stdair::BomRootKey::toString\(\)](#).

Referenced by [toStream\(\)](#).

**32.24.4.12 const std::string stdair::BomRoot::describeKey () const [inline]**

Get a string describing the key.

Definition at line 131 of file [BomRoot.hpp](#).

References [\\_key](#), and [stdair::BomRootKey::toString\(\)](#).

**32.24.4.13 template<class Archive > void stdair::BomRoot::serialize (Archive & ar, const unsigned int iFileVersion) [inline]**

Serialisation.

That method is used both for serialisation a BOM tree (into a backup file/stream), as well as re-instantiating a BOM tree from a back-up file/stream.

**Note:**

The implementation of that method is to be found in the [CmdBomSerialiser](#) command.

Definition at line 133 of file [CmdBomSerialiser.cpp](#).

References [\\_key](#).

**32.24.5 Friends And Related Function Documentation****32.24.5.1 friend class FacBom [friend]**

Definition at line 33 of file [BomRoot.hpp](#).

**32.24.5.2 friend class FacCloneBom [friend]**

Definition at line 34 of file [BomRoot.hpp](#).

### 32.25.1 Detailed Description

Key of the BOM structure root.

Definition at line 25 of file [BomRootKey.hpp](#).

### 32.25.2 Constructor & Destructor Documentation

#### 32.25.2.1 stdair::BomRootKey::BomRootKey ()

Default constructor.

Definition at line 18 of file [BomRootKey.cpp](#).

#### 32.25.2.2 stdair::BomRootKey::BomRootKey (const std::string & *iIdentification*)

Constructor.

Definition at line 28 of file [BomRootKey.cpp](#).

#### 32.25.2.3 stdair::BomRootKey::BomRootKey (const BomRootKey & *iBomRootKey*)

Copy constructor.

Definition at line 23 of file [BomRootKey.cpp](#).

#### 32.25.2.4 stdair::BomRootKey::~~BomRootKey ()

Destructor.

Definition at line 33 of file [BomRootKey.cpp](#).

### 32.25.3 Member Function Documentation

#### 32.25.3.1 const std::string& stdair::BomRootKey::getID () const `[inline]`

Get the identification.

Definition at line 56 of file [BomRootKey.hpp](#).

**32.25.3.2 void stdair::BomRootKey::toStream (std::ostream & *ioOut*) const [virtual]**

Dump a Business Object Key into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 37 of file [BomRootKey.cpp](#).

References [toString\(\)](#).

**32.25.3.3 void stdair::BomRootKey::fromStream (std::istream & *ioIn*) [virtual]**

Read a Business Object Key from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 42 of file [BomRootKey.cpp](#).

**32.25.3.4 const std::string stdair::BomRootKey::toString () const [virtual]**

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-date.

Reimplemented from [stdair::KeyAbstract](#).

## Friends

- class [FacBom](#)
- class [FacCloneBom](#)
- class [FacBomManager](#)

### 32.27.1 Detailed Description

Class representing the actual attributes for an airline booking class.

Definition at line 24 of file [BookingClass.hpp](#).

### 32.27.2 Member Typedef Documentation

#### 32.27.2.1 typedef BookingClassKey stdair::BookingClass::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 32 of file [BookingClass.hpp](#).

### 32.27.3 Constructor & Destructor Documentation

#### 32.27.3.1 stdair::BookingClass::BookingClass (const Key\_T & iKey) [protected]

Constructor.

Definition at line 49 of file [BookingClass.cpp](#).

#### 32.27.3.2 stdair::BookingClass::~~BookingClass () [protected, virtual]

Destructor.

Definition at line 61 of file [BookingClass.cpp](#).

### 32.27.4 Member Function Documentation

#### 32.27.4.1 const Key\_T& stdair::BookingClass::getKey () const [inline]

Get the booking class key.

Definition at line 37 of file [BookingClass.hpp](#).

References [\\_key](#).

#### 32.27.4.2 const ClassCode\_T& stdair::BookingClass::getClassCode () const [inline]

Get the booking code (part of the primary key).

Definition at line 42 of file [BookingClass.hpp](#).

References [\\_key](#), and [stdair::BookingClassKey::getClassCode\(\)](#).

Referenced by [stdair::CancellationStruct::describe\(\)](#), and [stdair::CancellationStruct::display\(\)](#).

#### 32.27.4.3 BomAbstract\* const stdair::BookingClass::getParent () const [inline]

Get the parent object.

Definition at line 47 of file [BookingClass.hpp](#).

References [\\_parent](#).

#### 32.27.4.4 const HolderMap\_T& stdair::BookingClass::getHolderMap () const [inline]

Get the map of children holders.

Definition at line 52 of file [BookingClass.hpp](#).

References [\\_holderMap](#).

#### 32.27.4.5 const SubclassCode\_T& stdair::BookingClass::getSubclassCode () const [inline]

Get teh sub-class code.

Definition at line 57 of file [BookingClass.hpp](#).

References [\\_subclassCode](#).

#### 32.27.4.6 const AuthorizationLevel\_T& stdair::BookingClass::getAuthorizationLevel () const [inline]

Get the authorisation level (AU, i.e., cumulated protection).

Definition at line 62 of file [BookingClass.hpp](#).

References [\\_au](#).

#### 32.27.4.7 const ProtectionLevel\_T& stdair::BookingClass::getProtection () const [inline]

Get the protection.

Definition at line 67 of file [BookingClass.hpp](#).

References [\\_protection](#).

#### 32.27.4.8 const ProtectionLevel\_T& stdair::BookingClass::getCumulatedProtection () const [inline]

Get the cumulated protection.

Definition at line 72 of file [BookingClass.hpp](#).

References [\\_cumulatedProtection](#).

#### 32.27.4.9 const BookingLimit\_T& stdair::BookingClass::getCumulatedBookingLimit () const [inline]

Get the cumulated booking limit.

Definition at line 77 of file [BookingClass.hpp](#).

References [\\_cumulatedBookingLimit](#).

#### 32.27.4.10 const NbOfSeats\_T& stdair::BookingClass::getNegotiatedSpace () const [inline]

Get the negotiated space.

Definition at line 82 of file [BookingClass.hpp](#).

References [\\_nego](#).

#### 32.27.4.11 const OverbookingRate\_T& stdair::BookingClass::getNoShowPercentage () const [inline]

Get the no-show rate.

Definition at line 87 of file [BookingClass.hpp](#).

References [\\_noShowPercentage](#).

#### 32.27.4.12 const OverbookingRate\_T& stdair::BookingClass::getCancellationPercentage () const [inline]

Get the cancellation rate.

Definition at line 92 of file [BookingClass.hpp](#).

References [\\_cancellationPercentage](#).

#### 32.27.4.13 const NbOfBookings\_T& stdair::BookingClass::getNbOfBookings () const [inline]

Get the number of bookings.

Definition at line 97 of file [BookingClass.hpp](#).

References [\\_nbOfBookings](#).

**32.27.4.14** `const NbOfBookings_T& stdair::BookingClass::getNbOfGroupBookings () const [inline]`

Get the number of group bookings.

Definition at line 102 of file [BookingClass.hpp](#).

References [\\_groupNbOfBookings](#).

**32.27.4.15** `const NbOfBookings_T& stdair::BookingClass::getNbOfPendingGroupBookings () const [inline]`

Get the number of pending group bookings.

Definition at line 107 of file [BookingClass.hpp](#).

References [\\_groupPendingNbOfBookings](#).

**32.27.4.16** `const NbOfBookings_T& stdair::BookingClass::getNbOfStaffBookings () const [inline]`

Get the number of staff bookings.

Definition at line 112 of file [BookingClass.hpp](#).

References [\\_staffNbOfBookings](#).

**32.27.4.17** `const NbOfBookings_T& stdair::BookingClass::getNbOfWLBookings () const [inline]`

Get the number of wait-list bookings.

Definition at line 117 of file [BookingClass.hpp](#).

References [\\_wlNbOfBookings](#).

**32.27.4.18** `const NbOfCancellations_T& stdair::BookingClass::getNbOfCancellations () const [inline]`

Get the number of cancellations.

Definition at line 122 of file [BookingClass.hpp](#).

References [\\_nbOfCancellations](#).

**32.27.4.19** `const NbOfBookings_T& stdair::BookingClass::getETB () const [inline]`

Get the expected number of passengers to board (ETB).

Definition at line 127 of file [BookingClass.hpp](#).

References [\\_etb](#).

**32.27.4.20** `const Availability_T& stdair::BookingClass::getNetClassAvailability () const [inline]`

Get the net segment class availability.

Definition at line 132 of file [BookingClass.hpp](#).

References [\\_netClassAvailability](#).

**32.27.4.21** `const Availability_T& stdair::BookingClass::getSegmentAvailability () const [inline]`

Get the segment class availability.

Definition at line 137 of file [BookingClass.hpp](#).

References [\\_segmentAvailability](#).

**32.27.4.22** `const Availability_T& stdair::BookingClass::getNetRevenueAvailability () const [inline]`

Net revenue availability.

Definition at line 142 of file [BookingClass.hpp](#).

References [\\_netRevenueAvailability](#).

**32.27.4.23** `const Yield_T& stdair::BookingClass::getYield () const [inline]`

Yield.

Definition at line 147 of file [BookingClass.hpp](#).

References [\\_yield](#).

**32.27.4.24** `const Yield_T& stdair::BookingClass::getAdjustedYield () const [inline]`

Definition at line 148 of file [BookingClass.hpp](#).

References [\\_adjustedYield](#).

**32.27.4.25** `const MeanValue_T& stdair::BookingClass::getMean () const [inline]`

Demand distribution.

Definition at line 151 of file [BookingClass.hpp](#).

References [\\_mean](#).

**32.27.4.26** `const StdDevValue_T& stdair::BookingClass::getStdDev () const [inline]`

Definition at line 152 of file [BookingClass.hpp](#).

References [\\_stdDev](#).

**32.27.4.27** `const MeanValue_T& stdair::BookingClass::getPriceDemMean () const` `[inline]`

Definition at line 153 of file [BookingClass.hpp](#).

References [\\_priceDemMean](#).

**32.27.4.28** `const StdDevValue_T& stdair::BookingClass::getPriceDemStdDev () const`  
`[inline]`

Definition at line 154 of file [BookingClass.hpp](#).

References [\\_priceDemStdDev](#).

**32.27.4.29** `const MeanValue_T& stdair::BookingClass::getCumuPriceDemMean () const`  
`[inline]`

Definition at line 155 of file [BookingClass.hpp](#).

References [\\_cumuPriceDemMean](#).

**32.27.4.30** `const StdDevValue_T& stdair::BookingClass::getCumuPriceDemStdDev () const`  
`[inline]`

Definition at line 158 of file [BookingClass.hpp](#).

References [\\_cumuPriceDemStdDev](#).

**32.27.4.31** `const MeanValue_T& stdair::BookingClass::getProductDemMean () const`  
`[inline]`

Definition at line 161 of file [BookingClass.hpp](#).

References [\\_productDemMean](#).

**32.27.4.32** `const StdDevValue_T& stdair::BookingClass::getProductDemStdDev () const`  
`[inline]`

Definition at line 162 of file [BookingClass.hpp](#).

References [\\_productDemStdDev](#).

**32.27.4.33** `const GeneratedDemandVector_T&  
stdair::BookingClass::getGeneratedDemandVector () const  
[inline]`

Generated demand vector.

Definition at line 165 of file [BookingClass.hpp](#).

References [\\_generatedDemandVector](#).

Referenced by [stdair::VirtualClassStruct::getGeneratedDemandVector\(\)](#).

**32.27.4.34** `void stdair::BookingClass::setCumulatedProtection (const ProtectionLevel_T & iPL)  
[inline]`

Cumulated protection.

Definition at line 172 of file [BookingClass.hpp](#).

References [\\_cumulatedProtection](#).

**32.27.4.35** `void stdair::BookingClass::setProtection (const ProtectionLevel_T & iPL) [inline]`

Protection.

Definition at line 177 of file [BookingClass.hpp](#).

References [\\_protection](#).

**32.27.4.36** `void stdair::BookingClass::setCumulatedBookingLimit (const BookingLimit_T & iBL)  
[inline]`

Cumulated booking limit.

Definition at line 182 of file [BookingClass.hpp](#).

References [\\_cumulatedBookingLimit](#).

**32.27.4.37** `void stdair::BookingClass::setAuthorizationLevel (const AuthorizationLevel_T & iAU)  
[inline]`

Authorization level.

Definition at line 187 of file [BookingClass.hpp](#).

References [\\_au](#).

**32.27.4.38** `void stdair::BookingClass::setSegmentAvailability (const Availability_T & iAvl)  
[inline]`

Set availability.

Definition at line 192 of file [BookingClass.hpp](#).

References [\\_segmentAvailability](#).

**32.27.4.39 void stdair::BookingClass::setYield (const Yield\_T & iYield) [inline]**

Yield.

Definition at line 197 of file [BookingClass.hpp](#).References [\\_adjustedYield](#), and [\\_yield](#).**32.27.4.40 void stdair::BookingClass::setAdjustedYield (const Yield\_T & iYield) [inline]**Definition at line 201 of file [BookingClass.hpp](#).References [\\_adjustedYield](#).**32.27.4.41 void stdair::BookingClass::setMean (const MeanValue\_T & iMean) [inline]**

Demand distribution.

Definition at line 204 of file [BookingClass.hpp](#).References [\\_mean](#).**32.27.4.42 void stdair::BookingClass::setStdDev (const StdDevValue\_T & iStdDev) [inline]**Definition at line 205 of file [BookingClass.hpp](#).References [\\_stdDev](#).**32.27.4.43 void stdair::BookingClass::setPriceDemMean (const MeanValue\_T & iMean) [inline]**Definition at line 206 of file [BookingClass.hpp](#).References [\\_priceDemMean](#).**32.27.4.44 void stdair::BookingClass::setPriceDemStdDev (const StdDevValue\_T & iStdDev) [inline]**Definition at line 207 of file [BookingClass.hpp](#).References [\\_priceDemStdDev](#).**32.27.4.45 void stdair::BookingClass::setCumPriceDemMean (const MeanValue\_T & iMean) [inline]**Definition at line 210 of file [BookingClass.hpp](#).

References [\\_cumuPriceDemMean](#).

**32.27.4.46** void stdair::BookingClass::setCumuPriceDemStdDev (const StdDevValue\_T & *iStdDev*) [inline]

Definition at line 212 of file [BookingClass.hpp](#).

References [\\_cumuPriceDemStdDev](#).

**32.27.4.47** void stdair::BookingClass::setProductDemMean (const MeanValue\_T & *iMean*) [inline]

Definition at line 215 of file [BookingClass.hpp](#).

References [\\_productDemMean](#).

**32.27.4.48** void stdair::BookingClass::setProductDemStdDev (const StdDevValue\_T & *iStdDev*) [inline]

Definition at line 218 of file [BookingClass.hpp](#).

References [\\_productDemStdDev](#).

**32.27.4.49** void stdair::BookingClass::toStream (std::ostream & *ioOut*) const [inline, virtual]

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 226 of file [BookingClass.hpp](#).

References [toString\(\)](#).

**32.27.4.50** void stdair::BookingClass::fromStream (std::istream & *ioIn*) [inline, virtual]

Read a Business Object from an input stream.

#### Parameters:

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 232 of file [BookingClass.hpp](#).

**32.27.4.51** `std::string stdair::BookingClass::toString () const [virtual]`

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 65 of file [BookingClass.cpp](#).

References [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

**32.27.4.52** `const std::string stdair::BookingClass::describeKey () const [inline]`

Get a string describing the key.

Definition at line 239 of file [BookingClass.hpp](#).

References [\\_key](#), and [stdair::BookingClassKey::toString\(\)](#).

Referenced by [toString\(\)](#).

**32.27.4.53** `void stdair::BookingClass::sell (const NbOfBookings_T & iNbOfBookings)`

Register a sale.

Definition at line 72 of file [BookingClass.cpp](#).

References [\\_nbOfBookings](#).

**32.27.4.54** `void stdair::BookingClass::cancel (const NbOfBookings_T & iNbOfCancellations)`

Register a cancellation.

Definition at line 77 of file [BookingClass.cpp](#).

References [\\_nbOfBookings](#), and [\\_nbOfCancellations](#).

**32.27.4.55** `void stdair::BookingClass::generateDemandSamples (const NbOfSamples_T & K)`

Generate demand samples for Monte-Carlo method with the default random seed.

Definition at line 83 of file [BookingClass.cpp](#).

References [\\_generatedDemandVector](#), [\\_mean](#), [\\_stdDev](#), [stdair::DEFAULT\\_RANDOM\\_SEED](#), and [stdair::RandomGeneration::generateNormal\(\)](#).

**32.27.4.56** `void stdair::BookingClass::generateDemandSamples (const NbOfSamples_T & K, const RandomSeed_T & iSeed)`

Generate demand samples for Monte-Carlo method with the given random seed.

Definition at line 95 of file [BookingClass.cpp](#).

References [\\_generatedDemandVector](#), [\\_mean](#), [\\_stdDev](#), and [stdair::RandomGeneration::generateNormal\(\)](#).

## 32.27.5 Friends And Related Function Documentation

### 32.27.5.1 friend class FacBom [friend]

Definition at line 25 of file [BookingClass.hpp](#).

### 32.27.5.2 friend class FacCloneBom [friend]

Definition at line 26 of file [BookingClass.hpp](#).

### 32.27.5.3 friend class FacBomManager [friend]

Definition at line 27 of file [BookingClass.hpp](#).

## 32.27.6 Member Data Documentation

### 32.27.6.1 Key\_T stdair::BookingClass::\_key [protected]

Primary key (booking class code).

Definition at line 276 of file [BookingClass.hpp](#).

Referenced by [describeKey\(\)](#), [getClassCode\(\)](#), and [getKey\(\)](#).

### 32.27.6.2 BomAbstract\* stdair::BookingClass::\_parent [protected]

Pointer on the parent class ([SegmentCabin](#)).

Definition at line 279 of file [BookingClass.hpp](#).

Referenced by [getParent\(\)](#).

### 32.27.6.3 HolderMap\_T stdair::BookingClass::\_holderMap [protected]

Map holding the children ([SegmentDate](#) and [LegDate](#) objects).

Definition at line 282 of file [BookingClass.hpp](#).

Referenced by [getHolderMap\(\)](#).

### 32.27.6.4 SubclassCode\_T stdair::BookingClass::\_subclassCode [protected]

Sub-class code.

Definition at line 285 of file [BookingClass.hpp](#).

Referenced by [getSubclassCode\(\)](#).

**32.27.6.5 ProtectionLevel\_T stdair::BookingClass::\_cumulatedProtection [protected]**

Cumulated protection.

Definition at line 288 of file [BookingClass.hpp](#).

Referenced by [getCumulatedProtection\(\)](#), and [setCumulatedProtection\(\)](#).

**32.27.6.6 ProtectionLevel\_T stdair::BookingClass::\_protection [protected]**

Protection.

Definition at line 291 of file [BookingClass.hpp](#).

Referenced by [getProtection\(\)](#), and [setProtection\(\)](#).

**32.27.6.7 BookingLimit\_T stdair::BookingClass::\_cumulatedBookingLimit [protected]**

Cumulated booking limit.

Definition at line 294 of file [BookingClass.hpp](#).

Referenced by [getCumulatedBookingLimit\(\)](#), and [setCumulatedBookingLimit\(\)](#).

**32.27.6.8 AuthorizationLevel\_T stdair::BookingClass::\_au [protected]**

Authorization level.

Definition at line 297 of file [BookingClass.hpp](#).

Referenced by [getAuthorizationLevel\(\)](#), and [setAuthorizationLevel\(\)](#).

**32.27.6.9 NbOfSeats\_T stdair::BookingClass::\_nego [protected]**

Negotiated space.

Definition at line 300 of file [BookingClass.hpp](#).

Referenced by [getNegotiatedSpace\(\)](#).

**32.27.6.10 OverbookingRate\_T stdair::BookingClass::\_noShowPercentage [protected]**

Overbooking rate.

Definition at line 303 of file [BookingClass.hpp](#).

Referenced by [getNoShowPercentage\(\)](#).

**32.27.6.11 OverbookingRate\_T stdair::BookingClass::\_cancellationPercentage [protected]**

Cancellation rate.

Definition at line 306 of file [BookingClass.hpp](#).

Referenced by [getCancellationPercentage\(\)](#).

**32.27.6.12 NbOfBookings\_T stdair::BookingClass::\_nbOfBookings [protected]**

Number of bookings.

Definition at line 309 of file [BookingClass.hpp](#).

Referenced by [cancel\(\)](#), [getNbOfBookings\(\)](#), and [sell\(\)](#).

**32.27.6.13 NbOfBookings\_T stdair::BookingClass::\_groupNbOfBookings [protected]**

Number of group bookings.

Definition at line 312 of file [BookingClass.hpp](#).

Referenced by [getNbOfGroupBookings\(\)](#).

**32.27.6.14 NbOfBookings\_T stdair::BookingClass::\_groupPendingNbOfBookings [protected]**

Number of pending group bookings.

Definition at line 315 of file [BookingClass.hpp](#).

Referenced by [getNbOfPendingGroupBookings\(\)](#).

**32.27.6.15 NbOfBookings\_T stdair::BookingClass::\_staffNbOfBookings [protected]**

Number of staff bookings.

Definition at line 318 of file [BookingClass.hpp](#).

Referenced by [getNbOfStaffBookings\(\)](#).

**32.27.6.16 NbOfBookings\_T stdair::BookingClass::\_wlnbOfBookings [protected]**

Number of wait-list bookings.

Definition at line 321 of file [BookingClass.hpp](#).

Referenced by [getNbOfWLBookings\(\)](#).

**32.27.6.17 NbOfCancellations\_T stdair::BookingClass::\_nbOfCancellations [protected]**

Number of cancellations.

Definition at line 324 of file [BookingClass.hpp](#).

Referenced by [cancel\(\)](#), and [getNbOfCancellations\(\)](#).

**32.27.6.18 NbOfBookings\_T stdair::BookingClass::\_etb [protected]**

Expected to board (ETB).

Definition at line 327 of file [BookingClass.hpp](#).

Referenced by [getETB\(\)](#).

**32.27.6.19 Availability\_T stdair::BookingClass::\_netClassAvailability [protected]**

Net segment class availability.

Definition at line 330 of file [BookingClass.hpp](#).

Referenced by [getNetClassAvailability\(\)](#).

**32.27.6.20 Availability\_T stdair::BookingClass::\_segmentAvailability [protected]**

Segment class availability.

- [BookingClassKey](#) (const [BookingClassKey](#) &)
- [~BookingClassKey](#) ()
- const [ClassCode\\_T](#) & [getClassCode](#) () const
- void [toStream](#) (std::ostream &ioOut) const
- void [fromStream](#) (std::istream &ioIn)
- const std::string [toString](#) () const

### 32.28.1 Detailed Description

Key of a given leg-cabin, made of a cabin code.

Definition at line 16 of file [BookingClassKey.hpp](#).

### 32.28.2 Constructor & Destructor Documentation

#### 32.28.2.1 stdair::BookingClassKey::BookingClassKey (const ClassCode\_T &iClassCode)

Constructor.

Definition at line 24 of file [BookingClassKey.cpp](#).

#### 32.28.2.2 stdair::BookingClassKey::BookingClassKey (const BookingClassKey &iKey)

Default copy constructor.

Definition at line 19 of file [BookingClassKey.cpp](#).

#### 32.28.2.3 stdair::BookingClassKey::~~BookingClassKey ()

Destructor.

Definition at line 29 of file [BookingClassKey.cpp](#).

### 32.28.3 Member Function Documentation

#### 32.28.3.1 const ClassCode\_T& stdair::BookingClassKey::getClassCode () const [inline]

Get the class code.

Definition at line 34 of file [BookingClassKey.hpp](#).

Referenced by [stdair::BookingClass::getClassCode\(\)](#).

#### 32.28.3.2 void stdair::BookingClassKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

##### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 33 of file [BookingClassKey.cpp](#).

References [toString\(\)](#).

#### 32.28.3.3 void stdair::BookingClassKey::fromStream (std::istream & ioIn) [virtual]

Read a Business Object Key from an input stream.

##### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 38 of file [BookingClassKey.cpp](#).

#### 32.28.3.4 const std::string stdair::BookingClassKey::toString () const [virtual]

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-cabin.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 42 of file [BookingClassKey.cpp](#).

Referenced by [stdair::BookingClass::describeKey\(\)](#), and [toStream\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/BookingClassKey.hpp](#)
- [stdair/bom/BookingClassKey.cpp](#)

Default constructor.

Definition at line 63 of file [BookingRequestStruct.cpp](#).

- 32.30.2.2** [stdair::BookingRequestStruct::BookingRequestStruct](#) (const [AirportCode\\_T](#) &*iOrigin*, const [AirportCode\\_T](#) &*iDestination*, const [CityCode\\_T](#) &*iPOS*, const [Date\\_T](#) &*iDepartureDate*, const [DateTime\\_T](#) &*iRequestDateTime*, const [CabinCode\\_T](#) &*iPreferredCabin*, const [NbOfSeats\\_T](#) &*iPartySize*, const [ChannelLabel\\_T](#) &*iChannel*, const [TripType\\_T](#) &*iTripType*, const [DayDuration\\_T](#) &*iStayDuration*, const [FrequentFlyer\\_T](#) &*iFrequentFlyerType*, const [Duration\\_T](#) &*iPreferredDepartureTime*, const [WTP\\_T](#) &*iWTP*, const [PriceValue\\_T](#) &*iValueOfTime*, const [ChangeFees\\_T](#) &*iChangeFees*, const [Disutility\\_T](#) &*iChangeFeeDisutility*, const [NonRefundable\\_T](#) &*iNonRefundable*, const [Disutility\\_T](#) &*iNonRefundableDisutility*)

Constructor without the demand generator key, used for batches.

Definition at line 98 of file [BookingRequestStruct.cpp](#).

### 32.30.2.3 stdair::BookingRequestStruct::BookingRequestStruct (const BookingRequestStruct & iBookingRequest)

Copy constructor.

Definition at line 39 of file [BookingRequestStruct.cpp](#).

### 32.30.2.4 stdair::BookingRequestStruct::~~BookingRequestStruct ()

Destructor.

Definition at line 131 of file [BookingRequestStruct.cpp](#).

## 32.30.3 Member Function Documentation

### 32.30.3.1 const DemandGeneratorKey\_T& stdair::BookingRequestStruct::getDemandGeneratorKey () const [inline]

Get the demand generator key.

Definition at line 25 of file [BookingRequestStruct.hpp](#).

### 32.30.3.2 const AirportCode\_T& stdair::BookingRequestStruct::getOrigin () const [inline]

Get the requested origin.

Definition at line 30 of file [BookingRequestStruct.hpp](#).

Referenced by [stdair::BomJSONExport::jsonExportBookingRequestObject\(\)](#).

### 32.30.3.3 const AirportCode\_T& stdair::BookingRequestStruct::getDestination () const [inline]

Get the requested destination.

Definition at line 35 of file [BookingRequestStruct.hpp](#).

Referenced by [stdair::BomJSONExport::jsonExportBookingRequestObject\(\)](#).

### 32.30.3.4 const CityCode\_T& stdair::BookingRequestStruct::getPOS () const [inline]

Get the point-of-sale.

Definition at line 40 of file [BookingRequestStruct.hpp](#).

Referenced by [stdair::BomJSONExport::jsonExportBookingRequestObject\(\)](#).

### 32.30.3.5 const Date\_T& stdair::BookingRequestStruct::getPreferredDepartureDate () const [inline]

Get the requested departure date.

Definition at line 45 of file [BookingRequestStruct.hpp](#).

Referenced by [stdair::BomJSONExport::jsonExportBookingRequestObject\(\)](#).

**32.30.3.6** `const Duration_T& stdair::BookingRequestStruct::getPreferredDepartureTime () const [inline]`

Get the preferred departure time.

Definition at line 50 of file [BookingRequestStruct.hpp](#).

Referenced by [stdair::BomJSONExport::jsonExportBookingRequestObject\(\)](#).

**32.30.3.7** `const DateTime_T& stdair::BookingRequestStruct::getRequestDateTime () const [inline]`

Get the request datetime.

Definition at line 55 of file [BookingRequestStruct.hpp](#).

Referenced by [stdair::BomJSONExport::jsonExportBookingRequestObject\(\)](#).

**32.30.3.8** `const CabinCode_T& stdair::BookingRequestStruct::getPreferredCabin () const [inline]`

Get the preferred cabin.

Definition at line 60 of file [BookingRequestStruct.hpp](#).

Referenced by [stdair::BomJSONExport::jsonExportBookingRequestObject\(\)](#).

**32.30.3.9** `const NbOfSeats_T& stdair::BookingRequestStruct::getPartySize () const [inline]`

Get the party size.

Definition at line 65 of file [BookingRequestStruct.hpp](#).

Referenced by [stdair::BomJSONExport::jsonExportBookingRequestObject\(\)](#).

**32.30.3.10** `const ChannelLabel_T& stdair::BookingRequestStruct::getBookingChannel () const [inline]`

Get the reservation channel.

Definition at line 70 of file [BookingRequestStruct.hpp](#).

Referenced by [stdair::BomJSONExport::jsonExportBookingRequestObject\(\)](#).

**32.30.3.11** `const TripType_T& stdair::BookingRequestStruct::getTripType () const [inline]`

Get the trip type.

Definition at line 75 of file [BookingRequestStruct.hpp](#).

**32.30.3.12** `const DayDuration_T& stdair::BookingRequestStruct::getStayDuration () const [inline]`

Get the duration of stay.

Definition at line 80 of file [BookingRequestStruct.hpp](#).

Referenced by [stdair::BomJSONExport::jsonExportBookingRequestObject\(\)](#).

**32.30.3.13** `const FrequentFlyer_T& stdair::BookingRequestStruct::getFrequentFlyerType () const [inline]`

Get the frequent flyer type.

Definition at line 85 of file [BookingRequestStruct.hpp](#).

**32.30.3.14** `const WTP_T& stdair::BookingRequestStruct::getWTP () const [inline]`

Get the willingness-to-pay.

Definition at line 90 of file [BookingRequestStruct.hpp](#).

Referenced by [stdair::BomJSONExport::jsonExportBookingRequestObject\(\)](#).

**32.30.3.15** `const PriceValue_T& stdair::BookingRequestStruct::getValueOfTime () const [inline]`

Get the value of time.

Definition at line 95 of file [BookingRequestStruct.hpp](#).

**32.30.3.16** `const ChangeFees_T& stdair::BookingRequestStruct::getChangeFees () const [inline]`

Get the change fee acceptance.

Definition at line 100 of file [BookingRequestStruct.hpp](#).

**32.30.3.17** `const Disutility_T& stdair::BookingRequestStruct::getChangeFeeDisutility () const [inline]`

Get the change disutility.

Definition at line 105 of file [BookingRequestStruct.hpp](#).

**32.30.3.18** `const NonRefundable_T& stdair::BookingRequestStruct::getNonRefundable () const [inline]`

Get the non refundable acceptance.

Definition at line 110 of file [BookingRequestStruct.hpp](#).

**32.30.3.19** `const Disutility_T& stdair::BookingRequestStruct::getNonRefundableDisutility () const [inline]`

Get the non refundable disutility.

Definition at line 115 of file [BookingRequestStruct.hpp](#).

**32.30.3.20** `void stdair::BookingRequestStruct::toStream (std::ostream & ioOut) const`

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 135 of file [BookingRequestStruct.cpp](#).

References [describe\(\)](#).

**32.30.3.21** `void stdair::BookingRequestStruct::fromStream (std::istream & ioIn) [virtual]`

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 140 of file [BookingRequestStruct.cpp](#).

**32.30.3.22** `const std::string stdair::BookingRequestStruct::describe () const [virtual]`

Display of the structure.

Implements [stdair::StructAbstract](#).

Definition at line 144 of file [BookingRequestStruct.cpp](#).

Referenced by [toStream\(\)](#).

**32.30.3.23** `const std::string stdair::BookingRequestStruct::display () const`

Display of the structure.

- id,
- request\_date (YYMMDD),
- request\_time (HHMMSS),
- POS (three-letter code),
- Channel (two-letter code):

- 'D' for direct or 'I' for indirect,
  - 'N' for oNline or 'F' for oFfline,
- Origin (three-letter code),
- Destination (three-letter code),
- Preferred departure date (YYMMDD),
- Preferred departure time (HHMM),
- Min departure time (HHMM),
- Max departure time (HHMM),
- Preferred arrival date (YYMMDD),
- Preferred arrival time (HHMM),
- Preferred cabin:
  - 'F' for first,
  - 'C' for club/business,
  - 'W' for economy plus,
  - 'M' for economy,
- Trip type:
  - 'OW' for a one-way trip,
  - 'RO' for the outbound part of a rount-trip,
  - 'RI' for the inbound part of a rount-trip,
- Duration of stay (expressed as a number of days),
- Frequent flyer tier:
  - 'G' for gold,
  - 'S' for silver,
  - 'K' for basic,
  - 'N' for none,
- Willingness-to-pay (WTP, expressed as a monetary unit, e.g., EUR),
- Disutility per stop (expressed as a monetary unit, e.g., EUR),
- Value of time (EUR per hour),

**Returns:**

`const std::string` The output of the booking request structure.

Definition at line 169 of file [BookingRequestStruct.cpp](#).

References [stdair::TRIP\\_TYPE\\_ONE\\_WAY](#).

- class [FacBomManager](#)
- class [boost::serialization::access](#)

### 32.32.1 Detailed Description

Class representing the actual attributes for an airline booking class.

Definition at line 29 of file [Bucket.hpp](#).

### 32.32.2 Member Typedef Documentation

#### 32.32.2.1 typedef BucketKey stdair::Bucket::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 40 of file [Bucket.hpp](#).

### 32.32.3 Constructor & Destructor Documentation

#### 32.32.3.1 stdair::Bucket::Bucket (const Key\_T & iKey) [protected]

Default constructor.

Definition at line 34 of file [Bucket.cpp](#).

#### 32.32.3.2 stdair::Bucket::~~Bucket () [protected, virtual]

Destructor.

Definition at line 38 of file [Bucket.cpp](#).

### 32.32.4 Member Function Documentation

#### 32.32.4.1 const Key\_T& stdair::Bucket::getKey () const [inline]

Get the primary key of the bucket.

Definition at line 47 of file [Bucket.hpp](#).

References [\\_key](#).

#### 32.32.4.2 BomAbstract\* const stdair::Bucket::getParent () const [inline]

Get the parent object.

Definition at line 54 of file [Bucket.hpp](#).

References [\\_parent](#).

**32.32.4.3 const HolderMap\_T& stdair::Bucket::getHolderMap () const [inline]**

Get the map of children holders.

Definition at line 59 of file [Bucket.hpp](#).

References [\\_holderMap](#).

**32.32.4.4 const SeatIndex\_T& stdair::Bucket::getSeatIndex () const [inline]**

Get the seat index (part of the primary key).

Definition at line 64 of file [Bucket.hpp](#).

References [\\_key](#), and [stdair::BucketKey::getSeatIndex\(\)](#).

**32.32.4.5 const Yield\_T& stdair::Bucket::getYieldRangeUpperValue () const [inline]**

Get the upper yield range.

Definition at line 69 of file [Bucket.hpp](#).

References [\\_yieldRangeUpperValue](#).

**32.32.4.6 const CabinCapacity\_T& stdair::Bucket::getAvailability () const [inline]**

Get the availability.

Definition at line 74 of file [Bucket.hpp](#).

References [\\_availability](#).

**32.32.4.7 const NbOfSeats\_T& stdair::Bucket::getSoldSeats () const [inline]**

Get the number of seats already sold.

Definition at line 79 of file [Bucket.hpp](#).

References [\\_soldSeats](#).

**32.32.4.8 void stdair::Bucket::setYieldRangeUpperValue (const Yield\_T & iYield) [inline]**

Set the upper yield range.

Definition at line 86 of file [Bucket.hpp](#).

References [\\_yieldRangeUpperValue](#).

**32.32.4.9 void stdair::Bucket::setAvailability (const CabinCapacity\_T & iAvl) [inline]**

Set the availability.

Definition at line 91 of file [Bucket.hpp](#).

References [\\_availability](#).

**32.32.4.10 void stdair::Bucket::setSoldSeats (const NbOfSeats\_T & iSoldSeats) [inline]**

Set the number of seats already sold.

Definition at line 96 of file [Bucket.hpp](#).

References [\\_soldSeats](#).

**32.32.4.11 void stdair::Bucket::toStream (std::ostream & ioOut) const [inline, virtual]**

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 108 of file [Bucket.hpp](#).

References [toString\(\)](#).

**32.32.4.12 void stdair::Bucket::fromStream (std::istream & ioIn) [inline, virtual]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 117 of file [Bucket.hpp](#).

**32.32.4.13 std::string stdair::Bucket::toString () const [virtual]**

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 42 of file [Bucket.cpp](#).

References [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

**32.32.4.14 const std::string stdair::Bucket::describeKey () const [inline]**

Get a string describing the key.

Definition at line 128 of file [Bucket.hpp](#).

References [\\_key](#), and [stdair::BucketKey::toString\(\)](#).

Referenced by [toString\(\)](#).

**32.32.4.15** `template<class Archive > void stdair::Bucket::serialize (Archive & ar, const unsigned int iFileVersion) [inline]`

Serialisation.

Definition at line 64 of file [Bucket.cpp](#).

References [\\_key](#).

## 32.32.5 Friends And Related Function Documentation

**32.32.5.1** `friend class FacBom [friend]`

Definition at line 30 of file [Bucket.hpp](#).

**32.32.5.2** `friend class FacCloneBom [friend]`

Definition at line 31 of file [Bucket.hpp](#).

**32.32.5.3** `friend class FacBomManager [friend]`

Definition at line 32 of file [Bucket.hpp](#).

**32.32.5.4** `friend class boost::serialization::access [friend]`

Definition at line 33 of file [Bucket.hpp](#).

## 32.32.6 Member Data Documentation

**32.32.6.1** `Key_T stdair::Bucket::_key [protected]`

Primary key (upper yield range).

Definition at line 179 of file [Bucket.hpp](#).

Referenced by [describeKey\(\)](#), [getKey\(\)](#), [getSeatIndex\(\)](#), and [serialize\(\)](#).

**32.32.6.2** `BomAbstract* stdair::Bucket::_parent [protected]`

Pointer on the parent class ([LegCabin](#)).

Definition at line 184 of file [Bucket.hpp](#).

Referenced by [getParent\(\)](#).

**32.32.6.3 HolderMap\_T stdair::Bucket::\_holderMap [protected]**

Map holding the children (empty for now).

Definition at line 189 of file [Bucket.hpp](#).

Referenced by [getHolderMap\(\)](#).

**32.32.6.4 Yield\_T stdair::Bucket::\_yieldRangeUpperValue [protected]**

Upper yield range.

Definition at line 197 of file [Bucket.hpp](#).

Referenced by [getYieldRangeUpperValue\(\)](#), and [setYieldRangeUpperValue\(\)](#).

**32.32.6.5 CabinCapacity\_T stdair::Bucket::\_availability [protected]**

Availability.

Definition at line 202 of file [Bucket.hpp](#).

Referenced by [getAvailability\(\)](#), and [setAvailability\(\)](#).

**32.32.6.6 NbOfSeats\_T stdair::Bucket::\_soldSeats [protected]**

Number of seats already sold.

Definition at line 207 of file [Bucket.hpp](#).

Referenced by [getSoldSeats\(\)](#), and [setSoldSeats\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/bom/Bucket.hpp](#)
- [stdair/bom/Bucket.cpp](#)

**32.33 stdair::BucketKey Struct Reference**

Key of booking-class.

`#include <stdair/bom/BucketKey.hpp>`Inheritance diagram for stdair::BucketKey::

**Public Member Functions**

- template<class Archive >  
void [serialize](#) (Archive &ar, const unsigned int iFileVersion)

## Friends

- class [boost::serialization::access](#)

### 32.33.1 Detailed Description

Key of booking-class.

Definition at line 26 of file [BucketKey.hpp](#).

### 32.33.2 Constructor & Destructor Documentation

#### 32.33.2.1 stdair::BucketKey::BucketKey (const SeatIndex\_T & iSeatIndex)

Main constructor.

Definition at line 22 of file [BucketKey.cpp](#).

#### 32.33.2.2 stdair::BucketKey::BucketKey (const BucketKey & iBucketKey)

Copy constructor.

Definition at line 27 of file [BucketKey.cpp](#).

#### 32.33.2.3 stdair::BucketKey::~~BucketKey ()

Destructor.

Definition at line 32 of file [BucketKey.cpp](#).

### 32.33.3 Member Function Documentation

#### 32.33.3.1 const SeatIndex\_T& stdair::BucketKey::getSeatIndex () const [inline]

Get the seat index.

Definition at line 54 of file [BucketKey.hpp](#).

Referenced by [stdair::Bucket::getSeatIndex\(\)](#).

#### 32.33.3.2 void stdair::BucketKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 36 of file [BucketKey.cpp](#).

References [toString\(\)](#).

**32.33.3.3 void stdair::BucketKey::fromStream (std::istream & ioIn) [virtual]**

Read a Business Object Key from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 41 of file [BucketKey.cpp](#).

**32.33.3.4 const std::string stdair::BucketKey::toString () const [virtual]**

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-cabin.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 45 of file [BucketKey.cpp](#).

Referenced by [stdair::Bucket::describeKey\(\)](#), and [toString\(\)](#).

**32.33.3.5 template<class Archive > void stdair::BucketKey::serialize (Archive & ar, const unsigned int iFileVersion) [inline]**

Serialisation.

Definition at line 67 of file [BucketKey.cpp](#).

**32.33.4 Friends And Related Function Documentation****32.33.4.1 friend class boost::serialization::access [friend]**

Definition at line 27 of file [BucketKey.hpp](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/BucketKey.hpp](#)
- [stdair/bom/BucketKey.cpp](#)

## 32.34 stdair\_test::Cabin Struct Reference

```
#include <test/stdair/StdairTestLib.hpp>
```

### Public Types

- typedef [BookingClass](#) [child](#)

### Public Member Functions

- [Cabin](#) (const [BookingClass](#) &iBkgClass)
- std::string [toString](#) () const

### Public Attributes

- [BookingClass](#) [\\_bookingClass](#)

#### 32.34.1 Detailed Description

##### [Cabin](#)

Definition at line 32 of file [StdairTestLib.hpp](#).

#### 32.34.2 Member Typedef Documentation

##### 32.34.2.1 typedef [BookingClass](#) stdair\_test::Cabin::child

Child type.

Definition at line 46 of file [StdairTestLib.hpp](#).

#### 32.34.3 Constructor & Destructor Documentation

##### 32.34.3.1 stdair\_test::Cabin::Cabin (const [BookingClass](#) &iBkgClass) [inline]

Definition at line 34 of file [StdairTestLib.hpp](#).

#### 32.34.4 Member Function Documentation

##### 32.34.4.1 std::string stdair\_test::Cabin::toString () const [inline]

Display .

Definition at line 39 of file [StdairTestLib.hpp](#).

References [\\_bookingClass](#), and [stdair\\_test::BookingClass::\\_classCode](#).

### 32.34.5 Member Data Documentation

#### 32.34.5.1 BookingClass stdair\_test::Cabin::\_bookingClass

Definition at line 33 of file [StdairTestLib.hpp](#).

Referenced by [toString\(\)](#).

The documentation for this struct was generated from the following file:

- test/stdair/[StdairTestLib.hpp](#)

## 32.35 stdair::CancellationStruct Struct Reference

Structure holding the elements of a travel solution.

### 32.35.1 Detailed Description

Structure holding the elements of a travel solution.

Definition at line 23 of file [CancellationStruct.hpp](#).

### 32.35.2 Constructor & Destructor Documentation

#### 32.35.2.1 stdair::CancellationStruct::CancellationStruct (const SegmentPath\_T & *iSegPath*, const ClassList\_String\_T & *iList*, const PartySize\_T & *iSize*, const DateTime\_T & *iDateTime*)

Default constructor without class ID list.

Definition at line 14 of file [CancellationStruct.cpp](#).

#### 32.35.2.2 stdair::CancellationStruct::CancellationStruct (const SegmentPath\_T & *iSegPath*, const BookingClassIDList\_T & *iDList*, const PartySize\_T & *iSize*, const DateTime\_T & *iDateTime*)

Default constructor with class ID list.

Definition at line 23 of file [CancellationStruct.cpp](#).

#### 32.35.2.3 stdair::CancellationStruct::~CancellationStruct ()

Destructor.

Definition at line 32 of file [CancellationStruct.cpp](#).

### 32.35.3 Member Function Documentation

#### 32.35.3.1 const SegmentPath\_T& stdair::CancellationStruct::getSegmentPath () const [inline]

Get the segment path.

Definition at line 27 of file [CancellationStruct.hpp](#).

#### 32.35.3.2 const ClassList\_String\_T& stdair::CancellationStruct::getClassList () const [inline]

Get the class list.

Definition at line 32 of file [CancellationStruct.hpp](#).

#### 32.35.3.3 const BookingClassIDList\_T& stdair::CancellationStruct::getClassIDList () const [inline]

Get the class ID list.

Definition at line 37 of file [CancellationStruct.hpp](#).

#### 32.35.3.4 const PartySize\_T& stdair::CancellationStruct::getPartySize () const [inline]

Get the party size.

Definition at line 42 of file [CancellationStruct.hpp](#).

### 32.35.3.5 `const DateTime_T& stdair::CancellationStruct::getCancellationDateTime () const [inline]`

Get the datetime.

Definition at line 47 of file [CancellationStruct.hpp](#).

### 32.35.3.6 `void stdair::CancellationStruct::toStream (std::ostream & ioOut) const`

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 36 of file [CancellationStruct.cpp](#).

References [describe\(\)](#).

### 32.35.3.7 `void stdair::CancellationStruct::fromStream (std::istream & ioIn) [virtual]`

Read a Business Object from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 41 of file [CancellationStruct.cpp](#).

### 32.35.3.8 `const std::string stdair::CancellationStruct::describe () const [virtual]`

Display of the structure.

Implements [stdair::StructAbstract](#).

Definition at line 45 of file [CancellationStruct.cpp](#).

References [stdair::BookingClass::getClassCode\(\)](#), and [stdair::BomID< BOM >::getObject\(\)](#).

Referenced by [toStream\(\)](#).

### 32.35.3.9 `const std::string stdair::CancellationStruct::display () const`

Display of the structure.

Definition at line 81 of file [CancellationStruct.cpp](#).

References [stdair::BookingClass::getClassCode\(\)](#), and [stdair::BomID< BOM >::getObject\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/CancellationStruct.hpp](#)
- [stdair/bom/CancellationStruct.cpp](#)

## 32.36 stdair::CmdAbstract Class Reference

`#include <stdair/command/CmdAbstract.hpp>`  
 stdair::CmdAbstract::

diagram

#### 32.41.1 Detailed Description

Code duplication.

Definition at line 141 of file [stdair\\_exceptions.hpp](#).

#### 32.41.2 Constructor & Destructor Documentation

##### 32.41.2.1 stdair::CodeDuplicationException::CodeDuplicationException (const std::string &iWhat) [inline]

Constructor.

Definition at line 144 of file [stdair\\_exceptions.hpp](#).

### 32.41.3 Member Function Documentation

#### 32.41.3.1 `const char* stdair::RootException::what () const throw ()` [`inline`, `inherited`]

Give the details of the exception.

Definition at line 38 of file [stdair\\_exceptions.hpp](#).

References [stdair::RootException::\\_what](#).

Referenced by [stdair::ConfigHolderStruct::updateAirlineFeatures\(\)](#).

### 32.41.4 Member Data Documentation

#### 32.41.4.1 `std::string stdair::RootException::_what` [`protected`, `inherited`]

Details for the exception.

Definition at line 46 of file [stdair\\_exceptions.hpp](#).

Referenced by [stdair::RootException::what\(\)](#).

The documentation for this class was generated from the following file:

- [stdair/stdair\\_exceptions.hpp](#)

## 32.42 COMMAND Struct Reference

```
#include <stdair/ui/cmdline/readline_autocomp.hpp>
```

### Public Attributes

- `char const * name`
- `pt2Func * func`
- `char * doc`

### 32.42.1 Detailed Description

A structure which contains information on the commands this program can understand.

Definition at line 41 of file [readline\\_autocomp.hpp](#).

### 32.42.2 Member Data Documentation

#### 32.42.2.1 `char const* COMMAND::name`

User printable name of the function.

Definition at line 45 of file [readline\\_autocomp.hpp](#).

Referenced by [com\\_help\(\)](#), and [find\\_command\(\)](#).

## 32.42.2.2 pt2Func\* COMMAND::func

Function to call to do the job.

Definition at line 50 of file [readline\\_autocomp.hpp](#).

Referenced by [execute\\_line\(\)](#).

## 32.42.2.3 char\* COMMAND::doc

Documentation for this function.

Definition at line 55 of file [readline\\_autocomp.hpp](#).

The documentation for this struct was generated from the following file:

- [stdair/ui/cmdline/readline\\_autocomp.hpp](#)

## 32.43 stdair::ConfigHolderStruct Struct Reference

## 32.43.1 Detailed Description

Structure holding the configuration of the simulation.

Definition at line 40 of file [ConfigHolderStruct.hpp](#).

### 32.43.2 Constructor & Destructor Documentation

#### 32.43.2.1 stdair::ConfigHolderStruct::ConfigHolderStruct ()

Constructor.

Definition at line 27 of file [ConfigHolderStruct.cpp](#).

#### 32.43.2.2 stdair::ConfigHolderStruct::ConfigHolderStruct (const ConfigHolderStruct & iConfigHolderStruct)

Copy constructor.

Definition at line 32 of file [ConfigHolderStruct.cpp](#).

#### 32.43.2.3 stdair::ConfigHolderStruct::~~ConfigHolderStruct ()

Destructor.

Definition at line 37 of file [ConfigHolderStruct.cpp](#).

### 32.43.3 Member Function Documentation

#### 32.43.3.1 void stdair::ConfigHolderStruct::add (const bpt::ptree & iConfigPropertyTree)

Merge the given property tree with the existing configuration property tree gathering all the configuration information.

##### Parameters:

**const** [bpt::ptree](#)& Property tree to add to the configuration tree.

Definition at line 144 of file [ConfigHolderStruct.cpp](#).

Referenced by [stdair::BomINIImport::importINIConfig\(\)](#), and [stdair::BomJSONImport::jsonImportConfig\(\)](#).

#### 32.43.3.2 bool stdair::ConfigHolderStruct::addValue (const std::string & iValue, const std::string & iPath)

Create the given specified path in the configuration tree and add the corresponding given value (or replace the value if the path already exists).

##### Parameters:

**const** [std::string](#)& Value to add at the given path.

**const** [std::string](#)& Path to create (or to look for).

Definition at line 191 of file [ConfigHolderStruct.cpp](#).

Referenced by [stdair::STDAIR\\_Service::importConfigValue\(\)](#).

### 32.43.3.3 `template<typename ValueType > bool stdair::ConfigHolderStruct::exportValue (ValueType & ioValue, const std::string & iPath) const [inline]`

Look for the specified path in the configuration tree and, if existing, try to extract the corresponding value. The type of the value to extract is a template parameter.

#### Parameters:

***ValueType&*** Value to add in the configuration tree.

***const*** std::string& Path to look for.

Definition at line 144 of file [ConfigHolderStruct.hpp](#).

Referenced by [stdair::STDAIR\\_Service::exportConfigValue\(\)](#).

### 32.43.3.4 `void stdair::ConfigHolderStruct::updateAirlineFeatures (BomRoot & iBomRoot)`

Update the airline features objects thanks to the configuration holder.

#### Parameters:

***BomRoot&*** Reference on the [BomRoot](#) to update.

Definition at line 220 of file [ConfigHolderStruct.cpp](#).

References [stdair::BomRetriever::retrieveAirlineFeatureFromKey\(\)](#), [stdair::AirlineFeature::setForecastingMethod\(\)](#), [stdair::AirlineFeature::setOptimisationMethod\(\)](#), [stdair::AirlineFeature::setPartnershipTechnique\(\)](#), [stdair::AirlineFeature::setPreOptimisationMethod\(\)](#), [stdair::AirlineFeature::setUnconstrainingMethod\(\)](#), [STDAIR\\_LOG\\_ERROR](#), and [stdair::RootException::what\(\)](#).

### 32.43.3.5 `void stdair::ConfigHolderStruct::toStream (std::ostream & ioOut) const`

Dump a Business Object into an output stream.

#### Parameters:

***ostream&*** the output stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 41 of file [ConfigHolderStruct.cpp](#).

References [describe\(\)](#).

### 32.43.3.6 `void stdair::ConfigHolderStruct::fromStream (std::istream & ioIn) [virtual]`

Read a Business Object from an input stream.

#### Parameters:

***istream&*** the input stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 46 of file [ConfigHolderStruct.cpp](#).

**32.43.3.7** `const std::string stdair::ConfigHolderStruct::describe () const` `[virtual]`

Display of the structure.

Implements [stdair::StructAbstract](#).

Definition at line 50 of file [ConfigHolderStruct.cpp](#).

Referenced by [stdair::STDAIR\\_Service::configDisplay\(\)](#), and [toStream\(\)](#).

**32.43.3.8** `const std::string stdair::ConfigHolderStruct::jsonExport () const`

Display of the configuration in a JSON-ified format.

Definition at line 134 of file [ConfigHolderStruct.cpp](#).

Referenced by [stdair::STDAIR\\_Service::jsonExportConfiguration\(\)](#).

**32.43.3.9** `template<> bool stdair::ConfigHolderStruct::exportValue (Date_T &ioValue, const std::string &iPath) const` `[inline]`

The documentation for this struct was generated from the following files:

- [stdair/bom/ConfigHolderStruct.hpp](#)
- [stdair/bom/ConfigHolderStruct.cpp](#)

**32.44** **stdair::ConfigINIFile Class Reference**

`#include <stdair/stdair_file.hpp>`Inheritance diagram for `stdair::ConfigINIFile`:

**Public Member Functions**

- [ConfigINIFile](#) (const [Filename\\_T](#) &iFilename)
- `const char * name () const`

**Protected Attributes**

- `const Filename\_T _filename`

### 32.44.1 Detailed Description

Config file: INI format

Definition at line 112 of file [stdair\\_file.hpp](#).

### 32.44.2 Constructor & Destructor Documentation

#### 32.44.2.1 stdair::ConfigINIFile::ConfigINIFile (const Filename\_T & iFilename) [inline, explicit]

Constructor.

Definition at line 117 of file [stdair\\_file.hpp](#).

### 32.44.3 Member Function Documentation

#### 32.44.3.1 const char\* stdair::RootFilePath::name () const [inline, inherited]

Give the details of the exception.

Definition at line 42 of file [stdair\\_file.hpp](#).

References [stdair::RootFilePath::\\_filename](#).

Referenced by [stdair::BomINIImport::importINIConfig\(\)](#).

### 32.44.4 Member Data Documentation

#### 32.44.4.1 const Filename\_T stdair::RootFilePath::\_filename [protected, inherited]

Name of the file.

Definition at line 50 of file [stdair\\_file.hpp](#).

Referenced by [stdair::RootFilePath::name\(\)](#).

The documentation for this class was generated from the following file:

- [stdair/stdair\\_file.hpp](#)

## 32.45 stdair::ContinuousAttributeLite< T > Struct Template Reference

Class modeling the distribution of values that can be taken by a continuous attribute.

```
#include <stdair/basic/ContinuousAttributeLite.hpp>
```

### Public Types

- typedef std::map< T, [stdair::Probability\\_T](#) > [ContinuousDistribution\\_T](#)

### Public Member Functions

- const T [getValue](#) (const [stdair::Probability\\_T](#) &iCumulativeProbability) const

- `const stdair::Probability_T getRemainingProportion (const T &iValue) const`
- `const double getDerivativeValue (const T iKey) const`
- `const T getUpperBound (const T iKey) const`
- `const std::string displayCumulativeDistribution () const`
- `ContinuousAttributeLite (const ContinuousDistribution_T &iValueMap)`
- `ContinuousAttributeLite (const ContinuousAttributeLite &iCAL)`
- `ContinuousAttributeLite & operator= (const ContinuousAttributeLite &iCAL)`
- `virtual ~ContinuousAttributeLite ()`

### 32.45.1 Detailed Description

`template<typename T> struct stdair::ContinuousAttributeLite< T >`

Class modeling the distribution of values that can be taken by a continuous attribute.

Definition at line 26 of file [ContinuousAttributeLite.hpp](#).

### 32.45.2 Member Typedef Documentation

**32.45.2.1** `template<typename T > typedef std::map<T, stdair::Probability_T>  
stdair::ContinuousAttributeLite< T >::ContinuousDistribution_T`

Type for the probability mass function.

Definition at line 32 of file [ContinuousAttributeLite.hpp](#).

### 32.45.3 Constructor & Destructor Documentation

**32.45.3.1** `template<typename T > stdair::ContinuousAttributeLite< T  
>::ContinuousAttributeLite (const ContinuousDistribution_T &iValueMap)  
[inline]`

Constructor.

Definition at line 204 of file [ContinuousAttributeLite.hpp](#).

**32.45.3.2** `template<typename T > stdair::ContinuousAttributeLite< T  
>::ContinuousAttributeLite (const ContinuousAttributeLite< T > &iCAL)  
[inline]`

Copy constructor.

Definition at line 212 of file [ContinuousAttributeLite.hpp](#).

**32.45.3.3** `template<typename T > virtual stdair::ContinuousAttributeLite< T  
>::~~ContinuousAttributeLite () [inline, virtual]`

Destructor.

Definition at line 231 of file [ContinuousAttributeLite.hpp](#).

## 32.45.4 Member Function Documentation

**32.45.4.1** `template<typename T> const T stdair::ContinuousAttributeLite< T >::getValue  
(const stdair::Probability_T & iCumulativeProbability) const [inline]`

Get value from inverse cumulative distribution.

Definition at line 39 of file [ContinuousAttributeLite.hpp](#).

References [stdair::DictionaryManager::keyToValue\(\)](#), and [stdair::DictionaryManager::valueToKey\(\)](#).

**32.45.4.2** `template<typename T> const stdair::Probability_T stdair::ContinuousAttributeLite<  
T >::getRemainingProportion (const T & iValue) const [inline]`

Get remaining proportion from cumulative distribution.

Definition at line 84 of file [ContinuousAttributeLite.hpp](#).

References [stdair::DictionaryManager::keyToValue\(\)](#).

**32.45.4.3** `template<typename T> const double stdair::ContinuousAttributeLite< T  
>::getDerivativeValue (const T iKey) const [inline]`

Get the value of the derivative function in a key point.

Definition at line 131 of file [ContinuousAttributeLite.hpp](#).

References [stdair::DictionaryManager::keyToValue\(\)](#).

**32.45.4.4** `template<typename T> const T stdair::ContinuousAttributeLite< T  
>::getUpperBound (const T iKey) const [inline]`

Get the upper bound.

Definition at line 163 of file [ContinuousAttributeLite.hpp](#).

**32.45.4.5** `template<typename T> const std::string stdair::ContinuousAttributeLite< T  
>::displayCumulativeDistribution () const [inline]`

Display cumulative distribution.

Definition at line 182 of file [ContinuousAttributeLite.hpp](#).

References [stdair::DictionaryManager::keyToValue\(\)](#).

**32.45.4.6** `template<typename T> ContinuousAttributeLite& stdair::ContinuousAttributeLite<  
T >::operator= (const ContinuousAttributeLite< T > & iCAL) [inline]`

Copy operator.

Definition at line 221 of file [ContinuousAttributeLite.hpp](#).

The documentation for this struct was generated from the following file:

- [stdair/basic/ContinuousAttributeLite.hpp](#)

## 32.46 stdair::date\_time\_element< MIN, MAX > Struct Template Reference

```
#include <stdair/basic/BasParserHelperTypes.hpp>
```

### Public Member Functions

- [date\\_time\\_element](#) ()
- [date\\_time\\_element](#) (const [date\\_time\\_element](#) &t)
- [date\\_time\\_element](#) (int i)
- void [check](#) () const

### Public Attributes

- unsigned int [\\_value](#)

#### 32.46.1 Detailed Description

**template<int MIN = 0, int MAX = 0> struct stdair::date\_time\_element< MIN, MAX >**

Date & time element parser.

Definition at line 23 of file [BasParserHelperTypes.hpp](#).

#### 32.46.2 Constructor & Destructor Documentation

**32.46.2.1    template<int MIN = 0, int MAX = 0> stdair::date\_time\_element< MIN, MAX >::date\_time\_element ()    [inline]**

Default constructor.

Definition at line 28 of file [BasParserHelperTypes.hpp](#).

**32.46.2.2    template<int MIN = 0, int MAX = 0> stdair::date\_time\_element< MIN, MAX >::date\_time\_element (const date\_time\_element< MIN, MAX > & t)    [inline]**

Default copy constructor.

Definition at line 30 of file [BasParserHelperTypes.hpp](#).

**32.46.2.3    template<int MIN = 0, int MAX = 0> stdair::date\_time\_element< MIN, MAX >::date\_time\_element (int i)    [inline]**

Constructor.

Definition at line 32 of file [BasParserHelperTypes.hpp](#).

### 32.46.3 Member Function Documentation

**32.46.3.1** `template<int MIN = 0, int MAX = 0> void stdair::date_time_element< MIN, MAX >::check () const [inline]`

Checker.

Definition at line 34 of file [BasParserHelperTypes.hpp](#).

References [stdair::date\\_time\\_element< MIN, MAX >::\\_value](#).

### 32.46.4 Member Data Documentation

**32.46.4.1** `template<int MIN = 0, int MAX = 0> unsigned int stdair::date_time_element< MIN, MAX >::_value`

Definition at line 24 of file [BasParserHelperTypes.hpp](#).

Referenced by [stdair::date\\_time\\_element< MIN, MAX >::check\(\)](#), [stdair::operator\\*\(\)](#), and [stdair::operator+\(\)](#).

The documentation for this struct was generated from the following file:

#### 32.47.1 Detailed Description

Class representing the actual attributes for a fare date-period.

Definition at line 18 of file [DatePeriod.hpp](#).

#### 32.47.2 Member Typedef Documentation

##### 32.47.2.1 typedef DatePeriodKey stdair::DatePeriod::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 28 of file [DatePeriod.hpp](#).

#### 32.47.3 Constructor & Destructor Documentation

##### 32.47.3.1 stdair::DatePeriod::DatePeriod (const Key\_T & iKey) [protected]

Main constructor.

Definition at line 27 of file [DatePeriod.cpp](#).

##### 32.47.3.2 stdair::DatePeriod::~~DatePeriod () [protected, virtual]

Destructor.

Definition at line 32 of file [DatePeriod.cpp](#).

#### 32.47.4 Member Function Documentation

##### 32.47.4.1 void stdair::DatePeriod::toStream (std::ostream & ioOut) const [inline, virtual]

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 37 of file [DatePeriod.hpp](#).

References [toString\(\)](#).

**32.47.4.2 void stdair::DatePeriod::fromStream (std::istream & ioIn) [inline, virtual]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 46 of file [DatePeriod.hpp](#).

**32.47.4.3 std::string stdair::DatePeriod::toString () const [virtual]**

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 36 of file [DatePeriod.cpp](#).

References [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

**32.47.4.4 const std::string stdair::DatePeriod::describeKey () const [inline]**

Get a string describing the key.

Definition at line 57 of file [DatePeriod.hpp](#).

References [\\_key](#), and [stdair::DatePeriodKey::toString\(\)](#).

Referenced by [toString\(\)](#).

**32.47.4.5 const Key\_T& stdair::DatePeriod::getKey () const [inline]**

Get the primary key (date period).

Definition at line 66 of file [DatePeriod.hpp](#).

References [\\_key](#).

**32.47.4.6 BomAbstract\* const stdair::DatePeriod::getParent () const [inline]**

Get a reference on the parent object instance.

Definition at line 73 of file [DatePeriod.hpp](#).

References [\\_parent](#).

**32.47.4.7 const HolderMap\_T& stdair::DatePeriod::getHolderMap () const [inline]**

Get a reference on the children holder.

Definition at line 80 of file [DatePeriod.hpp](#).

References [\\_holderMap](#).

**32.47.4.8 const DatePeriod\_T& stdair::DatePeriod::getDatePeriod () const [inline]**

Get the date period.

Definition at line 87 of file [DatePeriod.hpp](#).

References [\\_key](#), and [stdair::DatePeriodKey::getDatePeriod\(\)](#).

Referenced by [isDepartureDateValid\(\)](#).

**32.47.4.9 bool stdair::DatePeriod::isDepartureDateValid (const Date\_T & iFlightDate) const**

Check if the given departure date is included in the departure period of the segment path.

Definition at line 44 of file [DatePeriod.cpp](#).

References [getDatePeriod\(\)](#).

Referenced by [stdair::BomRetriever::retrieveDatePeriodListFromKey\(\)](#).

**32.47.5 Friends And Related Function Documentation****32.47.5.1 friend class FacBom [friend]**

Definition at line 19 of file [DatePeriod.hpp](#).

**32.47.5.2 friend class FacCloneBom [friend]**

Definition at line 20 of file [DatePeriod.hpp](#).

**32.47.5.3 friend class FacBomManager [friend]**

Definition at line 21 of file [DatePeriod.hpp](#).

**32.47.6 Member Data Documentation****32.47.6.1 Key\_T stdair::DatePeriod::\_key [protected]**

Primary key (date period).

Definition at line 126 of file [DatePeriod.hpp](#).

Referenced by [describeKey\(\)](#), [getDatePeriod\(\)](#), and [getKey\(\)](#).

### 32.47.6.2 BomAbstract\* stdair::DatePeriod::\_parent [protected]

Pointer on the parent class.

Definition at line 131 of file [DatePeriod.hpp](#).

Referenced by [getParent\(\)](#).

### 32.47.6.3 HolderMap\_T stdair::DatePeriod::\_holderMap [protected]

Map holding the children.

Definition at line 136 of file [DatePeriod.hpp](#).

Referenced by [getHolderMap\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/bom/DatePeriod.hpp](#)
- [stdair/bom/DatePeriod.cpp](#)

## 32.48 stdair::DatePeriodKey Struct Reference

Key of date-period.

```
#include <stdair/bom/DatePeriodKey.hpp>
stdair::DatePeriodKey::
```

diagram for

### Public Member Functions

- [DatePeriodKey](#) (const [DatePeriod\\_T](#) &)

- void [toStream](#) (std::ostream &ioOut) const
- void [fromStream](#) (std::istream &ioIn)
- const std::string [toString](#) () const

### 32.48.1 Detailed Description

Key of date-period.

Definition at line 14 of file [DatePeriodKey.hpp](#).

## 32.48.2 Constructor & Destructor Documentation

### 32.48.2.1 stdair::DatePeriodKey::DatePeriodKey (const DatePeriod\_T & iDatePeriod)

Main Constructor.

Definition at line 22 of file [DatePeriodKey.cpp](#).

### 32.48.2.2 stdair::DatePeriodKey::DatePeriodKey (const DatePeriodKey & iKey)

Copy constructor.

Definition at line 27 of file [DatePeriodKey.cpp](#).

### 32.48.2.3 stdair::DatePeriodKey::~~DatePeriodKey ()

Destructor.

Definition at line 32 of file [DatePeriodKey.cpp](#).

## 32.48.3 Member Function Documentation

### 32.48.3.1 const DatePeriod\_T& stdair::DatePeriodKey::getDatePeriod () const [inline]

Get the date period.

Definition at line 32 of file [DatePeriodKey.hpp](#).

Referenced by [stdair::DatePeriod::getDatePeriod\(\)](#).

### 32.48.3.2 void stdair::DatePeriodKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 36 of file [DatePeriodKey.cpp](#).

References [toString\(\)](#).

### 32.48.3.3 void stdair::DatePeriodKey::fromStream (std::istream & ioIn) [virtual]

Read a Business Object Key from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 41 of file [DatePeriodKey.cpp](#).

**32.48.3.4 const std::string stdair::DatePeriodKey::toString () const [virtual]**

Get the serialised version of the Business Object Key. That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 45 of file [DatePeriodKey.cpp](#).

Referenced by [stdair::DatePeriod::describeKey\(\)](#), and [toStream\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/DatePeriodKey.hpp](#)
- [stdair/bom/DatePeriodKey.cpp](#)

## 32.50 stdair::DBManagerForAirlines Class Reference

#include <stdair/command/DBManagerForAirlines.hpp> Inheritance diagram for stdair::DBManagerForAirlines::

### Static Public Member Functions

- static void [updateAirlineInDB](#) (DBSession\_T &, const [AirlineStruct](#) &)
- static bool [retrieveAirline](#) (DBSession\_T &, const [AirlineCode\\_T](#) &, [AirlineStruct](#) &)
- static void [prepareSelectStatement](#) (DBSession\_T &, [DBRequestStatement\\_T](#) &, [AirlineStruct](#) &)
- static bool [iterateOnStatement](#) ([DBRequestStatement\\_T](#) &, [AirlineStruct](#) &)

### 32.50.1 Detailed Description

Class building the Business Object Model (BOM) from data retrieved from the database.

Definition at line 18 of file [DBManagerForAirlines.hpp](#).

### 32.50.2 Member Function Documentation

#### 32.50.2.1 void stdair::DBManagerForAirlines::updateAirlineInDB (DBSession\_T & ioSociSession, const AirlineStruct & iAirline) [static]

Update the fields of the database row corresponding to the given BOM object. DBSession\_T& AirlineStruct& .

Definition at line 99 of file DBManagerForAirlines.cpp.

References [stdair::AirlineStruct::getAirlineCode\(\)](#), and [stdair::AirlineStruct::getAirlineName\(\)](#).

#### 32.50.2.2 bool stdair::DBManagerForAirlines::retrieveAirline (DBSession\_T & ioSociSession, const AirlineCode\_T & iAirlineCode, AirlineStruct & ioAirline) [static]

Retrieve, from the (MySQL) database, the row corresponding to the given BOM code, and fill the given BOM object with that retrieved data. DBSession\_T& const AirlineCode\_T& AirlineStruct& .

Definition at line 134 of file DBManagerForAirlines.cpp.

References [iterateOnStatement\(\)](#).

#### 32.50.2.3 void stdair::DBManagerForAirlines::prepareSelectStatement (DBSession\_T & ioSociSession, DBRequestStatement\_T & ioSelectStatement, AirlineStruct & ioAirline) [static]

Prepare (parse and put in cache) the SQL statement. DBSession\_T& DBRequestStatement\_T& AirlineStruct& .

Definition at line 26 of file DBManagerForAirlines.cpp.

#### 32.50.2.4 bool stdair::DBManagerForAirlines::iterateOnStatement (DBRequestStatement\_T & ioStatement, AirlineStruct & ioAirline) [static]

Iterate on the SQL statement.

The SQL has to be already prepared. DBRequestStatement\_T& AirlineStruct& .

Definition at line 82 of file DBManagerForAirlines.cpp.

Referenced by [retrieveAirline\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/command/DBManagerForAirlines.hpp](#)
- [stdair/command/DBManagerForAirlines.cpp](#)

## 32.51 stdair::DBSessionManager Class Reference

```
#include <stdair/service/DBSessionManager.hpp>
```

### Public Member Functions

- [DBSession\\_T & getDBSession \(\)](#) const

### Static Public Member Functions

- static [DBSessionManager](#) & [instance](#) ()

### Friends

- class [FacSupervisor](#)
- class [STDAIR\\_Service](#)

### 32.51.1 Detailed Description

Class holding the database session.

Note that the database access is handled by the SOCI library.

Definition at line 17 of file [DBSessionManager.hpp](#).

### 32.51.2 Member Function Documentation

#### 32.51.2.1 DBSessionManager & stdair::DBSessionManager::instance () [static]

Return the static [DBSessionManager](#) instance.

Definition at line 82 of file [DBSessionManager.cpp](#).

#### 32.51.2.2 DBSession\_T & stdair::DBSessionManager::getDBSession () const

Retrieve the database session handler, held by the static instance of [DBSessionManager](#).

Definition at line 92 of file [DBSessionManager.cpp](#).

### 32.51.3 Friends And Related Function Documentation

#### 32.51.3.1 friend class FacSupervisor [friend]

Definition at line 19 of file [DBSessionManager.hpp](#).

#### 32.51.3.2 friend class STDAIR\_Service [friend]

Definition at line 20 of file [DBSessionManager.hpp](#).

The documentation for this class was generated from the following files:

- [stdair/service/DBSessionManager.hpp](#)
- [stdair/service/DBSessionManager.cpp](#)

## 32.52 stdair::DefaultDCPList Struct Reference

```
#include <stdair/basic/BasConst_Inventory.hpp>

#### 32.56.1 Detailed Description

Enumeration of demand (booking request) generation methods.

Definition at line 17 of file [DemandGenerationMethod.hpp](#).

## 32.56.2 Member Enumeration Documentation

### 32.56.2.1 enum stdair::DemandGenerationMethod::EN\_DemandGenerationMethod

Enumerator:

*POI\_PRO*

*STA\_ORD*

*LAST\_VALUE*

Definition at line 19 of file [DemandGenerationMethod.hpp](#).

## 32.56.3 Constructor & Destructor Documentation

### 32.56.3.1 stdair::DemandGenerationMethod::DemandGenerationMethod (const EN\_DemandGenerationMethod & *iDemandGenerationMethod*)

Main constructor.

Definition at line 34 of file [DemandGenerationMethod.cpp](#).

### 32.56.3.2 stdair::DemandGenerationMethod::DemandGenerationMethod (const char *iMethod*)

Alternative constructor.

Definition at line 62 of file [DemandGenerationMethod.cpp](#).

### 32.56.3.3 stdair::DemandGenerationMethod::DemandGenerationMethod (const std::string & *iMethod*)

Alternative constructor.

Definition at line 68 of file [DemandGenerationMethod.cpp](#).

References [getMethod\(\)](#).

### 32.56.3.4 stdair::DemandGenerationMethod::DemandGenerationMethod (const DemandGenerationMethod & *iDemandGenerationMethod*)

Default copy constructor.

Definition at line 28 of file [DemandGenerationMethod.cpp](#).

## 32.56.4 Member Function Documentation

### 32.56.4.1 const std::string & stdair::DemandGenerationMethod::getLabel (const EN\_DemandGenerationMethod & *iMethod*) [static]

Get the label as a string (e.g., "PoissonProcess" or "StatisticsOrder").

Definition at line 78 of file [DemandGenerationMethod.cpp](#).

**32.56.4.2 DemandGenerationMethod::EN\_DemandGenerationMethod****stdair::DemandGenerationMethod::getMethod (const char *iMethodChar*) [static]**

Get the method value from parsing a single char (e.g., 'P' or 'S').

Definition at line 40 of file [DemandGenerationMethod.cpp](#).References [describeLabels\(\)](#), [LAST\\_VALUE](#), [POI\\_PRO](#), and [STA\\_ORD](#).**32.56.4.3 char stdair::DemandGenerationMethod::getMethodLabel (const EN\_DemandGenerationMethod & *iMethod*) [static]**

Get the label as a single char (e.g., 'P' or 'S').

Definition at line 84 of file [DemandGenerationMethod.cpp](#).**32.56.4.4 std::string stdair::DemandGenerationMethod::getMethodLabelAsString (const EN\_DemandGenerationMethod & *iMethod*) [static]**

Get the label as a string of a single char (e.g., "P" or "S").

Definition at line 90 of file [DemandGenerationMethod.cpp](#).**32.56.4.5 std::string stdair::DemandGenerationMethod::describeLabels () [static]**

List the labels.

Definition at line 97 of file [DemandGenerationMethod.cpp](#).References [LAST\\_VALUE](#).Referenced by [getMethod\(\)](#).**32.56.4.6 DemandGenerationMethod::EN\_DemandGenerationMethod stdair::DemandGenerationMethod::getMethod () const**

Get the enumerated value.

Definition at line 110 of file [DemandGenerationMethod.cpp](#).Referenced by [DemandGenerationMethod\(\)](#).**32.56.4.7 char stdair::DemandGenerationMethod::getMethodAsChar () const**

Get the enumerated value as a short string (e.g., 'P' or 'S').

Definition at line 115 of file [DemandGenerationMethod.cpp](#).**32.56.4.8 std::string stdair::DemandGenerationMethod::getMethodAsString () const**

Get the enumerated value as a short string (e.g., "P" or "S").

Definition at line 121 of file [DemandGenerationMethod.cpp](#).

**32.56.4.9** `const std::string stdair::DemandGenerationMethod::describe () const` **[virtual]**

Give a description of the structure (e.g., "PoissonProcess" or "StatisticsOrder").

Implements [stdair::StructAbstract](#).

Definition at line 128 of file [DemandGenerationMethod.cpp](#).

**32.56.4.10** `bool stdair::DemandGenerationMethod::operator== (const EN_DemandGenerationMethod & iMethod) const`

Comparison operator.

Definition at line 136 of file [DemandGenerationMethod.cpp](#).

**32.56.4.11** `void stdair::StructAbstract::toStream (std::ostream & ioOut) const` **[inline, inherited]**

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 29 of file [StructAbstract.hpp](#).

References [stdair::StructAbstract::describe\(\)](#).

**32.56.4.12** `virtual void stdair::StructAbstract::fromStream (std::istream & ioIn)` **[inline, virtual, inherited]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented in [stdair::ProgressStatusSet](#), [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::EventStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 38 of file [StructAbstract.hpp](#).

Referenced by [operator>>\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/basic/DemandGenerationMethod.hpp](#)
- [stdair/basic/DemandGenerationMethod.cpp](#)

## 32.57 stdair::DictionaryManager Class Reference

Class wrapper of dictionary business methods.

```
#include <stdair/basic/DictionaryManager.hpp>
```

### Static Public Member Functions

- static const [stdair::Probability\\_T](#) [keyToValue](#) (const [DictionaryKey\\_T](#))
- static const [DictionaryKey\\_T](#) [valueToKey](#) (const [stdair::Probability\\_T](#))

### 32.57.1 Detailed Description

Class wrapper of dictionary business methods.

Definition at line 22 of file [DictionaryManager.hpp](#).

### 32.57.2 Member Function Documentation

#### 32.57.2.1 const stdair::Probability\_T stdair::DictionaryManager::keyToValue (const DictionaryKey\_T iKey) [static]

Convert from key to value.

Definition at line 12 of file [DictionaryManager.cpp](#).

References [stdair::DEFAULT\\_NUMBER\\_OF\\_SUBDIVISIONS](#).

Referenced by [stdair::ContinuousAttributeLite< T >::displayCumulativeDistribution\(\)](#), [stdair::ContinuousAttributeLite< T >::getDerivativeValue\(\)](#), [stdair::ContinuousAttributeLite< T >::getRemainingProportion\(\)](#), and [stdair::ContinuousAttributeLite< T >::getValue\(\)](#).

#### 32.57.2.2 const DictionaryKey\_T stdair::DictionaryManager::valueToKey (const stdair::Probability\_T iValue) [static]

Convert from value to key.

Definition at line 21 of file [DictionaryManager.cpp](#).

References [stdair::DEFAULT\\_NUMBER\\_OF\\_SUBDIVISIONS](#).

Referenced by [stdair::ContinuousAttributeLite< T >::getValue\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/basic/DictionaryManager.hpp](#)
- [stdair/basic/DictionaryManager.cpp](#)

## 32.58 stdair::DocumentNotFoundException Class Reference

stdair::DocumentNotFoundException::
```

diagram

for

### Public Member Functions

- [DocumentNotFoundException](#) (const std::string &iWhat)
- const char \* [what](#) () const throw ()

### Protected Attributes

- std::string [\\_what](#)

### 32.58.1 Detailed Description

Document not found.

Definition at line 104 of file [stdair\\_exceptions.hpp](#).

### 32.58.2 Constructor & Destructor Documentation

#### 32.58.2.1 stdair::DocumentNotFoundException::DocumentNotFoundException (const std::string &iWhat) [inline]

Constructor.

Definition at line 107 of file [stdair\\_exceptions.hpp](#).

### 32.58.3 Member Function Documentation

#### 32.58.3.1 const char\* stdair::RootException::what () const throw () [inline, inherited]

Give the details of the exception.

Definition at line 38 of file [stdair\\_exceptions.hpp](#).

References [stdair::RootException::\\_what](#).

Referenced by [stdair::ConfigHolderStruct::updateAirlineFeatures\(\)](#).

### 32.58.4 Member Data Documentation

#### 32.58.4.1 std::string stdair::RootException::\_what [protected, inherited]

Details for the exception.

Definition at line 46 of file [stdair\\_exceptions.hpp](#).

Referenced by [stdair::RootException::what\(\)](#).

The documentation for this class was generated from the following file:

- [stdair/stdair\\_exceptions.hpp](#)

## 32.59 stdair::DoWStruct Struct Reference

`#include <stdair/bom/DoWStruct.hpp>`Inheritance diagram for `stdair::DoWStruct`:

### Public Types

- `typedef std::vector< bool > BooleanList_T`

### Public Member Functions

- `bool getDayOfWeek (const unsigned short i) const`
- `bool getStandardDayOfWeek (const unsigned short i) const`
- `void setDayOfWeek (const unsigned short, const bool)`
- `const std::string describe () const`
- `const std::string describeShort () const`
- `DoWStruct shift (const long &) const`
- `DoWStruct intersection (const DoWStruct &) const`
- `const bool isValid () const`
- `DoWStruct (const std::string &iDowString)`
- `DoWStruct ()`
- `DoWStruct (const DoWStruct &)`
- `~DoWStruct ()`
- `void toStream (std::ostream &ioOut) const`
- `virtual void fromStream (std::istream &ioIn)`

### 32.59.1 Detailed Description

Define a Day Of the Week (DoW) sequence.

For instance, 1..11.1 means that the period is active on Mon., Thu., Fri. and Sun.

Definition at line 18 of file [DoWStruct.hpp](#).

### 32.59.2 Member Typedef Documentation

#### 32.59.2.1 `typedef std::vector<bool> stdair::DoWStruct::BooleanList_T`

Define the bit set representing the DoW.

Definition at line 21 of file [DoWStruct.hpp](#).

### 32.59.3 Constructor & Destructor Documentation

#### 32.59.3.1 `stdair::DoWStruct::DoWStruct (const std::string & iDowString)`

Constructor from a given bit set (e.g., "0000011" for the week-ends).

Definition at line 21 of file [DoWStruct.cpp](#).

#### 32.59.3.2 `stdair::DoWStruct::DoWStruct ()`

Default constructors.

Definition at line 14 of file [DoWStruct.cpp](#).

#### 32.59.3.3 `stdair::DoWStruct::DoWStruct (const DoWStruct & iDowStruct)`

Definition at line 34 of file [DoWStruct.cpp](#).

#### 32.59.3.4 `stdair::DoWStruct::~~DoWStruct () [inline]`

Default destructor.

Definition at line 63 of file [DoWStruct.hpp](#).

### 32.59.4 Member Function Documentation

#### 32.59.4.1 `bool stdair::DoWStruct::getDayOfWeek (const unsigned short i) const`

Get the i-th day of the week (Monday being the first one).

Definition at line 66 of file [DoWStruct.cpp](#).

Referenced by [intersection\(\)](#), and [isValid\(\)](#).

#### 32.59.4.2 `bool stdair::DoWStruct::getStandardDayOfWeek (const unsigned short i) const`

Get the i-th day of the week (Sunday being the first one).

Definition at line 71 of file [DoWStruct.cpp](#).

#### 32.59.4.3 `void stdair::DoWStruct::setDayOfWeek (const unsigned short i, const bool iBool)`

Set the new value for the i-th day-of-week.

Definition at line 82 of file [DoWStruct.cpp](#).

Referenced by [intersection\(\)](#), and [shift\(\)](#).

#### 32.59.4.4 const std::string stdair::DoWStruct::describe () const [virtual]

Display explicitly (e.g., "Mon.Tue.Wed.Thu.Fri.").

Implements [stdair::StructAbstract](#).

Definition at line 52 of file [DoWStruct.cpp](#).

References [stdair::DOW\\_STR](#).

Referenced by [stdair::PeriodStruct::describe\(\)](#).

#### 32.59.4.5 const std::string stdair::DoWStruct::describeShort () const

Display as a bit set (e.g., "1111100").

Definition at line 40 of file [DoWStruct.cpp](#).

Referenced by [stdair::PeriodStruct::describeShort\(\)](#).

#### 32.59.4.6 DoWStruct stdair::DoWStruct::shift (const long & iNbOfDays) const

Build a new DoW struct by shifting the current DoW by a given number.

Definition at line 88 of file [DoWStruct.cpp](#).

References [stdair::DEFAULT\\_DOW\\_STRING](#), and [setDayOfWeek\(\)](#).

Referenced by [stdair::PeriodStruct::addDateOffset\(\)](#).

#### 32.59.4.7 DoWStruct stdair::DoWStruct::intersection (const DoWStruct & iDoW) const

Build a new DoW struct by intersecting two DoW structs.

Definition at line 104 of file [DoWStruct.cpp](#).

References [stdair::DEFAULT\\_DOW\\_STRING](#), [getDayOfWeek\(\)](#), and [setDayOfWeek\(\)](#).

Referenced by [stdair::PeriodStruct::intersection\(\)](#).

#### 32.59.4.8 const bool stdair::DoWStruct::isValid () const

Return if the DoW struct is valid (i.e., has at least one "true").

Definition at line 117 of file [DoWStruct.cpp](#).

References [getDayOfWeek\(\)](#).

Referenced by [stdair::PeriodStruct::isValid\(\)](#).

#### 32.59.4.9 void stdair::StructAbstract::toStream (std::ostream & ioOut) const [inline, inherited]

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 29 of file [StructAbstract.hpp](#).

References [stdair::StructAbstract::describe\(\)](#).

### 32.59.4.10 virtual void stdair::StructAbstract::fromStream (std::istream & *ioIn*) [[inline](#), [virtual](#), [inherited](#)]

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented in [stdair::ProgressStatusSet](#), [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::EventStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 38 of file [StructAbstract.hpp](#).

Referenced by [operator>>\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/DoWStruct.hpp](#)
- [stdair/bom/DoWStruct.cpp](#)

- void [toStream](#) (std::ostream &ioOut) const

**32.61.1 Detailed Description**

Structure holding the details of an event.

**Note:**

No event should be scheduled before the date-time corresponding to the `DEFAULT_EVENT_OLDEST_DATETIME` constant (as of Feb. 2011, that date is set to Jan. 1, 2010). That constant is specified in the [stdair/basic/BasConst.cpp](#) file. In other words, the simulation should not specified to start before that date-time.

Definition at line 36 of file [EventStruct.hpp](#).

**32.61.2 Constructor & Destructor Documentation****32.61.2.1 stdair::EventStruct::EventStruct ()**

Default constructor.

Definition at line 26 of file [EventStruct.cpp](#).

**32.61.2.2 stdair::EventStruct::EventStruct (const EventType::EN\_EventType & *iEventType*, BookingRequestPtr\_T *ioRequestPtr*)**

Constructor for events corresponding to booking requests.

Definition at line 31 of file [EventStruct.cpp](#).

References [stdair::DEFAULT\\_EVENT\\_OLDEST\\_DATETIME](#).

**32.61.2.3 stdair::EventStruct::EventStruct (const EventType::EN\_EventType & *iEventType*, CancellationPtr\_T *ioCancellationPtr*)**

Constructor for events corresponding to cancellations.

Definition at line 55 of file [EventStruct.cpp](#).

References [stdair::DEFAULT\\_EVENT\\_OLDEST\\_DATETIME](#).

**32.61.2.4 stdair::EventStruct::EventStruct (const EventType::EN\_EventType & *iEventType*, const DateTime\_T & *iDCPDate*, OptimisationNotificationPtr\_T *ioOptimisationNotificationPtr*)**

Constructor for events corresponding to optimisation requests.

Definition at line 80 of file [EventStruct.cpp](#).

References [stdair::DEFAULT\\_EVENT\\_OLDEST\\_DATETIME](#).

**32.61.2.5 stdair::EventStruct::EventStruct (const EventType::EN\_EventType & *iEventType*, SnapshotPtr\_T *ioSnapshotPtr*)**

Constructor for events corresponding to snapshot requests.

Definition at line 105 of file [EventStruct.cpp](#).

References [stdair::DEFAULT\\_EVENT\\_OLDEST\\_DATETIME](#).

**32.61.2.6 stdair::EventStruct::EventStruct (const EventType::EN\_EventType & *iEventType*, RMEventPtr\_T *ioRMEventPtr*)**

Constructor for events corresponding to RM events.

Definition at line 130 of file [EventStruct.cpp](#).

References [stdair::DEFAULT\\_EVENT\\_OLDEST\\_DATETIME](#).

**32.61.2.7 stdair::EventStruct::EventStruct (const EventType::EN\_EventType & *iEventType*, BreakPointPtr\_T *ioBreakPointPtr*)**

Constructor for events corresponding to Break Point events.

Definition at line 155 of file [EventStruct.cpp](#).

References [stdair::DEFAULT\\_EVENT\\_OLDEST\\_DATETIME](#).

### 32.61.2.8 stdair::EventStruct::EventStruct (const EventStruct & iEventStruct)

Copy constructor.

Definition at line 180 of file [EventStruct.cpp](#).

### 32.61.2.9 stdair::EventStruct::~~EventStruct ()

Destructor.

Definition at line 243 of file [EventStruct.cpp](#).

## 32.61.3 Member Function Documentation

### 32.61.3.1 const EventType::EN\_EventType& stdair::EventStruct::getEventType () const [inline]

Get the event type

Definition at line 41 of file [EventStruct.hpp](#).

Referenced by [stdair::BomJSONExport::jsonExportBookingRequestObject\(\)](#), [stdair::BomJSONExport::jsonExportBreakPointObject\(\)](#), and [stdair::STDAIR\\_Service::jsonExportEventObject\(\)](#).

### 32.61.3.2 const LongDuration\_T& stdair::EventStruct::getEventTimeStamp () const [inline]

Get the event time stamp

Definition at line 46 of file [EventStruct.hpp](#).

### 32.61.3.3 const DateTime\_T & stdair::EventStruct::getEventTime () const

Get the event date-time i.e the stamp converted to a date-time format.

Definition at line 311 of file [EventStruct.cpp](#).

References [stdair::EventType::BKG\\_REQ](#), [stdair::EventType::BRK\\_PT](#), [stdair::EventType::CX](#), [stdair::DEFAULT\\_EVENT\\_OLDEST\\_DATETIME](#), [stdair::EventType::OPT\\_NOT\\_4\\_FD](#), [stdair::EventType::RM](#), and [stdair::EventType::SNAPSHOT](#).

### 32.61.3.4 const BookingRequestStruct& stdair::EventStruct::getBookingRequest () const [inline]

Get a reference on the booking request referred to by event.

#### Note:

When that event is not of type booking request ([EventType::BKG\\_REQ](#)), an assertion fails.

Definition at line 59 of file [EventStruct.hpp](#).

Referenced by [stdair::BomJSONExport::jsonExportBookingRequestObject\(\)](#).

**32.61.3.5 const CancellationStruct& stdair::EventStruct::getCancellation () const [inline]**

Get a reference on the cancellation referred to by event.

**Note:**

When that event is not of type cancellation ([EventType::CX](#)), an assertion fails.

Definition at line 70 of file [EventStruct.hpp](#).

**32.61.3.6 const OptimisationNotificationStruct& stdair::EventStruct::getOptimisationNotificationStruct () const [inline]**

Get a reference on the optimisation notification referred to by event.

**Note:**

When that event is not of type optimisation notification for optimisation notification ([EventType::OPT\\_NOT\\_4\\_FD](#)), an assertion fails.

Definition at line 83 of file [EventStruct.hpp](#).

**32.61.3.7 const SnapshotStruct& stdair::EventStruct::getSnapshotStruct () const [inline]**

Get a reference on the snapshot referred to by event.

**Note:**

When that event is not of type snapshot for snapshot ([EventType::OPT\\_NOT\\_4\\_FD](#)), an assertion fails.

Definition at line 95 of file [EventStruct.hpp](#).

**32.61.3.8 const RMEventStruct& stdair::EventStruct::getRMEvent () const [inline]**

Get a reference on the RM event referred to by the generic event.

**Note:**

When that event is not of type RM event for snapshot ([EventType::OPT\\_NOT\\_4\\_FD](#)), an assertion fails.

Definition at line 107 of file [EventStruct.hpp](#).

**32.61.3.9 const BreakPointStruct& stdair::EventStruct::getBreakPoint () const [inline]**

Get a reference on the break point referred to by event.

**Note:**

When that event is not of type booking break point ([EventType::BRK\\_PT](#)), an assertion fails.

Definition at line 118 of file [EventStruct.hpp](#).

Referenced by [stdair::BomJSONExport::jsonExportBreakPointObject\(\)](#).

**32.61.3.10 void stdair::EventStruct::fromStream (std::istream & *ioIn*) [virtual]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 247 of file [EventStruct.cpp](#).

**32.61.3.11 const std::string stdair::EventStruct::describe () const [virtual]**

Display of the structure.

Implements [stdair::StructAbstract](#).

Definition at line 251 of file [EventStruct.cpp](#).

References [stdair::EventType::BKG\\_REQ](#), [stdair::EventType::BRK\\_PT](#), [stdair::EventType::CX](#), [stdair::DEFAULT\\_EVENT\\_OLDEST\\_DATETIME](#), [stdair::EventType::getLabel\(\)](#), [stdair::EventType::OPT\\_NOT\\_4\\_FD](#), [stdair::EventType::RM](#), and [stdair::EventType::SNAPSHOT](#).

**32.61.3.12 void stdair::EventStruct::incrementEventTimeStamp ()**

Increment the date-time stamp which is counted in milliseconds.

This incrementation of one millisecond is needed when the insertion in the event queue failed, that is to say when an event with the exact same time stamp has already been inserted in the queue.

Definition at line 357 of file [EventStruct.cpp](#).

**32.61.3.13 void stdair::StructAbstract::toStream (std::ostream & *ioOut*) const [inline, inherited]**

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 29 of file [StructAbstract.hpp](#).

References [stdair::StructAbstract::describe\(\)](#).

#### 32.62.1 Detailed Description

Enumeration of event types.

Definition at line 15 of file `EventType.hpp`.

#### 32.62.2 Member Enumeration Documentation

##### 32.62.2.1 enum `stdair::EventType::EN_EventType`

**Enumerator:**

**BKG\_REQ**  
**CX**  
**OPT\_NOT\_4\_FD**  
**OPT\_NOT\_4\_NET**  
**SKD\_CHG**  
**SNAPSHOT**  
**RM**  
**BRK\_PT**  
**LAST\_VALUE**

Definition at line 17 of file [EventType.hpp](#).

**32.62.3 Constructor & Destructor Documentation****32.62.3.1 stdair::EventType::EventType (const EN\_EventType & *iEventType*)**

Constructor.

Definition at line 36 of file [EventType.cpp](#).

**32.62.3.2 stdair::EventType::EventType (const char *iType*)**

Constructor using a char.

Definition at line 41 of file [EventType.cpp](#).

References [BKG\\_REQ](#), [BRK\\_PT](#), [CX](#), [describeLabels\(\)](#), [LAST\\_VALUE](#), [OPT\\_NOT\\_4\\_FD](#), [OPT\\_NOT\\_4\\_NET](#), [RM](#), [SKD\\_CHG](#), and [SNAPSHOT](#).

**32.62.3.3 stdair::EventType::EventType (const std::string & *iTypeStr*)**

Constructor using a string.

Definition at line 64 of file [EventType.cpp](#).

References [describeLabels\(\)](#), and [LAST\\_VALUE](#).

**32.62.3.4 stdair::EventType::EventType (const EventType & *iEventType*)**

Default copy constructor.

Definition at line 31 of file [EventType.cpp](#).

**32.62.4 Member Function Documentation****32.62.4.1 const std::string & stdair::EventType::getLabel (const EN\_EventType & *iType*) [static]**

Get the label as a string (e.g., "BookingRequest", "Cancellation", "OptimisationNotificationForFlightDate", "OptimisationNotificationForNetwork", "ScheduleChange", "Snapshot", "RevenueManagement", "BreakPoint" or "BookingRequest").

Definition at line 83 of file [EventType.cpp](#).

Referenced by [stdair::EventStruct::describe\(\)](#), [stdair::BomJSONExport::jsonExportBookingRequestObject\(\)](#), and [stdair::BomJSONExport::jsonExportBreakPointObject\(\)](#).

#### 32.62.4.2 char stdair::EventType::getTypeLabel (const EN\_EventType & *iType*) [static]

Get the label as a single char (e.g., 'B', 'X', 'F', 'N', 'C', 'S', 'R' or 'P').

Definition at line 88 of file [EventType.cpp](#).

#### 32.62.4.3 std::string stdair::EventType::getTypeLabelAsString (const EN\_EventType & *iType*) [static]

Get the label as a string of a single char (e.g., "B", "X", "F", "N", "C", "S", "R" or "P").

Definition at line 93 of file [EventType.cpp](#).

#### 32.62.4.4 std::string stdair::EventType::describeLabels () [static]

List the labels.

Definition at line 100 of file [EventType.cpp](#).

References [LAST\\_VALUE](#).

Referenced by [EventType\(\)](#).

#### 32.62.4.5 EventType::EN\_EventType stdair::EventType::getType () const

Get the enumerated value.

Definition at line 112 of file [EventType.cpp](#).

#### 32.62.4.6 std::string stdair::EventType::getTypeAsString () const

Get the enumerated value as a short string (e.g., "B", "X", "F", "N", "C", "S", "R" or "P").

Definition at line 117 of file [EventType.cpp](#).

#### 32.62.4.7 const std::string stdair::EventType::describe () const [virtual]

Give a description of the structure (e.g., "BookingRequest", "Cancellation", "OptimisationNotificationForFlightDate", "OptimisationNotificationForNetwork", "ScheduleChange", "Snapshot", "RevenueManagement", "BreakPoint" or "BookingRequest").

Implements [stdair::StructAbstract](#).

Definition at line 124 of file [EventType.cpp](#).

#### 32.62.4.8 bool stdair::EventType::operator== (const EN\_EventType & *iType*) const

Comparison operator.

Definition at line 131 of file [EventType.cpp](#).

#### 32.62.4.9 void stdair::StructAbstract::toStream (std::ostream & *ioOut*) const [inline, inherited]

Dump a Business Object into an output stream.

##### Parameters:

*ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 29 of file [StructAbstract.hpp](#).

References [stdair::StructAbstract::describe\(\)](#).

#### 32.62.4.10 virtual void stdair::StructAbstract::fromStream (std::istream & *ioIn*) [inline, virtual, inherited]

Read a Business Object from an input stream.

##### Parameters:

*istream&* the input stream.

Reimplemented in [stdair::ProgressStatusSet](#), [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::EventStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 38 of file [StructAbstract.hpp](#).

Referenced by [operator>>\(\)](#).

#### 32.65.1 Detailed Description

Utility class for linking StdAir-based objects.

Definition at line 30 of file [FacBomManager.hpp](#).

#### 32.65.2 Constructor & Destructor Documentation

##### 32.65.2.1 stdair::FacBomManager::FacBomManager () [inline, protected]

Default Constructor.

This constructor is protected to comply with the singleton pattern.

Definition at line 225 of file [FacBomManager.hpp](#).

##### 32.65.2.2 stdair::FacBomManager::~~FacBomManager () [inline]

Destructor.

Definition at line 231 of file [FacBomManager.hpp](#).

### 32.65.3 Member Function Documentation

**32.65.3.1** `template<typename OBJECT2 , typename OBJECT1 > BomHolder< OBJECT2 > *  
stdair::FacBomManager::getBomHolderPtr (OBJECT1 & ioObject1) [inline,  
static]`

Retrieve a pointer on the holder of children (OBJECT2 type) for the parent (OBJECT1 type). If the holder does not exist, return NULL.

**Parameters:**

*typename* OBJECT1& Parent object.

**Returns:**

*typename* BomHolder<OBJECT2>\* [BomHolder](#) for the children objects.

Definition at line 268 of file [FacBomManager.hpp](#).

**32.65.3.2** `template<typename OBJECT2 , typename OBJECT1 > BomHolder< OBJECT2 >  
& stdair::FacBomManager::addBomHolder (OBJECT1 & ioObject1) [inline,  
static]`

Instantiate a BomHolder<OBJECT2> object, add it to the OBJECT1-typed object, given as parameter, and return a reference on that newly created [BomHolder](#).

**Parameters:**

*typename* OBJECT1& Parent object.

**Returns:**

*typename* BomHolder<OBJECT2>& Just created [BomHolder](#) (e.g., for the children objects).

Definition at line 238 of file [FacBomManager.hpp](#).

**32.65.3.3** `template<typename OBJECT1 , typename OBJECT2 > void  
stdair::FacBomManager::addToList (OBJECT1 & ioObject1, OBJECT2 & ioObject2)  
[inline, static]`

Add an OBJECT2-typed object (typically, a child) to the dedicated list held by the OBJECT1-typed object (typically, a parent).

**Note:**

The underlying list is actually stored within an object of type BomHolder<OBJECT2>.

**Parameters:**

*typename* OBJECT1& Parent object.

*typename* OBJECT2& Child object.

Definition at line 354 of file [FacBomManager.hpp](#).

**32.65.3.4** `template<typename OBJECT1 , typename OBJECT2 > void  
stdair::FacBomManager::addToMap (OBJECT1 & ioObject1, OBJECT2 & ioObject2,  
const MapKey_T & iKey) [inline, static]`

Add an OBJECT2-typed object (typically, a child) to the dedicated map held by the OBJECT1-typed object (typically, a parent).

**Note:**

The underlying map is actually stored within an object of type BomHolder<OBJECT2>.

**Parameters:**

*typename* OBJECT1& Parent object.

*typename* OBJECT2& Child object.

*const* MapKey\_T&

Definition at line 424 of file [FacBomManager.hpp](#).

Referenced by [addToMap\(\)](#).

**32.65.3.5** `template<typename OBJECT1 , typename OBJECT2 > void  
stdair::FacBomManager::addToMap (OBJECT1 & ioObject1, OBJECT2 & ioObject2)  
[inline, static]`

Add an OBJECT2-typed object (typically, a child) to the dedicated map held by the OBJECT1-typed object (typically, a parent).

**Note:**

The underlying map is actually stored within an object of type BomHolder<OBJECT2>.

**Parameters:**

*typename* OBJECT1& Parent object.

*typename* OBJECT2& Child object.

Definition at line 446 of file [FacBomManager.hpp](#).

References [addToMap\(\)](#).

**32.65.3.6** `template<typename OBJECT1 , typename OBJECT2 > void  
stdair::FacBomManager::addToListAndMap (OBJECT1 & ioObject1, OBJECT2 &  
ioObject2) [inline, static]`

Add an OBJECT2-typed object (typically, a child) to the dedicated containers (list and map) held by the OBJECT1-typed object (typically, a parent).

**Note:**

The underlying containers are actually stored within an object of type BomHolder<OBJECT2>.

**Parameters:**

*typename* OBJECT1& Parent object.

*typename* OBJECT2& Child object.

Definition at line 490 of file [FacBomManager.hpp](#).

**32.65.3.7** `template<typename OBJECT1 , typename OBJECT2 > void  
stdair::FacBomManager::addToListAndMap (OBJECT1 & ioObject1, OBJECT2 &  
ioObject2, const MapKey_T & iKey) [inline, static]`

Add an OBJECT2-typed object (typically, a child) to the dedicated containers (list and map) held by the OBJECT1-typed object (typically, a parent).

**Note:**

The underlying containers are actually stored within an object of type BomHolder<OBJECT2>.

**Parameters:**

*typename* OBJECT1& Parent object.

*typename* OBJECT2& Child object.

*const* MapKey\_T&

Definition at line 467 of file [FacBomManager.hpp](#).

**32.65.3.8** `template<typename PARENT , typename CHILD > void  
stdair::FacBomManager::linkWithParent (PARENT & ioParent, CHILD & ioChild)  
[inline, static]`

Allow the CHILD object to store a pointer on its PARENT object.

**Parameters:**

*typename* PARENT& Parent object.

*typename* CHILD& Child object.

Definition at line 511 of file [FacBomManager.hpp](#).

Referenced by [stdair::serialiseHelper\(\)](#).

**32.65.3.9** `template<typename OBJECT2 , typename OBJECT1 > void  
stdair::FacBomManager::cloneHolder (OBJECT1 & ioDest, const OBJECT1 & iOri)  
[inline, static]`

Clone the underlying containers (held by the BomHolder<OBJECT2>-typed holder) of the OBJECT1-typed object.

**Note:**

The underlying containers are actually stored within an object of type BomHolder<OBJECT2>.

**Parameters:**

*typename* OBJECT1& Parent object.

*typename* OBJECT2& Child object.

Definition at line 519 of file [FacBomManager.hpp](#).

References [stdair::BomHolder< BOM >::\\_bomList](#), and [stdair::BomHolder< BOM >::\\_bomMap](#).

### 32.65.3.10 void stdair::FacBomManager::resetYieldBasedNestingStructure (const SegmentCabin & iSegmentCabin) [static]

Reset the yield-based nesting structure of a segment-cabin. This method is used with FA or MRT.

Definition at line 20 of file [FacBomManager.cpp](#).

References [stdair::BomHolder< BOM >::\\_bomList](#), [stdair::NestingNode::describeKey\(\)](#), [stdair::NestingNode::getHolderMap\(\)](#), [stdair::NestingNode::setYield\(\)](#), and [stdair::YIELD\\_BASED\\_NESTING\\_STRUCTURE\\_CODE](#).

### 32.65.3.11 static void stdair::FacBomManager::setAirlineFeature (Inventory & iInventory, AirlineFeature & iAirlineFeature) [inline, static]

Set the airline feature object of an inventory.

Definition at line 205 of file [FacBomManager.hpp](#).

### 32.65.3.12 static void stdair::FacBomManager::linkWithOperating (SegmentDate & iSegmentDate, SegmentDate & iOperatingSegmentDate) [inline, static]

Link the segment date with its operating segment date.

Definition at line 213 of file [FacBomManager.hpp](#).

### 32.65.3.13 template<> void stdair::FacBomManager::addToList (SegmentDate & ioSegmentDate, SegmentDate & ioMarketingSegmentDate) [inline]

The documentation for this class was generated from the following files:

## 32.67 stdair::FacServiceAbstract Class Reference

`#include <stdair/service/FacServiceAbstract.hpp>`Inheritance diagram for stdair::FacServiceAbstract::

### Public Types

- `typedef std::vector< ServiceAbstract * > ServicePool\_T`

### Public Member Functions

- virtual `~FacServiceAbstract ()`
- void `clean ()`

### Protected Member Functions

- `FacServiceAbstract ()`

### Protected Attributes

- `ServicePool\_T _pool`

### 32.67.1 Detailed Description

Base class for the (Service) Factory layer.

Definition at line 16 of file [FacServiceAbstract.hpp](#).

### 32.67.2 Member Typedef Documentation

#### 32.67.2.1 `typedef std::vector<ServiceAbstract*> stdair::FacServiceAbstract::ServicePool_T`

Define the list (pool) of Service objects.

Definition at line 20 of file [FacServiceAbstract.hpp](#).

### 32.67.3 Constructor & Destructor Documentation

#### 32.67.3.1 `stdair::FacServiceAbstract::~~FacServiceAbstract () [virtual]`

Destructor.

Definition at line 13 of file [FacServiceAbstract.cpp](#).

References [clean\(\)](#).

#### 32.67.3.2 `stdair::FacServiceAbstract::FacServiceAbstract () [inline, protected]`

Default Constructor.

This constructor is protected to ensure the class is abstract.

Definition at line 31 of file [FacServiceAbstract.hpp](#).

### 32.67.4 Member Function Documentation

#### 32.67.4.1 `void stdair::FacServiceAbstract::clean ()`

Destroyed all the object instantiated by this factory.

Definition at line 18 of file [FacServiceAbstract.cpp](#).

References [\\_pool](#).

Referenced by [~FacServiceAbstract\(\)](#).

### 32.67.5 Member Data Documentation

#### 32.67.5.1 `ServicePool_T stdair::FacServiceAbstract::_pool [protected]`

List of instantiated Business Objects

Definition at line 34 of file [FacServiceAbstract.hpp](#).

Referenced by [clean\(\)](#), and [stdair::FacSTDAIRServiceContext::create\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/service/FacServiceAbstract.hpp](#)
- [stdair/service/FacServiceAbstract.cpp](#)

## 32.68 stdair::FacSTDAIRServiceContext Class Reference

Factory for [Bucket](#).

`#include <stdair/service/FacSTDAIRServiceContext.hpp>`Inheritance diagram for `stdair::FacSTDAIRServiceContext`:

### Public Types

- typedef `std::vector< ServiceAbstract * >` [ServicePool\\_T](#)

### Public Member Functions

- [~FacSTDAIRServiceContext](#) ()
- [STDAIR\\_ServiceContext](#) & [create](#) ()
- void [clean](#) ()

### Static Public Member Functions

- static [FacSTDAIRServiceContext](#) & [instance](#) ()

### Protected Member Functions

- [FacSTDAIRServiceContext](#) ()

### Protected Attributes

- [ServicePool\\_T](#) [\\_pool](#)

### 32.68.1 Detailed Description

Factory for [Bucket](#).

Definition at line 18 of file [FacSTDAIRServiceContext.hpp](#).

### 32.68.2 Member Typedef Documentation

#### 32.68.2.1 `typedef std::vector<ServiceAbstract*> stdair::FacServiceAbstract::ServicePool_T` [`inherited`]

Define the list (pool) of Service objects.

Definition at line 20 of file [FacServiceAbstract.hpp](#).

### 32.68.3 Constructor & Destructor Documentation

#### 32.68.3.1 `stdair::FacSTDAIRServiceContext::~~FacSTDAIRServiceContext ()`

Destructor.

The Destruction put the `_instance` to NULL in order to be clean for the next [FacSTDAIRServiceContext::instance\(\)](#).

Definition at line 16 of file [FacSTDAIRServiceContext.cpp](#).

#### 32.68.3.2 `stdair::FacSTDAIRServiceContext::FacSTDAIRServiceContext ()` [`inline`, `protected`]

Default Constructor.

This constructor is protected in order to ensure the singleton pattern.

Definition at line 54 of file [FacSTDAIRServiceContext.hpp](#).

Referenced by [instance\(\)](#).

### 32.68.4 Member Function Documentation

#### 32.68.4.1 `FacSTDAIRServiceContext & stdair::FacSTDAIRServiceContext::instance ()` [`static`]

Provide the unique instance.

The singleton is instantiated when first used.

##### Returns:

[FacSTDAIRServiceContext&](#)

Definition at line 21 of file [FacSTDAIRServiceContext.cpp](#).

References [FacSTDAIRServiceContext\(\)](#).

#### 32.68.4.2 `STDAIR_ServiceContext & stdair::FacSTDAIRServiceContext::create ()`

Create a new [STDAIR\\_ServiceContext](#) object.

This new object is added to the list of instantiated objects.

##### Returns:

[STDAIR\\_ServiceContext&](#) The newly created object.

Definition at line 33 of file [FacSTDAIRServiceContext.cpp](#).

References [stdair::FacServiceAbstract::\\_pool](#).

### 32.68.4.3 void stdair::FacServiceAbstract::clean () **[inherited]**

Destroyed all the object instantiated by this factory.

Definition at line 18 of file [FacServiceAbstract.cpp](#).

References [stdair::FacServiceAbstract::\\_pool](#).

Referenced by [stdair::FacServiceAbstract::~~FacServiceAbstract\(\)](#).

## 32.68.5 Member Data Documentation

### 32.68.5.1 ServicePool\_T stdair::FacServiceAbstract::\_pool **[protected, inherited]**

List of instantiated Business Objects

Definition at line 34 of file [FacServiceAbstract.hpp](#).

Referenced by [stdair::FacServiceAbstract::clean\(\)](#), and [create\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/service/FacSTDAIRServiceContext.hpp](#)
- [stdair/service/FacSTDAIRServiceContext.cpp](#)

## 32.69 stdair::FacSupervisor Class Reference

```
#include <stdair/service/FacSupervisor.hpp>
```

### Public Types

- typedef std::list< [FacAbstract \\*](#) > [PersistentBomFactoryPool\\_T](#)
- typedef std::list< [FacAbstract \\*](#) > [CloneBomFactoryPool\\_T](#)
- typedef std::list< [FacServiceAbstract \\*](#) > [ServiceFactoryPool\\_T](#)

### Public Member Functions

- void [registerPersistentBomFactory](#) ([FacAbstract \\*](#))
- void [registerCloneBomFactory](#) ([FacAbstract \\*](#))
- void [registerServiceFactory](#) ([FacServiceAbstract \\*](#))
- void [cleanPersistentBomLayer](#) ()
- void [cleanCloneBomLayer](#) ()
- void [cleanServiceLayer](#) ()
- [~FacSupervisor](#) ()

### Static Public Member Functions

- static [FacSupervisor](#) & [instance](#) ()
- static void [cleanLoggerService](#) ()
- static void [cleanDBSessionManager](#) ()
- static void [cleanAll](#) ()

### Protected Member Functions

- [FacSupervisor](#) ()
- [FacSupervisor](#) (const [FacSupervisor](#) &)

#### 32.69.1 Detailed Description

Singleton class to register and clean all Factories.

Definition at line 20 of file [FacSupervisor.hpp](#).

#### 32.69.2 Member Typedef Documentation

##### 32.69.2.1 `typedef std::list<FacAbstract*> stdair::FacSupervisor::PersistentBomFactoryPool_T`

Define the pool (list) of factories.

Definition at line 25 of file [FacSupervisor.hpp](#).

##### 32.69.2.2 `typedef std::list<FacAbstract*> stdair::FacSupervisor::CloneBomFactoryPool_T`

Definition at line 26 of file [FacSupervisor.hpp](#).

##### 32.69.2.3 `typedef std::list<FacServiceAbstract*> stdair::FacSupervisor::ServiceFactoryPool_T`

Definition at line 27 of file [FacSupervisor.hpp](#).

#### 32.69.3 Constructor & Destructor Documentation

##### 32.69.3.1 `stdair::FacSupervisor::~~FacSupervisor ()`

Destructor.

That destructors is applied on the static instance. It then deletes in turn all the other registered objects.

Definition at line 27 of file [FacSupervisor.cpp](#).

References [cleanCloneBomLayer\(\)](#), [cleanPersistentBomLayer\(\)](#), and [cleanServiceLayer\(\)](#).

### 32.69.3.2 stdair::FacSupervisor::FacSupervisor () [inline, protected]

Default Constructor.

This constructor is protected to ensure the singleton pattern.

Definition at line 120 of file [FacSupervisor.hpp](#).

Referenced by [instance\(\)](#).

### 32.69.3.3 stdair::FacSupervisor::FacSupervisor (const FacSupervisor &) [inline, protected]

Definition at line 121 of file [FacSupervisor.hpp](#).

## 32.69.4 Member Function Documentation

### 32.69.4.1 FacSupervisor & stdair::FacSupervisor::instance () [static]

Provide the unique (static) instance of the [FacSupervisor](#) object.

The singleton is instantiated when first used.

#### Returns:

[FacSupervisor&](#)

Definition at line 18 of file [FacSupervisor.cpp](#).

References [FacSupervisor\(\)](#).

Referenced by [stdair::STDAIR\\_Service::clonePersistentBom\(\)](#).

### 32.69.4.2 void stdair::FacSupervisor::registerPersistentBomFactory (FacAbstract \* ioFac\_ptr)

Register a newly instantiated persistent factory for the Bom layer.

When a concrete Factory is firstly instantiated this factory have to register itself to the [FacSupervisor](#)

#### Parameters:

**FacAbstract\*** The concrete Factory to register.

Definition at line 34 of file [FacSupervisor.cpp](#).

### 32.69.4.3 void stdair::FacSupervisor::registerCloneBomFactory (FacAbstract \* ioFac\_ptr)

Register a newly instantiated concrete factory for the Bom layer.

When a concrete Factory is firstly instantiated this factory have to register itself to the [FacSupervisor](#)

#### Parameters:

**FacAbstract\*** The concrete Factory to register.

Definition at line 39 of file [FacSupervisor.cpp](#).

**32.69.4.4 void stdair::FacSupervisor::registerServiceFactory (FacServiceAbstract \* ioFac\_ptr)**

Register a newly instantiated concrete factory for the Service layer.  
When a concrete Factory is firstly instantiated this factory have to register itself to the [FacSupervisor](#).

**Parameters:**

*FacServiceAbstract\** the concrete Factory to register.

Definition at line 44 of file [FacSupervisor.cpp](#).

**32.69.4.5 void stdair::FacSupervisor::cleanPersistentBomLayer ()**

Clean all the persistent registered object.  
Call the clean method of all the instantiated persistent factories for the BomStructure layer.

Definition at line 49 of file [FacSupervisor.cpp](#).

Referenced by [~FacSupervisor\(\)](#).

**32.69.4.6 void stdair::FacSupervisor::cleanCloneBomLayer ()**

Clean all the clone registered object.  
Call the clean method of all the instantiated factories for the BomStructure layer.

Definition at line 62 of file [FacSupervisor.cpp](#).

Referenced by [stdair::STDAIR\\_Service::clonePersistentBom\(\)](#), and [~FacSupervisor\(\)](#).

**32.69.4.7 void stdair::FacSupervisor::cleanServiceLayer ()**

Clean all Service created object.  
Call the clean method of all the instantiated factories for the Service layer.

Definition at line 76 of file [FacSupervisor.cpp](#).

Referenced by [~FacSupervisor\(\)](#).

**32.69.4.8 void stdair::FacSupervisor::cleanLoggerService () [static]**

Delete the static instance of the [Logger](#) object.  
Definition at line 90 of file [FacSupervisor.cpp](#).

Referenced by [cleanAll\(\)](#).

**32.69.4.9 void stdair::FacSupervisor::cleanDBSessionManager () [static]**

Delete the static instance of the [DBSessionManager](#) object.  
Definition at line 96 of file [FacSupervisor.cpp](#).

Referenced by [cleanAll\(\)](#).

**32.69.4.10 void stdair::FacSupervisor::cleanAll () [static]**

Clean the static instance. As the static instance (singleton) is deleted, all the other registered objects will be deleted in turn.

Definition at line 102 of file [FacSupervisor.cpp](#).

References [cleanDBSessionManager\(\)](#), and [cleanLoggerService\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/service/FacSupervisor.hpp](#)
- [stdair/service/FacSupervisor.cpp](#)

**32.70 stdair::FareFamily Class Reference**

Class representing the actual attributes for a family fare.

`#include <stdair/bom/FareFamily.hpp>`Inheritance diagram for stdair::FareFamily::

**Public Types**

- typedef [FareFamilyKey](#) Key\_T

**Public Member Functions**

- const Key\_T & [getKey](#) () const
- BomAbstract \*const [getParent](#) () const
- const FamilyCode\_T & [getFamilyCode](#) () const
- const HolderMap\_T & [getHolderMap](#) () const
- const FRAT5Curve\_T & [getFrat5Curve](#) () const

**Friends**

- class [FacBom](#)
- class [FacCloneBom](#)
- class [FacBomManager](#)
- class [boost::serialization::access](#)

**32.70.1 Detailed Description**

Class representing the actual attributes for a family fare.

Definition at line 28 of file [FareFamily.hpp](#).

**32.70.2 Member Typedef Documentation****32.70.2.1 typedef FareFamilyKey stdair::FareFamily::Key\_T**

Definition allowing to retrieve the associated BOM key type.

Definition at line 39 of file [FareFamily.hpp](#).

**32.70.3 Constructor & Destructor Documentation****32.70.3.1 stdair::FareFamily::FareFamily (const Key\_T & iKey) [protected]**

Constructor.

Definition at line 32 of file [FareFamily.cpp](#).

**32.70.3.2 stdair::FareFamily::~~FareFamily () [protected, virtual]**

Destructor.

Definition at line 36 of file [FareFamily.cpp](#).

### 32.70.4 Member Function Documentation

#### 32.70.4.1 const Key\_T& stdair::FareFamily::getKey () const [inline]

Get the family fare key.

Definition at line 45 of file [FareFamily.hpp](#).

References [\\_key](#).

#### 32.70.4.2 BomAbstract\* const stdair::FareFamily::getParent () const [inline]

Get the parent object.

Definition at line 50 of file [FareFamily.hpp](#).

References [\\_parent](#).

#### 32.70.4.3 const FamilyCode\_T& stdair::FareFamily::getFamilyCode () const [inline]

Get the family fare code (part of the primary key).

Definition at line 55 of file [FareFamily.hpp](#).

References [\\_key](#), and [stdair::FareFamilyKey::getFamilyCode\(\)](#).

#### 32.70.4.4 const HolderMap\_T& stdair::FareFamily::getHolderMap () const [inline]

Get the map of children holders.

Definition at line 60 of file [FareFamily.hpp](#).

References [\\_holderMap](#).

#### 32.70.4.5 const FRAT5Curve\_T& stdair::FareFamily::getFrat5Curve () const [inline]

Get the FRAT5 Curve.

Definition at line 65 of file [FareFamily.hpp](#).

References [\\_frat5Curve](#).

#### 32.70.4.6 const FFDisutilityCurve\_T& stdair::FareFamily::getDisutilityCurve () const [inline]

Get the Disutility Curve.

Definition at line 70 of file [FareFamily.hpp](#).

References [\\_disutilityCurve](#).

#### 32.70.4.7 const MeanValue\_T& stdair::FareFamily::getMean () const [inline]

Demand distribution.

Definition at line 75 of file [FareFamily.hpp](#).

References [\\_mean](#).

#### 32.70.4.8 const StdDevValue\_T& stdair::FareFamily::getStdDev () const [inline]

Definition at line 76 of file [FareFamily.hpp](#).

References [\\_stdDev](#).

#### 32.70.4.9 const MeanStdDevPairVector\_T& stdair::FareFamily::getMeanStdDev () const [inline]

Demand distribution.

Definition at line 79 of file [FareFamily.hpp](#).

References [\\_meanStdDev](#).

#### 32.70.4.10 void stdair::FareFamily::setFrat5Curve (const FRAT5Curve\_T & iFRAT5Curve) [inline]

FRAT5 Curve.

Definition at line 85 of file [FareFamily.hpp](#).

References [\\_frat5Curve](#).

#### 32.70.4.11 void stdair::FareFamily::setDisutilityCurve (const FFDisutilityCurve\_T & iDisutilityCurve) [inline]

Disutility Curve.

Definition at line 90 of file [FareFamily.hpp](#).

References [\\_disutilityCurve](#).

#### 32.70.4.12 void stdair::FareFamily::setMean (const MeanValue\_T & iMean) [inline]

Demand distribution.

Definition at line 95 of file [FareFamily.hpp](#).

References [\\_mean](#).

#### 32.70.4.13 void stdair::FareFamily::setStdDev (const StdDevValue\_T & iStdDev) [inline]

Definition at line 96 of file [FareFamily.hpp](#).

References [\\_stdDev](#).

**32.70.4.14 void stdair::FareFamily::setMeanStdDev (const MeanStdDevPairVector\_T & iMeanStdDev) [inline]**

Demand distribution.

Definition at line 99 of file [FareFamily.hpp](#).

References [\\_meanStdDev](#).

**32.70.4.15 void stdair::FareFamily::toStream (std::ostream & ioOut) const [inline, virtual]**

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 111 of file [FareFamily.hpp](#).

References [toString\(\)](#).

**32.70.4.16 void stdair::FareFamily::fromStream (std::istream & ioIn) [inline, virtual]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 120 of file [FareFamily.hpp](#).

**32.70.4.17 std::string stdair::FareFamily::toString () const [virtual]**

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 40 of file [FareFamily.cpp](#).

References [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

**32.70.4.18 const std::string stdair::FareFamily::describeKey () const [inline]**

Get a string describing the key.

Definition at line 131 of file [FareFamily.hpp](#).

References [\\_key](#), and [stdair::FareFamilyKey::toString\(\)](#).

Referenced by [toString\(\)](#).

**32.70.4.19** `template<class Archive > void stdair::FareFamily::serialize (Archive & ar, const unsigned int iFileVersion) [inline]`

Serialisation.

Definition at line 62 of file [FareFamily.cpp](#).

References [\\_key](#).

## 32.70.5 Friends And Related Function Documentation

**32.70.5.1** `friend class FacBom [friend]`

Definition at line 29 of file [FareFamily.hpp](#).

**32.70.5.2** `friend class FacCloneBom [friend]`

Definition at line 30 of file [FareFamily.hpp](#).

**32.70.5.3** `friend class FacBomManager [friend]`

Definition at line 31 of file [FareFamily.hpp](#).

**32.70.5.4** `friend class boost::serialization::access [friend]`

Definition at line 32 of file [FareFamily.hpp](#).

## 32.70.6 Member Data Documentation

**32.70.6.1** `Key_T stdair::FareFamily::_key`

Primary key (fare family code).

Definition at line 184 of file [FareFamily.hpp](#).

Referenced by [describeKey\(\)](#), [getFamilyCode\(\)](#), [getKey\(\)](#), and [serialize\(\)](#).

**32.70.6.2** `BomAbstract* stdair::FareFamily::_parent`

Pointer on the parent class ([SegmentCabin](#)).

Definition at line 189 of file [FareFamily.hpp](#).

Referenced by [getParent\(\)](#).

### 32.70.6.3 HolderMap\_T stdair::FareFamily::\_holderMap

Map holding the children ([BookingClass](#) objects).

Definition at line 194 of file [FareFamily.hpp](#).

Referenced by [getHolderMap\(\)](#).

### 32.70.6.4 FRAT5Curve\_T stdair::FareFamily::\_frat5Curve

The associated FRAT5 curve.

Definition at line 199 of file [FareFamily.hpp](#).

Referenced by [getFrat5Curve\(\)](#), and [setFrat5Curve\(\)](#).

### 32.70.6.5 FFDisutilityCurve\_T stdair::FareFamily::\_disutilityCurve

The associated disutility for the next higher fare family.

Definition at line 204 of file [FareFamily.hpp](#).

Referenced by [getDisutilityCurve\(\)](#), and [setDisutilityCurve\(\)](#).

### 32.70.6.6 MeanValue\_T stdair::FareFamily::\_mean

Demand distribution forecast.

Definition at line 207 of file [FareFamily.hpp](#).

Referenced by [getMean\(\)](#), and [setMean\(\)](#).

### 32.70.6.7 StdDevValue\_T stdair::FareFamily::\_stdDev

Definition at line 208 of file [FareFamily.hpp](#).

Referenced by [getStdDev\(\)](#), and [setStdDev\(\)](#).

### 32.70.6.8 MeanStdDevPairVector\_T stdair::FareFamily::\_meanStdDev

Achievable demand distribution forecast.

Definition at line 213 of file [FareFamily.hpp](#).

Referenced by [getMeanStdDev\(\)](#), and [setMeanStdDev\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/bom/FareFamily.hpp](#)
- [stdair/bom/FareFamily.cpp](#)

## 32.71 stdair::FareFamilyKey Struct Reference

Key of a given fare family, made of a fare family code.

```
#include <stdair/bom/FareFamilyKey.hpp>
stdair::FareFamilyKey::
```

diagram

for

### Public Member Functions

- [FareFamilyKey](#) (const [FamilyCode\\_T](#) &iFamilyCode)

void [serialize](#) (Archive &ar, const unsigned int iFileVersion)

### Friends

- class [boost::serialization::access](#)

#### 32.71.1 Detailed Description

Key of a given fare family, made of a fare family code.

Definition at line 26 of file [FareFamilyKey.hpp](#).

#### 32.71.2 Constructor & Destructor Documentation

##### 32.71.2.1 stdair::FareFamilyKey::FareFamilyKey (const FamilyCode\_T & iFamilyCode)

Constructor.

Definition at line 28 of file [FareFamilyKey.cpp](#).

##### 32.71.2.2 stdair::FareFamilyKey::FareFamilyKey (const FareFamilyKey & iFareFamilyKey)

Copy constructor.

Definition at line 23 of file [FareFamilyKey.cpp](#).

##### 32.71.2.3 stdair::FareFamilyKey::~~FareFamilyKey ()

Destructor.

Definition at line 33 of file [FareFamilyKey.cpp](#).

### 32.71.3 Member Function Documentation

#### 32.71.3.1 const FamilyCode\_T& stdair::FareFamilyKey::getFamilyCode () const [inline]

Get the family code.

Definition at line 56 of file [FareFamilyKey.hpp](#).

Referenced by [stdair::FareFamily::getFamilyCode\(\)](#).

#### 32.71.3.2 void stdair::FareFamilyKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

##### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 37 of file [FareFamilyKey.cpp](#).

References [toString\(\)](#).

#### 32.71.3.3 void stdair::FareFamilyKey::fromStream (std::istream & ioIn) [virtual]

Read a Business Object Key from an input stream.

##### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 42 of file [FareFamilyKey.cpp](#).

#### 32.71.3.4 const std::string stdair::FareFamilyKey::toString () const [virtual]

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-date.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 46 of file [FareFamilyKey.cpp](#).

Referenced by [stdair::FareFamily::describeKey\(\)](#), and [toStream\(\)](#).

#### 32.71.3.5 template<class Archive > void stdair::FareFamilyKey::serialize (Archive & ar, const unsigned int iFileVersion) [inline]

Serialisation.

Definition at line 68 of file [FareFamilyKey.cpp](#).

### 32.71.4 Friends And Related Function Documentation

#### 32.71.4.1 friend class boost::serialization::access [friend]

Definition at line 27 of file [FareFamilyKey.hpp](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/FareFamilyKey.hpp](#)
- [stdair/bom/FareFamilyKey.cpp](#)

## 32.72 stdair::FareFeatures Class Reference

Class representing the actual attributes for a fare date-period.

`#include <stdair/bom/FareFeatures.hpp>` Inheritance diagram for stdair::FareFeatures::

### Public Types

- typedef [FareFeaturesKey](#) [Key\\_T](#)

#### 32.72.1 Detailed Description

Class representing the actual attributes for a fare date-period.

Definition at line 18 of file [FareFeatures.hpp](#).

#### 32.72.2 Member Typedef Documentation

##### 32.72.2.1 typedef FareFeaturesKey stdair::FareFeatures::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 28 of file [FareFeatures.hpp](#).

#### 32.72.3 Constructor & Destructor Documentation

##### 32.72.3.1 stdair::FareFeatures::FareFeatures (const Key\_T & iKey) [protected]

Main constructor.

Definition at line 33 of file [FareFeatures.cpp](#).

##### 32.72.3.2 stdair::FareFeatures::~~FareFeatures () [protected, virtual]

Destructor.

Definition at line 38 of file [FareFeatures.cpp](#).

#### 32.72.4 Member Function Documentation

##### 32.72.4.1 void stdair::FareFeatures::toStream (std::ostream & ioOut) const [inline, virtual]

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 37 of file [FareFeatures.hpp](#).

References [toString\(\)](#).

**32.72.4.2 void stdair::FareFeatures::fromStream (std::istream & ioIn) [inline, virtual]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 46 of file [FareFeatures.hpp](#).

**32.72.4.3 std::string stdair::FareFeatures::toString () const [virtual]**

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 42 of file [FareFeatures.cpp](#).

References [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

**32.72.4.4 const std::string stdair::FareFeatures::describeKey () const [inline]**

Get a string describing the key.

Definition at line 57 of file [FareFeatures.hpp](#).

References [\\_key](#), and [stdair::FareFeaturesKey::toString\(\)](#).

Referenced by [toString\(\)](#).

**32.72.4.5 const Key\_T& stdair::FareFeatures::getKey () const [inline]**

Get the primary key (trip type, advance purchase,... ,cabin code).

Definition at line 67 of file [FareFeatures.hpp](#).

References [\\_key](#).

**32.72.4.6 BomAbstract\* const stdair::FareFeatures::getParent () const [inline]**

Get a reference on the parent object instance.

Definition at line 74 of file [FareFeatures.hpp](#).

References [\\_parent](#).

**32.72.4.7 const HolderMap\_T& stdair::FareFeatures::getHolderMap () const [inline]**

Get a reference on the children holder.

Definition at line 81 of file [FareFeatures.hpp](#).

References [\\_holderMap](#).

**32.72.4.8 const TripType\_T& stdair::FareFeatures::getTripType () const [inline]**

Get the trip type.

Definition at line 88 of file [FareFeatures.hpp](#).

References [\\_key](#), and [stdair::FareFeaturesKey::getTripType\(\)](#).

Referenced by [isTripTypeValid\(\)](#).

**32.72.4.9 const DayDuration\_T& stdair::FareFeatures::getAdvancePurchase () const [inline]**

Get the fare day duration.

Definition at line 95 of file [FareFeatures.hpp](#).

References [\\_key](#), and [stdair::FareFeaturesKey::getAdvancePurchase\(\)](#).

Referenced by [isAdvancePurchaseValid\(\)](#).

**32.72.4.10 const SaturdayStay\_T& stdair::FareFeatures::getSaturdayStay () const [inline]**

Get the fare saturday stay option.

Definition at line 102 of file [FareFeatures.hpp](#).

References [\\_key](#), and [stdair::FareFeaturesKey::getSaturdayStay\(\)](#).

**32.72.4.11 const ChangeFees\_T& stdair::FareFeatures::getChangeFees () const [inline]**

Get the change fees criterion.

Definition at line 109 of file [FareFeatures.hpp](#).

References [\\_key](#), and [stdair::FareFeaturesKey::getChangeFees\(\)](#).

**32.72.4.12 const NonRefundable\_T& stdair::FareFeatures::getRefundableOption () const [inline]**

Get the refundable option.

Definition at line 116 of file [FareFeatures.hpp](#).

References [\\_key](#), and [stdair::FareFeaturesKey::getRefundableOption\(\)](#).

**32.72.4.13 const DayDuration\_T& stdair::FareFeatures::getMinimumStay () const [inline]**

Get the minimum stay.

Definition at line 123 of file [FareFeatures.hpp](#).

References [\\_key](#), and [stdair::FareFeaturesKey::getMinimumStay\(\)](#).

Referenced by [isStayDurationValid\(\)](#).

#### 32.72.4.14 bool stdair::FareFeatures::isTripTypeValid (const TripType\_T & iBookingRequestTripType) const

Check whether the fare rule trip type corresponds to the booking request trip type.

Definition at line 50 of file [FareFeatures.cpp](#).

References [getTripType\(\)](#), [stdair::TRIP\\_TYPE\\_INBOUND](#), [stdair::TRIP\\_TYPE\\_OUTBOUND](#), and [stdair::TRIP\\_TYPE\\_ROUND\\_TRIP](#).

#### 32.72.4.15 bool stdair::FareFeatures::isStayDurationValid (const DayDuration\_T & iStayDuration) const

Check whether a given stay duration is greater or equal to the minimum stay of the fare rule.

Definition at line 75 of file [FareFeatures.cpp](#).

References [getMinimumStay\(\)](#).

#### 32.72.4.16 bool stdair::FareFeatures::isAdvancePurchaseValid (const DateTime\_T & iBookingRequestDateTime, const DateTime\_T & iFlightDateTime) const

Check whether a booking request date is valid compared the required advance purchase number of days of the fare rule.

Definition at line 88 of file [FareFeatures.cpp](#).

References [getAdvancePurchase\(\)](#).

### 32.72.5 Friends And Related Function Documentation

#### 32.72.5.1 friend class FacBom [friend]

Definition at line 19 of file [FareFeatures.hpp](#).

#### 32.72.5.2 friend class FacCloneBom [friend]

Definition at line 20 of file [FareFeatures.hpp](#).

#### 32.72.5.3 friend class FacBomManager [friend]

Definition at line 21 of file [FareFeatures.hpp](#).

### 32.72.6 Member Data Documentation

#### 32.72.6.1 Key\_T stdair::FareFeatures::\_key [protected]

Primary key (flight number and departure date).

Definition at line 176 of file [FareFeatures.hpp](#).

Referenced by [describeKey\(\)](#), [getAdvancePurchase\(\)](#), [getChangeFees\(\)](#), [getKey\(\)](#), [getMinimumStay\(\)](#), [getRefundableOption\(\)](#), [getSaturdayStay\(\)](#), and [getTripType\(\)](#).

#### 32.72.6.2 BomAbstract\* stdair::FareFeatures::\_parent [protected]

Pointer on the parent class.

Definition at line 181 of file [FareFeatures.hpp](#).

Referenced by [getParent\(\)](#).

#### 32.72.6.3 HolderMap\_T stdair::FareFeatures::\_holderMap [protected]

Map holding the children.

Definition at line 186 of file [FareFeatures.hpp](#).

Referenced by [getHolderMap\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/bom/FareFeatures.hpp](#)
- [stdair/bom/FareFeatures.cpp](#)

## 32.73 stdair::FareFeaturesKey Struct Reference

Key of date-period.

```
#include <stdair/bom/FareFeaturesKey.hpp>
stdair::FareFeaturesKey::
```

### 32.73.1 Detailed Description

Key of date-period.

Definition at line 18 of file [FareFeaturesKey.hpp](#).

### 32.73.2 Constructor & Destructor Documentation

**32.73.2.1** `stdair::FareFeaturesKey::FareFeaturesKey (const TripType_T & iTripType, const DayDuration_T & iAdvancePurchase, const SaturdayStay_T & iSaturdayStay, const ChangeFees_T & iChangeFees, const NonRefundable_T & iNonRefundable, const DayDuration_T & iMinimumStay)`

Main constructor.

Definition at line 26 of file [FareFeaturesKey.cpp](#).

**32.73.2.2** `stdair::FareFeaturesKey::FareFeaturesKey (const FareFeaturesKey & iKey)`

Copy constructor.

Definition at line 38 of file [FareFeaturesKey.cpp](#).

**32.73.2.3** `stdair::FareFeaturesKey::~~FareFeaturesKey ()`

Destructor.

Definition at line 48 of file [FareFeaturesKey.cpp](#).

### 32.73.3 Member Function Documentation

**32.73.3.1** `const TripType_T& stdair::FareFeaturesKey::getTripType () const` **[inline]**

Get the fare trip type.

Definition at line 39 of file [FareFeaturesKey.hpp](#).

Referenced by [stdair::FareFeatures::getTripType\(\)](#).

**32.73.3.2** `const DayDuration_T& stdair::FareFeaturesKey::getAdvancePurchase () const` **[inline]**

Get the fare day duration.

Definition at line 46 of file [FareFeaturesKey.hpp](#).

Referenced by [stdair::FareFeatures::getAdvancePurchase\(\)](#).

### 32.73.3.3 const SaturdayStay\_T& stdair::FareFeaturesKey::getSaturdayStay () const [inline]

Get the fare saturday stay option.

Definition at line 53 of file [FareFeaturesKey.hpp](#).

Referenced by [stdair::FareFeatures::getSaturdayStay\(\)](#).

### 32.73.3.4 const ChangeFees\_T& stdair::FareFeaturesKey::getChangeFees () const [inline]

Get the change fees criterion.

Definition at line 60 of file [FareFeaturesKey.hpp](#).

Referenced by [stdair::FareFeatures::getChangeFees\(\)](#).

### 32.73.3.5 const NonRefundable\_T& stdair::FareFeaturesKey::getRefundableOption () const [inline]

Get the refundable option.

Definition at line 67 of file [FareFeaturesKey.hpp](#).

Referenced by [stdair::FareFeatures::getRefundableOption\(\)](#).

### 32.73.3.6 const DayDuration\_T& stdair::FareFeaturesKey::getMinimumStay () const [inline]

Get the minimum stay.

Definition at line 74 of file [FareFeaturesKey.hpp](#).

Referenced by [stdair::FareFeatures::getMinimumStay\(\)](#).

### 32.73.3.7 void stdair::FareFeaturesKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 52 of file [FareFeaturesKey.cpp](#).

References [toString\(\)](#).

### 32.73.3.8 void stdair::FareFeaturesKey::fromStream (std::istream & ioIn) [virtual]

Read a Business Object Key from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 57 of file [FareFeaturesKey.cpp](#).

### 32.73.3.9 const std::string stdair::FareFeaturesKey::toString () const [virtual]

Get the serialised version of the Business Object Key. That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 61 of file [FareFeaturesKey.cpp](#).

Referenced by [stdair::FareFeatures::describeKey\(\)](#), and [toStream\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/FareFeaturesKey.hpp](#)
- [stdair/bom/FareFeaturesKey.cpp](#)

## 32.74 stdair::FareOptionStruct Struct Reference

Structure holding the elements of a fare option.

### 32.74.1 Detailed Description

Structure holding the elements of a fare option.

Definition at line 20 of file [FareOptionStruct.hpp](#).

### 32.74.2 Constructor & Destructor Documentation

#### 32.74.2.1 stdair::FareOptionStruct::FareOptionStruct ()

Default constructor.

Definition at line 14 of file [FareOptionStruct.cpp](#).

#### 32.74.2.2 stdair::FareOptionStruct::FareOptionStruct (const std::string &iClassPath, const [Fare\\_T](#) & iFare, const [ChangeFees\\_T](#) & iChangeFee, const [NonRefundable\\_T](#) & iNonRefundable, const [SaturdayStay\\_T](#) & iSaturdayNightStay)

Main constructor.

Definition at line 26 of file [FareOptionStruct.cpp](#).

#### 32.74.2.3 stdair::FareOptionStruct::FareOptionStruct (const [FareOptionStruct](#) & iFO)

Copy constructor.

Definition at line 19 of file [FareOptionStruct.cpp](#).

#### 32.74.2.4 stdair::FareOptionStruct::~~FareOptionStruct ()

Destructor.

Definition at line 38 of file [FareOptionStruct.cpp](#).

### 32.74.3 Member Function Documentation

#### 32.74.3.1 const [ClassList\\_StringList\\_T](#)& stdair::FareOptionStruct::getClassPath () const [inline]

Get the class-path.

Definition at line 24 of file [FareOptionStruct.hpp](#).

**32.74.3.2 const Fare\_T& stdair::FareOptionStruct::getFare () const [inline]**

Get the fare value.

Definition at line 29 of file [FareOptionStruct.hpp](#).

**32.74.3.3 const Availability\_T& stdair::FareOptionStruct::getAvailability () const [inline]**

Get the availability.

Definition at line 34 of file [FareOptionStruct.hpp](#).

**32.74.3.4 const ChangeFees\_T stdair::FareOptionStruct::getChangeFees () const [inline]**

Get the change fees.

Definition at line 39 of file [FareOptionStruct.hpp](#).

**32.74.3.5 const NonRefundable\_T stdair::FareOptionStruct::getNonRefundable () const [inline]**

State whether the ticket is refundable.

Definition at line 44 of file [FareOptionStruct.hpp](#).

**32.74.3.6 const SaturdayStay\_T stdair::FareOptionStruct::getSaturdayStay () const [inline]**

State whether there is a condition on the saturday night stay.

Definition at line 49 of file [FareOptionStruct.hpp](#).

**32.74.3.7 void stdair::FareOptionStruct::addClassList (const std::string *iClassCodeList*)**

Set the class-path.

Definition at line 93 of file [FareOptionStruct.cpp](#).

**32.74.3.8 void stdair::FareOptionStruct::emptyClassList ()**

Empty the class-path.

Definition at line 98 of file [FareOptionStruct.cpp](#).

**32.74.3.9 void stdair::FareOptionStruct::setFare (const Fare\_T & *iFare*) [inline]**

Set the fare value.

Definition at line 63 of file [FareOptionStruct.hpp](#).

**32.74.3.10** void stdair::FareOptionStruct::setAvailability (const Availability\_T & iAvl) [inline]

Set the availability.

Definition at line 68 of file [FareOptionStruct.hpp](#).

**32.74.3.11** void stdair::FareOptionStruct::setChangeFees (const ChangeFees\_T iRes) [inline]

Set the change fees.

Definition at line 73 of file [FareOptionStruct.hpp](#).

**32.74.3.12** void stdair::FareOptionStruct::setNonRefundable (const NonRefundable\_T iRes) [inline]

Set the flag for the ticket refundability.

Definition at line 78 of file [FareOptionStruct.hpp](#).

**32.74.3.13** void stdair::FareOptionStruct::setSaturdayStay (const SaturdayStay\_T iRes) [inline]

Set the flag for the saturday night stay condition.

Definition at line 83 of file [FareOptionStruct.hpp](#).

**32.74.3.14** void stdair::FareOptionStruct::toStream (std::ostream & ioOut) const

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 42 of file [FareOptionStruct.cpp](#).

References [describe\(\)](#).

**32.74.3.15** void stdair::FareOptionStruct::fromStream (std::istream & ioIn) [virtual]

Read a Business Object from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 47 of file [FareOptionStruct.cpp](#).

**32.74.3.16** `const std::string stdair::FareOptionStruct::describe () const` `[virtual]`

Display of the structure.

Implements [stdair::StructAbstract](#).Definition at line 51 of file [FareOptionStruct.cpp](#).Referenced by [stdair::TravelSolutionStruct::describe\(\)](#), and [toStream\(\)](#).**32.74.3.17** `const std::string stdair::FareOptionStruct::display () const`

Display of the structure.

Definition at line 73 of file [FareOptionStruct.cpp](#).Referenced by [stdair::TravelSolutionStruct::display\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/FareOptionStruct.hpp](#)
- [stdair/bom/FareOptionStruct.cpp](#)

**32.75** **stdair::FFDisutilityCurveHolderStruct Struct Reference**

`#include <stdair/bom/FFDisutilityCurveHolderStruct.hpp>` Inheritance diagram for `stdair::FFDisutilityCurveHolderStruct`:

**Public Member Functions**

- `FFDisutilityCurveHolderStruct ()`
- `FFDisutilityCurveHolderStruct (const FFDisutilityCurveHolderStruct &)`
- `~FFDisutilityCurveHolderStruct ()`

**32.75.1 Detailed Description**

Structure holding the elements of a snapshot .

Definition at line 19 of file [FFDisutilityCurveHolderStruct.hpp](#).

### 32.75.2 Constructor & Destructor Documentation

#### 32.75.2.1 stdair::FFDisutilityCurveHolderStruct::FFDisutilityCurveHolderStruct ()

Constructor.

Definition at line 14 of file [FFDisutilityCurveHolderStruct.cpp](#).

#### 32.75.2.2 stdair::FFDisutilityCurveHolderStruct::FFDisutilityCurveHolderStruct (const FFDisutilityCurveHolderStruct & iHolder)

Copy constructor.

Definition at line 19 of file [FFDisutilityCurveHolderStruct.cpp](#).

#### 32.75.2.3 stdair::FFDisutilityCurveHolderStruct::~~FFDisutilityCurveHolderStruct ()

Destructor.

Definition at line 24 of file [FFDisutilityCurveHolderStruct.cpp](#).

### 32.75.3 Member Function Documentation

#### 32.75.3.1 const FFDisutilityCurve\_T & stdair::FFDisutilityCurveHolderStruct::getFFDisutilityCurve (const std::string & iKey) const

Get the FFDisutility curve corresponding to the given key.

Definition at line 29 of file [FFDisutilityCurveHolderStruct.cpp](#).

References [STDAIR\\_LOG\\_DEBUG](#).

Referenced by [stdair::BomRoot::getFFDisutilityCurve\(\)](#).

#### 32.75.3.2 void stdair::FFDisutilityCurveHolderStruct::addCurve (const std::string & iKey, const FFDisutilityCurve\_T & iCurve)

Add a new curve to the holder.

Definition at line 42 of file [FFDisutilityCurveHolderStruct.cpp](#).

References [STDAIR\\_LOG\\_DEBUG](#).

Referenced by [stdair::BomRoot::addFFDisutilityCurve\(\)](#).

#### 32.75.3.3 void stdair::FFDisutilityCurveHolderStruct::toStream (std::ostream & ioOut) const

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 53 of file [FFDisutilityCurveHolderStruct.cpp](#).

References [describe\(\)](#).

**32.75.3.4** void stdair::FFDisutilityCurveHolderStruct::fromStream (std::istream & *ioIn*)  
[virtual]

Read a Business Object from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 58 of file [FFDisutilityCurveHolderStruct.cpp](#).

**32.75.3.5** const std::string stdair::FFDisutilityCurveHolderStruct::describe () const [virtual]

Display of the structure.

Implements [stdair::StructAbstract](#).

Definition at line 62 of file [FFDisutilityCurveHolderStruct.cpp](#).

Referenced by [toStream\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/FFDisutilityCurveHolderStruct.hpp](#)

### 32.78.1 Detailed Description

Class representing the actual attributes for an airline flight-date.

Definition at line 35 of file [FlightDate.hpp](#).

### 32.78.2 Member Typedef Documentation

#### 32.78.2.1 typedef FlightDateKey stdair::FlightDate::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 46 of file [FlightDate.hpp](#).

### 32.78.3 Constructor & Destructor Documentation

#### 32.78.3.1 stdair::FlightDate::FlightDate (const Key\_T & iKey) [protected]

Main constructor.

Definition at line 29 of file [FlightDate.cpp](#).

#### 32.78.3.2 stdair::FlightDate::~~FlightDate () [protected, virtual]

Destructor.

Definition at line 33 of file [FlightDate.cpp](#).

### 32.78.4 Member Function Documentation

#### 32.78.4.1 const Key\_T& stdair::FlightDate::getKey () const [inline]

Get the flight-date key.

Definition at line 52 of file [FlightDate.hpp](#).

References [\\_key](#).

#### 32.78.4.2 BomAbstract\* const stdair::FlightDate::getParent () const [inline]

Get the parent object.

Definition at line 57 of file [FlightDate.hpp](#).

References [\\_parent](#).

Referenced by [getAirlineCode\(\)](#).

#### 32.78.4.3 const FlightNumber\_T& stdair::FlightDate::getFlightNumber () const [inline]

Get the flight number (part of the primary key).

Definition at line 62 of file [FlightDate.hpp](#).

References [\\_key](#), and [stdair::FlightDateKey::getFlightNumber\(\)](#).

Referenced by [stdair::BomJSONExport::jsonExportFlightDateList\(\)](#), and [stdair::BomJSONExport::jsonExportFlightDateObjects\(\)](#).

#### 32.78.4.4 const Date\_T& stdair::FlightDate::getDepartureDate () const [inline]

Get the flight date (part of the primary key).

Definition at line 67 of file [FlightDate.hpp](#).

References [\\_key](#), and [stdair::FlightDateKey::getDepartureDate\(\)](#).

Referenced by [stdair::LegDate::describeRoutingKey\(\)](#), [stdair::BomJSONExport::jsonExportFlightDateList\(\)](#), and [stdair::BomJSONExport::jsonExportFlightDateObjects\(\)](#).

#### 32.78.4.5 const AirlineCode\_T & stdair::FlightDate::getAirlineCode () const

Get the airline code (key of the parent object).

##### Note:

That method assumes that the parent object derives from the [Inventory](#) class, as it needs to have access to the [getAirlineCode\(\)](#) method.

Definition at line 37 of file [FlightDate.cpp](#).

References [stdair::Inventory::getAirlineCode\(\)](#), and [getParent\(\)](#).

Referenced by [stdair::LegDate::getAirlineCode\(\)](#), and [stdair::BomJSONExport::jsonExportFlightDateObjects\(\)](#).

#### 32.78.4.6 const HolderMap\_T& stdair::FlightDate::getHolderMap () const [inline]

Get the map of children holders.

Definition at line 83 of file [FlightDate.hpp](#).

References [\\_holderMap](#).

#### 32.78.4.7 LegDate \* stdair::FlightDate::getLegDate (const std::string & iLegDateKeyStr) const

Get a pointer on the [LegDate](#) object corresponding to the given key.

##### Note:

The [LegDate](#) object can be inherited from, if needed. In that case, a `dynamic_cast<>` may be needed.

##### Parameters:

**const** std::string& The leg-date key.

##### Returns:

LegDate\* Found [LegDate](#) object. NULL if not found.

Definition at line 52 of file [FlightDate.cpp](#).

Referenced by [getLegDate\(\)](#), [stdair::BomRetriever::retrieveDummyLegCabin\(\)](#), and [stdair::BomRetriever::retrieveOperatingLegDateFromLongKey\(\)](#).

**32.78.4.8 LegDate \* stdair::FlightDate::getLegDate (const LegDateKey & iLegDateKey) const**

Get a pointer on the [LegDate](#) object corresponding to the given key.

**Note:**

The [LegDate](#) object can be inherited from, if needed. In that case, a `dynamic_cast<>` may be needed.

**Parameters:**

*const* [LegDateKey](#)& The leg-date key

**Returns:**

LegDate\* Found [LegDate](#) object. NULL if not found.

Definition at line 59 of file [FlightDate.cpp](#).

References [getLegDate\(\)](#), and [stdair::LegDateKey::toString\(\)](#).

**32.78.4.9 SegmentDate \* stdair::FlightDate::getSegmentDate (const std::string & iSegmentDateKeyStr) const**

Get a pointer on the [SegmentDate](#) object corresponding to the given key.

**Note:**

The [SegmentDate](#) object can be inherited from, if needed. In that case, a `dynamic_cast<>` may be needed.

**Parameters:**

*const* std::string& The segment-date key.

**Returns:**

SegmentDate\* Found [SegmentDate](#) object. NULL if not found.

Definition at line 65 of file [FlightDate.cpp](#).

Referenced by [getSegmentDate\(\)](#), [stdair::BomRetriever::retrieveDummySegmentCabin\(\)](#), [stdair::BomRetriever::retrieveSegmentDateFromKey\(\)](#), and [stdair::BomRetriever::retrieveSegmentDateFromLongKey\(\)](#).

**32.78.4.10 SegmentDate \* stdair::FlightDate::getSegmentDate (const SegmentDateKey & iSegmentDateKey) const**

Get a pointer on the [SegmentDate](#) object corresponding to the given key.

**Note:**

The [SegmentDate](#) object can be inherited from, if needed. In that case, a `dynamic_cast<>` may be needed.

**Parameters:**

*const* [SegmentDateKey](#)& The segment-date key

**Returns:**

SegmentDate\* Found [SegmentDate](#) object. NULL if not found.

Definition at line 73 of file [FlightDate.cpp](#).

References [getSegmentDate\(\)](#), and [stdair::SegmentDateKey::toString\(\)](#).

**32.78.4.11 void stdair::FlightDate::toStream (std::ostream & ioOut) const [inline, virtual]**

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 142 of file [FlightDate.hpp](#).

References [toString\(\)](#).

**32.78.4.12 void stdair::FlightDate::fromStream (std::istream & ioIn) [inline, virtual]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 151 of file [FlightDate.hpp](#).

**32.78.4.13 std::string stdair::FlightDate::toString () const [virtual]**

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 45 of file [FlightDate.cpp](#).

References [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

**32.78.4.14 const std::string stdair::FlightDate::describeKey () const [inline]**

Get a string describing the key.

Definition at line 162 of file [FlightDate.hpp](#).

References [\\_key](#), and [stdair::FlightDateKey::toString\(\)](#).

Referenced by [toString\(\)](#).

**32.78.4.15** `template<class Archive > void stdair::FlightDate::serialize (Archive & ar, const unsigned int iFileVersion) [inline]`

Serialisation.

Definition at line 187 of file [CmdBomSerialiser.cpp](#).

References [\\_key](#).

## 32.78.5 Friends And Related Function Documentation

**32.78.5.1** `friend class FacBom [friend]`

Definition at line 36 of file [FlightDate.hpp](#).

**32.78.5.2** `friend class FacCloneBom [friend]`

Definition at line 37 of file [FlightDate.hpp](#).

**32.78.5.3** `friend class FacBomManager [friend]`

Definition at line 38 of file [FlightDate.hpp](#).

**32.78.5.4** `friend class boost::serialization::access [friend]`

Definition at line 39 of file [FlightDate.hpp](#).

## 32.78.6 Member Data Documentation

**32.78.6.1** `Key_T stdair::FlightDate::_key [protected]`

Primary key (flight number and departure date).

Definition at line 216 of file [FlightDate.hpp](#).

Referenced by [describeKey\(\)](#), [getDepartureDate\(\)](#), [getFlightNumber\(\)](#), [getKey\(\)](#), and [serialize\(\)](#).

**32.78.6.2** `BomAbstract* stdair::FlightDate::_parent [protected]`

Pointer on the parent class ([Inventory](#)).

Definition at line 221 of file [FlightDate.hpp](#).

Referenced by [getParent\(\)](#).

### 32.78.6.3 HolderMap\_T stdair::FlightDate::\_holderMap [protected]

Map holding the children ([SegmentDate](#) and [LegDate](#) objects).

Definition at line 226 of file [FlightDate.hpp](#).

Referenced by [getHolderMap\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/bom/FlightDate.hpp](#)
- [stdair/bom/FlightDate.cpp](#)
- [stdair/command/CmdBomSerialiser.cpp](#)

## 32.79 stdair::FlightDateKey Struct Reference

Key of a given flight-date, made of a flight number and a departure date.

`#include <stdair/bom/FlightDateKey.hpp>`  
 Inheritance diagram for stdair::FlightDateKey:

### Public Member Functions

- [FlightDateKey](#) (const [FlightNumber\\_T](#) &, const [Date\\_T](#) &)

### Friends

- class [boost::serialization::access](#)

### 32.79.1 Detailed Description

Key of a given flight-date, made of a flight number and a departure date.

Definition at line 28 of file [FlightDateKey.hpp](#).

### 32.79.2 Constructor & Destructor Documentation

#### 32.79.2.1 stdair::FlightDateKey::FlightDateKey (const FlightNumber\_T & *iFlightNumber*, const Date\_T & *iFlightDate*)

Constructor.

Definition at line 28 of file [FlightDateKey.cpp](#).

#### 32.79.2.2 stdair::FlightDateKey::FlightDateKey (const FlightDateKey & *iKey*)

Copy constructor.

Definition at line 34 of file [FlightDateKey.cpp](#).

#### 32.79.2.3 stdair::FlightDateKey::~FlightDateKey ()

Destructor.

Definition at line 39 of file [FlightDateKey.cpp](#).

### 32.79.3 Member Function Documentation

#### 32.79.3.1 const FlightNumber\_T& stdair::FlightDateKey::getFlightNumber () const [inline]

Get the flight number.

Definition at line 58 of file [FlightDateKey.hpp](#).

Referenced by [stdair::FlightDate::getFlightNumber\(\)](#).

#### 32.79.3.2 const Date\_T& stdair::FlightDateKey::getDepartureDate () const [inline]

Get the departure date of the (first leg of the) flight.

Definition at line 63 of file [FlightDateKey.hpp](#).

Referenced by [stdair::OnDDateKey::getDate\(\)](#), and [stdair::FlightDate::getDepartureDate\(\)](#).

#### 32.79.3.3 void stdair::FlightDateKey::toStream (std::ostream & *ioOut*) const [virtual]

Dump a Business Object Key into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 43 of file [FlightDateKey.cpp](#).

References [toString\(\)](#).

**32.79.3.4 void stdair::FlightDateKey::fromStream (std::istream & *ioIn*) [virtual]**

Read a Business Object Key from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 48 of file [FlightDateKey.cpp](#).

**32.79.3.5 const std::string stdair::FlightDateKey::toString () const [virtual]**

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-date.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 52 of file [FlightDateKey.cpp](#).

References [stdair::DEFAULT\\_KEY\\_SUB\\_FLD\\_DELIMITER](#).

Referenced by [stdair::FlightDate::describeKey\(\)](#), [stdair::Inventory::getFlightDate\(\)](#), [stdair::BomRetriever::retrieveSegmentDateFromLongKey\(\)](#), and [toStream\(\)](#).

**32.79.3.6 template<class Archive > void stdair::FlightDateKey::serialize (Archive & *ar*, const unsigned int *iFileVersion*) [inline]**

Serialisation.

Definition at line 77 of file [FlightDateKey.cpp](#).

**32.79.4 Friends And Related Function Documentation****32.79.4.1 friend class boost::serialization::access [friend]**

Definition at line 29 of file [FlightDateKey.hpp](#).

Definition at line 16 of file [FlightPeriodKey.cpp](#).

#### 32.81.2.3 stdair::FlightPeriodKey::~~FlightPeriodKey ()

Destructor.

Definition at line 21 of file [FlightPeriodKey.cpp](#).

### 32.81.3 Member Function Documentation

#### 32.81.3.1 const FlightNumber\_T& stdair::FlightPeriodKey::getFlightNumber () const [inline]

Get the flight number.

Definition at line 28 of file [FlightPeriodKey.hpp](#).

Referenced by [stdair::FlightPeriod::getFlightNumber\(\)](#).

### 32.81.3.2 const PeriodStruct& stdair::FlightPeriodKey::getPeriod () const [inline]

Get the active days-of-week.

Definition at line 33 of file [FlightPeriodKey.hpp](#).

Referenced by [stdair::FlightPeriod::getPeriod\(\)](#).

### 32.81.3.3 void stdair::FlightPeriodKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 25 of file [FlightPeriodKey.cpp](#).

References [toString\(\)](#).

### 32.81.3.4 void stdair::FlightPeriodKey::fromStream (std::istream & ioIn) [virtual]

Read a Business Object Key from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 30 of file [FlightPeriodKey.cpp](#).

### 32.81.3.5 const std::string stdair::FlightPeriodKey::toString () const [virtual]

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-period.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 34 of file [FlightPeriodKey.cpp](#).

### 32.83.1 Detailed Description

Enumeration of forecasting methods.

Definition at line 15 of file [ForecastingMethod.hpp](#).

### 32.83.2 Member Enumeration Documentation

#### 32.83.2.1 enum stdair::ForecastingMethod::EN\_ForecastingMethod

Enumerator:

*[Q\\_FORECASTING](#)*  
*[HYBRID\\_FORECASTING](#)*  
*[OLD\\_QFF](#)*  
*[NEW\\_QFF](#)*

***BASED\_FORECASTING***

***LAST\_VALUE***

Definition at line 17 of file [ForecastingMethod.hpp](#).

### 32.83.3 Constructor & Destructor Documentation

#### 32.83.3.1 stdair::ForecastingMethod::ForecastingMethod (const EN\_ForecastingMethod & *iForecastingMethod*)

Constructor.

Definition at line 37 of file [ForecastingMethod.cpp](#).

#### 32.83.3.2 stdair::ForecastingMethod::ForecastingMethod (const char *iMethod*)

Constructor.

Definition at line 42 of file [ForecastingMethod.cpp](#).

References [BASED\\_FORECASTING](#), [describeLabels\(\)](#), [HYBRID\\_FORECASTING](#), [LAST\\_VALUE](#), [NEW\\_QFF](#), [OLD\\_QFF](#), and [Q\\_FORECASTING](#).

#### 32.83.3.3 stdair::ForecastingMethod::ForecastingMethod (const ForecastingMethod & *iForecastingMethod*)

Default copy constructor.

Definition at line 31 of file [ForecastingMethod.cpp](#).

### 32.83.4 Member Function Documentation

#### 32.83.4.1 const std::string & stdair::ForecastingMethod::getLabel (const EN\_ForecastingMethod & *iMethod*) [static]

Get the label as a string (e.g., "Q Forecasting", "Hybrid Forecasting", "Old QFF" or "New QFF").

Definition at line 63 of file [ForecastingMethod.cpp](#).

#### 32.83.4.2 char stdair::ForecastingMethod::getMethodLabel (const EN\_ForecastingMethod & *iMethod*) [static]

Get the label as a single char (e.g., 'Q', 'H', 'O', 'N' or 'B').

Definition at line 68 of file [ForecastingMethod.cpp](#).

#### 32.83.4.3 std::string stdair::ForecastingMethod::getMethodLabelAsString (const EN\_ForecastingMethod & *iMethod*) [static]

Get the label as a string of a single char (e.g., "Q", "H", "O", "N" or "B").

Definition at line 74 of file [ForecastingMethod.cpp](#).

**32.83.4.4 std::string stdair::ForecastingMethod::describeLabels () [static]**

List the labels.

Definition at line 81 of file [ForecastingMethod.cpp](#).References [LAST\\_VALUE](#).Referenced by [ForecastingMethod\(\)](#).**32.83.4.5 ForecastingMethod::EN\_ForecastingMethod stdair::ForecastingMethod::getMethod () const**

Get the enumerated value.

Definition at line 93 of file [ForecastingMethod.cpp](#).Referenced by [stdair::AirlineFeature::getForecastingMethod\(\)](#).**32.83.4.6 std::string stdair::ForecastingMethod::getMethodAsString () const**

Get the enumerated value as a short string (e.g., "Q", "H", "O", "N" or "B").

Definition at line 98 of file [ForecastingMethod.cpp](#).**32.83.4.7 const std::string stdair::ForecastingMethod::describe () const [virtual]**

Give a description of the structure (e.g., "Q Forecasting", "Hybrid Forecasting", "Old QFF", "New QFF" or "Based Forecasting").

Implements [stdair::StructAbstract](#).Definition at line 105 of file [ForecastingMethod.cpp](#).**32.83.4.8 bool stdair::ForecastingMethod::operator== (const EN\_ForecastingMethod & iMethod) const**

Comparison operator.

Definition at line 113 of file [ForecastingMethod.cpp](#).**32.83.4.9 void stdair::StructAbstract::toStream (std::ostream & ioOut) const [inline, inherited]**

Dump a Business Object into an output stream.

**Parameters:***ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 29 of file [StructAbstract.hpp](#).

References [stdair::StructAbstract::describe\(\)](#).

#### 32.83.4.10 virtual void stdair::StructAbstract::fromStream (std::istream & *ioIn*) [inline, virtual, inherited]

Read a Business Object from an input stream.

##### Parameters:

*istream&* the input stream.

Reimplemented in [stdair::ProgressStatusSet](#), [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::EventStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 38 of file [StructAbstract.hpp](#).

Referenced by [operator>>\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/basic/ForecastingMethod.hpp](#)
- [stdair/basic/ForecastingMethod.cpp](#)

## 32.84 stdair::FRAT5CurveHolderStruct Struct Reference

`#include <stdair/bom/FRAT5CurveHolderStruct.hpp>` Inheritance diagram for `stdair::FRAT5CurveHolderStruct`:

### Public Member Functions

- const [FRAT5Curve\\_T](#) & [getFRAT5Curve](#) (const std::string &) const
- void [addCurve](#) (const std::string &, const [FRAT5Curve\\_T](#) &)

- const std::string [describe](#) () const
- [FRAT5CurveHolderStruct](#) ()
- [FRAT5CurveHolderStruct](#) (const [FRAT5CurveHolderStruct](#) &)
- [~FRAT5CurveHolderStruct](#) ()

### 32.84.1 Detailed Description

Structure holding the elements of a snapshot .

Definition at line 19 of file [FRAT5CurveHolderStruct.hpp](#).

### 32.84.2 Constructor & Destructor Documentation

#### 32.84.2.1 stdair::FRAT5CurveHolderStruct::FRAT5CurveHolderStruct ()

Constructor.

Definition at line 14 of file [FRAT5CurveHolderStruct.cpp](#).

#### 32.84.2.2 stdair::FRAT5CurveHolderStruct::FRAT5CurveHolderStruct (const FRAT5CurveHolderStruct & iHolder)

Copy constructor.

Definition at line 19 of file [FRAT5CurveHolderStruct.cpp](#).

#### 32.84.2.3 stdair::FRAT5CurveHolderStruct::~~FRAT5CurveHolderStruct ()

Destructor.

Definition at line 24 of file [FRAT5CurveHolderStruct.cpp](#).

### 32.84.3 Member Function Documentation

#### 32.84.3.1 const FRAT5Curve\_T & stdair::FRAT5CurveHolderStruct::getFRAT5Curve (const std::string & iKey) const

Get the FRAT5 curve corresponding to the given key.

Definition at line 29 of file [FRAT5CurveHolderStruct.cpp](#).

References [STDAIR\\_LOG\\_DEBUG](#).

Referenced by [stdair::BomRoot::getFRAT5Curve\(\)](#).

#### 32.84.3.2 void stdair::FRAT5CurveHolderStruct::addCurve (const std::string & iKey, const FRAT5Curve\_T & iCurve)

Add a new curve to the holder.

Definition at line 42 of file [FRAT5CurveHolderStruct.cpp](#).

References [STDAIR\\_LOG\\_DEBUG](#).

Referenced by [stdair::BomRoot::addFRAT5Curve\(\)](#).

#### 32.84.3.3 void stdair::FRAT5CurveHolderStruct::toStream (std::ostream & ioOut) const

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 53 of file [FRAT5CurveHolderStruct.cpp](#).

References [describe\(\)](#).

### 32.84.3.4 void stdair::FRAT5CurveHolderStruct::fromStream (std::istream & ioIn) [virtual]

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 58 of file [FRAT5CurveHolderStruct.cpp](#).

### 32.84.3.5 const std::string stdair::FRAT5CurveHolderStruct::describe () const [virtual]

Display of the structure.

Implements [stdair::StructAbstract](#).

Definition at line 62 of file [FRAT5CurveHolderStruct.cpp](#).

Referenced by [toStream\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/FRAT5CurveHolderStruct.hpp](#)
- [stdair/bom/FRAT5CurveHolderStruct.cpp](#)

## 32.85 stdair::FRAT5FilePath Class Reference

`#include <stdair/stdair_file.hpp>`Inheritance diagram for stdair::FRAT5FilePath::

**Public Member Functions**

- [FRAT5FilePath](#) (const [Filename\\_T](#) &iFilename)
- const char \* [name](#) () const

### Protected Attributes

- const [Filename\\_T \\_filename](#)

### 32.85.1 Detailed Description

FRAT5 input file.

Definition at line 88 of file [stdair\\_file.hpp](#).

### 32.85.2 Constructor & Destructor Documentation

**32.85.2.1** `stdair::FRAT5FilePath::FRAT5FilePath (const Filename_T & iFilename)` `[inline, explicit]`

Constructor.

Definition at line 93 of file [stdair\\_file.hpp](#).

### 32.85.3 Member Function Documentation

**32.85.3.1** `const char* stdair::RootFilePath::name () const` `[inline, inherited]`

Give the details of the exception.

Definition at line 42 of file [stdair\\_file.hpp](#).

References [stdair::RootFilePath::\\_filename](#).

Referenced by [stdair::BomINIImport::importINIConfig\(\)](#).

### 32.85.4 Member Data Documentation

**32.85.4.1** `const Filename_T stdair::RootFilePath::_filename` `[protected, inherited]`

Name of the file.

Definition at line 50 of file [stdair\\_file.hpp](#).

Referenced by [stdair::RootFilePath::name\(\)](#).

The documentation for this class was generated from the following file:

- [stdair/stdair\\_file.hpp](#)

## 32.86 stdair::InputFilePath Class Reference

`#include <stdair/stdair_file.hpp>`Inheritance diagram for `stdair::InputFilePath`:

### 32.87.1 Detailed Description

Class representing the actual attributes for an airline inventory.

Definition at line 34 of file [Inventory.hpp](#).

### 32.87.2 Member Typedef Documentation

#### 32.87.2.1 typedef InventoryKey stdair::Inventory::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 45 of file [Inventory.hpp](#).

### 32.87.3 Constructor & Destructor Documentation

#### 32.87.3.1 stdair::Inventory::Inventory (const Key\_T & iKey) [protected]

Constructor.

Definition at line 31 of file [Inventory.cpp](#).

#### 32.87.3.2 stdair::Inventory::~~Inventory () [protected]

Destructor.

Definition at line 38 of file [Inventory.cpp](#).

### 32.87.4 Member Function Documentation

#### 32.87.4.1 const Key\_T& stdair::Inventory::getKey () const [inline]

Get the inventory key (airline code).

Definition at line 51 of file [Inventory.hpp](#).

References [\\_key](#).

#### 32.87.4.2 const AirlineCode\_T& stdair::Inventory::getAirlineCode () const [inline]

Get the airline code (inventory/primary key).

Definition at line 56 of file [Inventory.hpp](#).

References [\\_key](#), and [stdair::InventoryKey::getAirlineCode\(\)](#).

Referenced by [stdair::OnDDate::getAirlineCode\(\)](#), [stdair::FlightDate::getAirlineCode\(\)](#), [stdair::BomJSONExport::jsonExportFlightDateList\(\)](#), and [stdair::BomRetriever::retrieveSegmentDateFromLongKey\(\)](#).

#### 32.87.4.3 ForecastingMethod::EN\_ForecastingMethod stdair::Inventory::getForecastingMethod () const

Get the forecasting method.

Definition at line 64 of file [Inventory.cpp](#).

References [\\_airlineFeature](#), and [stdair::AirlineFeature::getForecastingMethod\(\)](#).

#### 32.87.4.4 UnconstrainingMethod::EN\_UnconstrainingMethod stdair::Inventory::getUnconstrainingMethod () const

Get the unconstraining method.

Definition at line 71 of file [Inventory.cpp](#).

References [\\_airlineFeature](#), and [stdair::AirlineFeature::getUnconstrainingMethod\(\)](#).

#### 32.87.4.5 PreOptimisationMethod::EN\_PreOptimisationMethod stdair::Inventory::getPreOptimisationMethod () const

Get the pre-optimisation method.

Definition at line 78 of file [Inventory.cpp](#).

References [\\_airlineFeature](#), and [stdair::AirlineFeature::getPreOptimisationMethod\(\)](#).

#### 32.87.4.6 OptimisationMethod::EN\_OptimisationMethod stdair::Inventory::getOptimisationMethod () const

Get the optimisation method.

Definition at line 85 of file [Inventory.cpp](#).

References [\\_airlineFeature](#), and [stdair::AirlineFeature::getOptimisationMethod\(\)](#).

#### 32.87.4.7 PartnershipTechnique::EN\_PartnershipTechnique stdair::Inventory::getPartnershipTechnique () const

Get the partnership technique.

Definition at line 92 of file [Inventory.cpp](#).

References [\\_airlineFeature](#), and [stdair::AirlineFeature::getPartnershipTechnique\(\)](#).

#### 32.87.4.8 BomAbstract\* const stdair::Inventory::getParent () const [inline]

Get the parent object.

Definition at line 76 of file [Inventory.hpp](#).

References [\\_parent](#).

#### 32.87.4.9 const HolderMap\_T& stdair::Inventory::getHolderMap () const [inline]

Get the map of children.

Definition at line 81 of file [Inventory.hpp](#).

References [\\_holderMap](#).

**32.87.4.10** `FlightDate * stdair::Inventory::getFlightDate (const std::string & iFlightDateKeyStr) const`

Get a pointer on the [FlightDate](#) object corresponding to the given key.

**Note:**

The [FlightDate](#) object can be inherited from, if needed. In that case, a `dynamic_cast<>` may be needed.

**Parameters:**

`const std::string&` The flight-date key.

**Returns:**

`FlightDate*` Found [FlightDate](#) object. NULL if not found.

Definition at line 50 of file [Inventory.cpp](#).

Referenced by [getFlightDate\(\)](#), [stdair::BomRetriever::retrieveFlightDateFromKey\(\)](#), and [stdair::BomRetriever::retrieveFlightDateFromLongKey\(\)](#).

**32.87.4.11** `FlightDate * stdair::Inventory::getFlightDate (const FlightDateKey & iFlightDateKey) const`

Get a pointer on the [FlightDate](#) object corresponding to the given key.

**Note:**

The [FlightDate](#) object can be inherited from, if needed. In that case, a `dynamic_cast<>` may be needed.

**Parameters:**

`const FlightDateKey&` The flight-date key

**Returns:**

`FlightDate*` Found [FlightDate](#) object. NULL if not found.

Definition at line 58 of file [Inventory.cpp](#).

References [getFlightDate\(\)](#), and [stdair::FlightDateKey::toString\(\)](#).

**32.87.4.12** `AirlineFeature* stdair::Inventory::getAirlineFeature () const [inline]`

Get the airline feature.

Definition at line 112 of file [Inventory.hpp](#).

References [\\_airlineFeature](#).

**32.87.4.13** `void stdair::Inventory::toStream (std::ostream & ioOut) const [inline, virtual]`

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 132 of file [Inventory.hpp](#).

References [toString\(\)](#).

**32.87.4.14 void stdair::Inventory::fromStream (std::istream & ioIn) [inline, virtual]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 141 of file [Inventory.hpp](#).

**32.87.4.15 std::string stdair::Inventory::toString () const [virtual]**

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 42 of file [Inventory.cpp](#).

References [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

**32.87.4.16 const std::string stdair::Inventory::describeKey () const [inline]**

Get a string describing the key.

Definition at line 152 of file [Inventory.hpp](#).

References [\\_key](#), and [stdair::InventoryKey::toString\(\)](#).

Referenced by [stdair::BomRetriever::retrieveFullKeyFromSegmentDate\(\)](#), and [toString\(\)](#).

**32.87.4.17 template<class Archive > void stdair::Inventory::serialize (Archive & ar, const unsigned int iFileVersion) [inline]**

Serialisation.

Definition at line 160 of file [CmdBomSerialiser.cpp](#).

References [\\_key](#).

**32.87.5 Friends And Related Function Documentation****32.87.5.1 friend class FacBom [friend]**

Definition at line 35 of file [Inventory.hpp](#).

### 32.87.5.2 friend class FacCloneBom [friend]

Definition at line 36 of file [Inventory.hpp](#).

## 32.88 stdair::InventoryKey Struct Reference

Key of a given inventory, made of the airline code.

`#include <stdair/bom/InventoryKey.hpp>`Inheritance diagram for stdair::InventoryKey::

### Public Member Functions

- [InventoryKey](#) (const [AirlineCode\\_T](#) &iAirlineCode)
- [InventoryKey](#) (const [InventoryKey](#) &)
- [~InventoryKey](#) ()
- const [AirlineCode\\_T](#) & [getAirlineCode](#) () const
- void [toStream](#) (std::ostream &ioOut) const
- void [fromStream](#) (std::istream &ioIn)
- const std::string [toString](#) () const
- template<class Archive >  
void [serialize](#) (Archive &ar, const unsigned int iFileVersion)

### Friends

- class [boost::serialization::access](#)

### 32.88.1 Detailed Description

Key of a given inventory, made of the airline code.

Definition at line 26 of file [InventoryKey.hpp](#).

### 32.88.2 Constructor & Destructor Documentation

#### 32.88.2.1 stdair::InventoryKey::InventoryKey (const AirlineCode\_T & iAirlineCode)

Constructor.

Definition at line 23 of file [InventoryKey.cpp](#).

### 32.88.2.2 stdair::InventoryKey::InventoryKey (const InventoryKey & iKey)

Copy constructor.

Definition at line 28 of file [InventoryKey.cpp](#).

### 32.88.2.3 stdair::InventoryKey::~~InventoryKey ()

Destructor.

Definition at line 33 of file [InventoryKey.cpp](#).

## 32.88.3 Member Function Documentation

### 32.88.3.1 const AirlineCode\_T& stdair::InventoryKey::getAirlineCode () const [inline]

Get the airline code.

Definition at line 58 of file [InventoryKey.hpp](#).

Referenced by [stdair::Inventory::getAirlineCode\(\)](#), [stdair::BomRetriever::retrieveInventoryFromLongKey\(\)](#), and [stdair::BomRetriever::retrievePartnerSegmentDateFromLongKey\(\)](#).

### 32.88.3.2 void stdair::InventoryKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 37 of file [InventoryKey.cpp](#).

References [toString\(\)](#).

### 32.88.3.3 void stdair::InventoryKey::fromStream (std::istream & ioIn) [virtual]

Read a Business Object Key from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 42 of file [InventoryKey.cpp](#).

### 32.88.3.4 const std::string stdair::InventoryKey::toString () const [virtual]

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-date.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 46 of file [InventoryKey.cpp](#).

Referenced by [stdair::Inventory::describeKey\(\)](#), [stdair::BomRoot::getInventory\(\)](#), and [toStream\(\)](#).

**32.88.3.5** `template<class Archive > void stdair::InventoryKey::serialize (Archive & ar, const unsigned int iFileVersion) [inline]`

Serialisation.

Definition at line 68 of file [InventoryKey.cpp](#).

## 32.88.4 Friends And Related Function Documentation

**32.88.4.1** `friend class boost::serialization::access [friend]`

Definition at line 27 of file [InventoryKey.hpp](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/InventoryKey.hpp](#)
- [stdair/bom/InventoryKey.cpp](#)

## 32.89 stdair::JJsonCommand Struct Reference

Enumeration of json commands.

```
#include <stdair/basic/JJsonCommand.hpp>
stdair::JJsonCommand::
```

diagram

for

### Public Types

- enum [EN\\_JJsonCommand](#) {  
[LIST](#) = 0, [FLIGHT\\_DATE](#), [EVENT\\_LIST](#), [BREAK\\_POINT](#),  
[RUN](#), [RESET](#), [STATUS](#), [CONFIG](#),  
[LAST\\_VALUE](#) }

### Public Member Functions

- [EN\\_JJsonCommand](#) [getCommand](#) () const

- void [toStream](#) (std::ostream &ioOut) const
- virtual void [fromStream](#) (std::istream &ioIn)

### Static Public Member Functions

- static [EN\\_JJsonCommand](#) [getCommand](#) (const std::string &iCommandStr)
- static std::string [getLabel](#) (const [EN\\_JJsonCommand](#) &)
- static std::string [describeLabels](#) ()

#### 32.89.1 Detailed Description

Enumeration of json commands.

Definition at line 17 of file [JJsonCommand.hpp](#).

#### 32.89.2 Member Enumeration Documentation

##### 32.89.2.1 enum stdair::JJsonCommand::EN\_JJsonCommand

Enumerator:

*LIST*  
*FLIGHT\_DATE*  
*EVENT\_LIST*  
*BREAK\_POINT*  
*RUN*  
*RESET*  
*STATUS*  
*CONFIG*  
*LAST\_VALUE*

Definition at line 19 of file [JJsonCommand.hpp](#).

#### 32.89.3 Constructor & Destructor Documentation

##### 32.89.3.1 stdair::JJsonCommand::JJsonCommand (const [EN\\_JJsonCommand](#) &)

Main Constructor.

##### 32.89.3.2 stdair::JJsonCommand::JJsonCommand (const std::string & *iCommandStr*)

Alternative constructor.

Definition at line 71 of file [JJsonCommand.cpp](#).

References [getCommand\(\)](#).

### 32.89.3.3 stdair::JJsonCommand::JJsonCommand (const JJsonCommand & *iJJsonCommand*)

Default copy constructor.

Definition at line 25 of file [JJsonCommand.cpp](#).

## 32.89.4 Member Function Documentation

### 32.89.4.1 JJsonCommand::EN\_JJsonCommand stdair::JJsonCommand::getCommand (const std::string & *iCommandStr*) [static]

Get the command value from parsing a single char (e.g., "list", "flight\_date", "event\_list", "break\_point", "run", "reset", "status" or "config").

Definition at line 31 of file [JJsonCommand.cpp](#).

References [BREAK\\_POINT](#), [CONFIG](#), [describeLabels\(\)](#), [EVENT\\_LIST](#), [FLIGHT\\_DATE](#), [LAST\\_VALUE](#), [LIST](#), [RESET](#), [RUN](#), and [STATUS](#).

Referenced by [stdair::BomJSONImport::jsonImportCommand\(\)](#).

### 32.89.4.2 std::string stdair::JJsonCommand::getLabel (const EN\_JJsonCommand & *iCommand*) [static]

Get a label of a command

Definition at line 66 of file [JJsonCommand.cpp](#).

### 32.89.4.3 std::string stdair::JJsonCommand::describeLabels () [static]

List the labels.

Definition at line 77 of file [JJsonCommand.cpp](#).

References [LAST\\_VALUE](#).

Referenced by [getCommand\(\)](#).

### 32.89.4.4 JJsonCommand::EN\_JJsonCommand stdair::JJsonCommand::getCommand () const

Get the enumerated value.

Definition at line 89 of file [JJsonCommand.cpp](#).

Referenced by [JJsonCommand\(\)](#).

### 32.89.4.5 const std::string stdair::JJsonCommand::describe () const [virtual]

Give a description of the structure (e.g., "list", "flight\_date", "event\_list", "break\_point" "run", "reset", "status" or "config").

Implements [stdair::StructAbstract](#).

Definition at line 94 of file [JJsonCommand.cpp](#).

**32.89.4.6 bool stdair::JJsonCommand::operator==(const EN\_JJsonCommand & iCommand) const**

Comparison operator.

Definition at line 102 of file [JJsonCommand.cpp](#).**32.89.4.7 void stdair::StructAbstract::toStream (std::ostream & ioOut) const [inline, inherited]**

Dump a Business Object into an output stream.

**Parameters:***ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

**32.90 stdair::JSONString Class Reference**

JSON-formatted string.

#include &lt;stdair/stdair\_json.hpp&gt;

## Public Member Functions

- [JSONString](#) (const std::string &iJsonString)
- [JSONString](#) ()
- virtual [~JSONString](#) ()
- const std::string & [getString](#) () const

## Protected Attributes

- std::string [\\_jsonString](#)

### 32.90.1 Detailed Description

JSON-formatted string.

Definition at line 16 of file [stdair\\_json.hpp](#).

### 32.90.2 Constructor & Destructor Documentation

#### 32.90.2.1 stdair::JSONString::JSONString (const std::string &iJsonString) [inline, explicit]

Main Constructor.

Definition at line 21 of file [stdair\\_json.hpp](#).

#### 32.90.2.2 stdair::JSONString::JSONString () [inline, explicit]

Default constructor.

Definition at line 26 of file [stdair\\_json.hpp](#).

#### 32.90.2.3 virtual stdair::JSONString::~~JSONString () [inline, virtual]

Destructor.

Definition at line 31 of file [stdair\\_json.hpp](#).

### 32.90.3 Member Function Documentation

#### 32.90.3.1 const std::string& stdair::JSONString::getString () const [inline]

Get the string value.

Definition at line 36 of file [stdair\\_json.hpp](#).

References [\\_jsonString](#).

Referenced by [stdair::BomJSONImport::jsonImportBreakPoints\(\)](#), [stdair::BomJSONImport::jsonImportCommand\(\)](#), [stdair::BomJSONImport::jsonImportConfig\(\)](#), [stdair::BomJSONImport::jsonImportEventType\(\)](#), [stdair::BomJSONImport::jsonImportFlightDate\(\)](#), [stdair::BomJSONImport::jsonImportFlightNumber\(\)](#), and [stdair::BomJSONImport::jsonImportInventoryKey\(\)](#).

### 32.90.4 Member Data Documentation

#### 32.90.4.1 std::string stdair::JSONString::\_jsonString [protected]

Definition at line 44 of file [stdair\\_json.hpp](#).

Referenced by [getString\(\)](#).

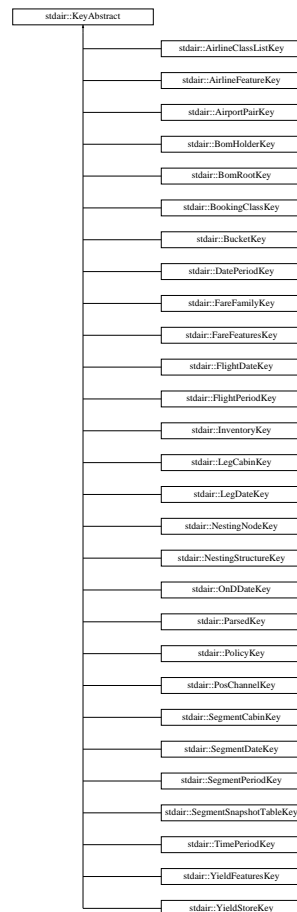

The documentation for this class was generated from the following file:

- [stdair/stdair\\_json.hpp](#)

## 32.91 stdair::KeyAbstract Struct Reference

Base class for the keys of Business Object Model (BOM) layer.

#include <stdair/bom/KeyAbstract.hpp> Inheritance diagram for stdair::KeyAbstract::

### Public Member Functions

- virtual void [toStream](#) (std::ostream &ioOut) const  
Dump a Business Object Key into an output stream.

- virtual void [fromStream](#) (std::istream &ioIn)  
*Read a Business Object Key from an input stream.*
- virtual const std::string [toString](#) () const  
*Get the serialised version of the Business Object Key.*
- virtual [~KeyAbstract](#) ()  
*Default destructor.*

### 32.91.1 Detailed Description

Base class for the keys of Business Object Model (BOM) layer. Note that that key allows to differentiate two objects at the same level only. For instance, the segment-date key allows to differentiate two segment-dates under a given flight-date, but does not allow to differentiate two segment-dates in general.

Definition at line 27 of file [KeyAbstract.hpp](#).

### 32.91.2 Constructor & Destructor Documentation

#### 32.91.2.1 virtual stdair::KeyAbstract::~~KeyAbstract () [inline, virtual]

Default destructor.

Definition at line 61 of file [KeyAbstract.hpp](#).

### 32.91.3 Member Function Documentation

#### 32.91.3.1 virtual void stdair::KeyAbstract::toStream (std::ostream & ioOut) const [inline, virtual]

Dump a Business Object Key into an output stream.

#### Parameters:

↔ *ostream&* the output stream.

Reimplemented in [stdair::AirlineClassListKey](#), [stdair::AirlineFeatureKey](#), [stdair::AirportPairKey](#), [stdair::BomHolderKey](#), [stdair::BomRootKey](#), [stdair::BookingClassKey](#), [stdair::BucketKey](#), [stdair::DatePeriodKey](#), [stdair::FareFamilyKey](#), [stdair::FareFeaturesKey](#), [stdair::FlightDateKey](#), [stdair::FlightPeriodKey](#), [stdair::InventoryKey](#), [stdair::LegCabinKey](#), [stdair::LegDateKey](#), [stdair::NestingNodeKey](#), [stdair::NestingStructureKey](#), [stdair::OnDDateKey](#), [stdair::ParsedKey](#), [stdair::PolicyKey](#), [stdair::PosChannelKey](#), [stdair::SegmentCabinKey](#), [stdair::SegmentDateKey](#), [stdair::SegmentPeriodKey](#), [stdair::SegmentSnapshotTableKey](#), [stdair::TimePeriodKey](#), [stdair::YieldFeaturesKey](#), and [stdair::YieldStoreKey](#).

Definition at line 36 of file [KeyAbstract.hpp](#).

### 32.91.3.2 virtual void stdair::KeyAbstract::fromStream (std::istream & ioIn) [inline, virtual]

Read a Business Object Key from an input stream.

#### Parameters:

↔ *istream&* the input stream.

Reimplemented in [stdair::AirlineClassListKey](#), [stdair::AirlineFeatureKey](#), [stdair::AirportPairKey](#), [stdair::BomHolderKey](#), [stdair::BomRootKey](#), [stdair::BookingClassKey](#), [stdair::BucketKey](#), [stdair::DatePeriodKey](#), [stdair::FareFamilyKey](#), [stdair::FareFeaturesKey](#), [stdair::FlightDateKey](#), [stdair::FlightPeriodKey](#), [stdair::InventoryKey](#), [stdair::LegCabinKey](#), [stdair::LegDateKey](#), [stdair::NestingNodeKey](#), [stdair::NestingStructureKey](#), [stdair::OnDDateKey](#), [stdair::ParsedKey](#), [stdair::PolicyKey](#), [stdair::PosChannelKey](#), [stdair::SegmentCabinKey](#), [stdair::SegmentDateKey](#), [stdair::SegmentPeriodKey](#), [stdair::SegmentSnapshotTableKey](#), [stdair::TimePeriodKey](#), [stdair::YieldFeaturesKey](#), and [stdair::YieldStoreKey](#).

Definition at line 43 of file [KeyAbstract.hpp](#).

Referenced by [operator>>\(\)](#).

### 32.91.3.3 virtual const std::string stdair::KeyAbstract::toString () const [inline, virtual]

Get the serialised version of the Business Object Key. That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-date.

#### Parameters:

→ *const std::string* The serialised version of the Business Object Key.

Reimplemented in [stdair::AirlineClassListKey](#), [stdair::AirlineFeatureKey](#), [stdair::AirportPairKey](#), [stdair::BomHolderKey](#), [stdair::BomRootKey](#), [stdair::BookingClassKey](#), [stdair::BucketKey](#), [stdair::DatePeriodKey](#), [stdair::FareFamilyKey](#), [stdair::FareFeaturesKey](#), [stdair::FlightDateKey](#), [stdair::FlightPeriodKey](#), [stdair::InventoryKey](#), [stdair::LegCabinKey](#), [stdair::LegDateKey](#), [stdair::NestingNodeKey](#), [stdair::NestingStructureKey](#), [stdair::OnDDateKey](#), [stdair::ParsedKey](#), [stdair::PolicyKey](#), [stdair::PosChannelKey](#), [stdair::SegmentCabinKey](#), [stdair::SegmentDateKey](#), [stdair::SegmentPeriodKey](#), [stdair::SegmentSnapshotTableKey](#), [stdair::TimePeriodKey](#), [stdair::YieldFeaturesKey](#), and [stdair::YieldStoreKey](#).

Definition at line 56 of file [KeyAbstract.hpp](#).

The documentation for this struct was generated from the following file:

Destructor.

Definition at line 69 of file [LegCabin.cpp](#).

## 32.94.4 Member Function Documentation

### 32.94.4.1 const Key\_T& stdair::LegCabin::getKey () const [inline]

Get the leg-cabin key (cabin code).

Definition at line 42 of file [LegCabin.hpp](#).

References [\\_key](#).

### 32.94.4.2 BomAbstract\* const stdair::LegCabin::getParent () const [inline]

Get the parent object.

Definition at line 49 of file [LegCabin.hpp](#).

References [\\_parent](#).

### 32.94.4.3 const CabinCode\_T& stdair::LegCabin::getCabinCode () const [inline]

Get the cabin code (from key).

Definition at line 56 of file [LegCabin.hpp](#).

References [\\_key](#), and [stdair::LegCabinKey::getCabinCode\(\)](#).

Referenced by [getFullerKey\(\)](#).

### 32.94.4.4 const MapKey\_T stdair::LegCabin::getFullerKey () const

Get the (leg-date, leg-cabin) key (board point and cabin code).

#### Note:

That method assumes that the parent object derives from the [SegmentDate](#) class, as it needs to have access to the [describeKey\(\)](#) method.

Definition at line 80 of file [LegCabin.cpp](#).

References [stdair::DEFAULT\\_KEY\\_FLD\\_DELIMITER](#), [stdair::LegDate::describeKey\(\)](#), and [getCabinCode\(\)](#).

### 32.94.4.5 const HolderMap\_T& stdair::LegCabin::getHolderMap () const [inline]

Get the map of children holders.

Definition at line 72 of file [LegCabin.hpp](#).

References [\\_holderMap](#).

**32.94.4.6 const CabinCapacity\_T& stdair::LegCabin::getOfferedCapacity () const [inline]**

Get the cabin offered capacity.

Definition at line 77 of file [LegCabin.hpp](#).

References [\\_offeredCapacity](#).

**32.94.4.7 const CabinCapacity\_T& stdair::LegCabin::getPhysicalCapacity () const [inline]**

Get the cabin physical capacity.

Definition at line 82 of file [LegCabin.hpp](#).

References [\\_physicalCapacity](#).

**32.94.4.8 const NbOfSeats\_T& stdair::LegCabin::getSoldSeat () const [inline]**

Get the number of sold seat.

Definition at line 87 of file [LegCabin.hpp](#).

References [\\_soldSeat](#).

**32.94.4.9 const CommittedSpace\_T& stdair::LegCabin::getCommittedSpace () const [inline]**

Get the value of committed space.

Definition at line 92 of file [LegCabin.hpp](#).

References [\\_committedSpace](#).

**32.94.4.10 const Availability\_T& stdair::LegCabin::getAvailabilityPool () const [inline]**

Get the value of the availability pool.

Definition at line 97 of file [LegCabin.hpp](#).

References [\\_availabilityPool](#).

**32.94.4.11 const Availability\_T& stdair::LegCabin::getAvailability () const [inline]**

Get the value of the availability.

Definition at line 102 of file [LegCabin.hpp](#).

References [\\_availability](#).

**32.94.4.12 const BidPrice\_T& stdair::LegCabin::getCurrentBidPrice () const [inline]**

Get the current Bid-Price.

Definition at line 107 of file [LegCabin.hpp](#).

References [\\_currentBidPrice](#).

**32.94.4.13 const BidPrice\_T& stdair::LegCabin::getPreviousBidPrice () const [inline]**

Get the previous Bid-Price.

Definition at line 112 of file [LegCabin.hpp](#).

References [\\_previousBidPrice](#).

**32.94.4.14 const BidPriceVector\_T& stdair::LegCabin::getBidPriceVector () const [inline]**

Get the Bid-Price Vector.

Definition at line 117 of file [LegCabin.hpp](#).

References [\\_bidPriceVector](#).

**32.94.4.15 const CapacityAdjustment\_T& stdair::LegCabin::getRegradeAdjustment () const [inline]**

Get the capacity adjustment due to check-in (DCS) regrade.

Definition at line 122 of file [LegCabin.hpp](#).

References [\\_dcsRegrade](#).

**32.94.4.16 const AuthorizationLevel\_T& stdair::LegCabin::getAuthorizationLevel () const [inline]**

Authorisation Level (AU).

Definition at line 127 of file [LegCabin.hpp](#).

References [\\_au](#).

**32.94.4.17 const UPR\_T& stdair::LegCabin::getUPR () const [inline]**

Unsold Protection (UPR).

Definition at line 132 of file [LegCabin.hpp](#).

References [\\_upr](#).

**32.94.4.18 const Availability\_T& stdair::LegCabin::getNetAvailability () const [inline]**

Net Availability (NAV).

Definition at line 137 of file [LegCabin.hpp](#).

References [\\_nav](#).

**32.94.4.19 const Availability\_T& stdair::LegCabin::getGrossAvailability () const [inline]**

Gross Availability (GAV).

Definition at line 142 of file [LegCabin.hpp](#).

References [\\_gav](#).

**32.94.4.20** `const OverbookingRate_T& stdair::LegCabin::getAvgCancellationPercentage () const [inline]`

Average Cancellation Percentage (ACP).

Definition at line 147 of file [LegCabin.hpp](#).

References [\\_acp](#).

**32.94.4.21** `const NbOfSeats_T& stdair::LegCabin::getETB () const [inline]`

Expected to Board (ETB).

Definition at line 152 of file [LegCabin.hpp](#).

References [\\_etb](#).

**32.94.4.22** `const NbOfSeats_T& stdair::LegCabin::getStaffNbOfSeats () const [inline]`

Number of staff bookings.

Definition at line 157 of file [LegCabin.hpp](#).

References [\\_staffNbOfBookings](#).

**32.94.4.23** `const NbOfSeats_T& stdair::LegCabin::getWLNbOfSeats () const [inline]`

Number of wait-listed bookings.

Definition at line 162 of file [LegCabin.hpp](#).

References [\\_wlNbOfBookings](#).

**32.94.4.24** `const NbOfSeats_T& stdair::LegCabin::getGroupNbOfSeats () const [inline]`

Number of group bookings.

Definition at line 167 of file [LegCabin.hpp](#).

References [\\_groupNbOfBookings](#).

**32.94.4.25** `VirtualClassList_T& stdair::LegCabin::getVirtualClassList () [inline]`

The virtual class list.

Definition at line 172 of file [LegCabin.hpp](#).

References [\\_virtualClassList](#).

**32.94.4.26** `BidPriceVector_T& stdair::LegCabin::getBidPriceVector () [inline]`

Reset the bid price vector and return it.

Definition at line 177 of file [LegCabin.hpp](#).

References [\\_bidPriceVector](#).

**32.94.4.27** `const YieldLevelDemandMap_T& stdair::LegCabin::getYieldLevelDemandMap ()  
[inline]`

Get the yield-demand map.

Definition at line 183 of file [LegCabin.hpp](#).

References [\\_yieldLevelDemandMap](#).

**32.94.4.28** `void stdair::LegCabin::setCapacities (const CabinCapacity_T & iCapacity)`

Set the offered and physical capacities.

Definition at line 73 of file [LegCabin.cpp](#).

References [\\_committedSpace](#), [\\_offeredCapacity](#), [\\_physicalCapacity](#), and [setAvailabilityPool\(\)](#).

**32.94.4.29** `void stdair::LegCabin::setSoldSeat (const NbOfSeats_T & iSoldSeat) [inline]`

Set the number of sold seat.

Definition at line 194 of file [LegCabin.hpp](#).

References [\\_soldSeat](#).

**32.94.4.30** `void stdair::LegCabin::setCommittedSpace (const CommittedSpace_T &  
iCommittedSpace) [inline]`

Set the value of committed space.

Definition at line 199 of file [LegCabin.hpp](#).

References [\\_committedSpace](#).

**32.94.4.31** `void stdair::LegCabin::setAvailabilityPool (const Availability_T & iAvailabilityPool)  
[inline]`

Set the value of availability pool.

Definition at line 204 of file [LegCabin.hpp](#).

References [\\_availabilityPool](#).

Referenced by [setCapacities\(\)](#).

**32.94.4.32** `void stdair::LegCabin::setAvailability (const Availability_T & iAvailability)  
[inline]`

Set the value of availability.

Definition at line 209 of file [LegCabin.hpp](#).

References [\\_availability](#).

**32.94.4.33** void stdair::LegCabin::setCurrentBidPrice (const BidPrice\_T & *iBidPrice*)  
[inline]

Set the current Bid-Price.

Definition at line 214 of file [LegCabin.hpp](#).

References [\\_currentBidPrice](#).

**32.94.4.34** void stdair::LegCabin::setPreviousBidPrice (const BidPrice\_T & *iBidPrice*)  
[inline]

Set the previous Bid-Price.

Definition at line 219 of file [LegCabin.hpp](#).

References [\\_previousBidPrice](#).

**32.94.4.35** void stdair::LegCabin::updatePreviousBidPrice () [inline]

Update the previous bid price value with the current one.

Definition at line 224 of file [LegCabin.hpp](#).

References [\\_currentBidPrice](#), and [\\_previousBidPrice](#).

**32.94.4.36** void stdair::LegCabin::setRegradeAdjustment (const CapacityAdjustment\_T & *iRegradeAdjustment*) [inline]

Get the capacity adjustment due to check-in (DCS) regrade.

Definition at line 229 of file [LegCabin.hpp](#).

References [\\_dcsRegrade](#).

**32.94.4.37** void stdair::LegCabin::setAuthorizationLevel (const AuthorizationLevel\_T & *iAU*)  
[inline]

Set the Authorisation Level (AU).

Definition at line 234 of file [LegCabin.hpp](#).

References [\\_au](#).

**32.94.4.38** void stdair::LegCabin::setUPR (const UPR\_T & *iUPR*) [inline]

Set the Unsold Protection (UPR).

Definition at line 239 of file [LegCabin.hpp](#).

References [\\_upr](#).

**32.94.4.39** void stdair::LegCabin::setNetAvailability (const Availability\_T & *iNAV*) [inline]

Set the Net Availability (NAV).

Definition at line 244 of file [LegCabin.hpp](#).

References [\\_nav](#).

#### 32.94.4.40 void stdair::LegCabin::setGrossAvailability (const Availability\_T & iGAV) [inline]

Set the Gross Availability (GAV).

Definition at line 249 of file [LegCabin.hpp](#).

References [\\_gav](#).

#### 32.94.4.41 void stdair::LegCabin::setAvgCancellationPercentage (const OverbookingRate\_T & iACP) [inline]

Set the Average Cancellation Percentage (ACP).

Definition at line 254 of file [LegCabin.hpp](#).

References [\\_acp](#).

#### 32.94.4.42 void stdair::LegCabin::setETB (const NbOfSeats\_T & iETB) [inline]

Set the Expected to Board (ETB).

Definition at line 259 of file [LegCabin.hpp](#).

References [\\_etb](#).

#### 32.94.4.43 void stdair::LegCabin::setStaffNbOfSeats (const NbOfSeats\_T & iStaffSeats) [inline]

Set the Number of staff sold seats.

Definition at line 264 of file [LegCabin.hpp](#).

References [\\_staffNbOfBookings](#).

#### 32.94.4.44 void stdair::LegCabin::setWLNbOfSeats (const NbOfSeats\_T & iWLSeats) [inline]

Set the Number of wait-listed sold seats.

Definition at line 269 of file [LegCabin.hpp](#).

References [\\_wlNbOfBookings](#).

#### 32.94.4.45 void stdair::LegCabin::setGroupNbOfSeats (const NbOfSeats\_T & iGroupSeats) [inline]

Set the Number of group sold seats.

Definition at line 274 of file [LegCabin.hpp](#).

References [\\_groupNbOfBookings](#).

**32.94.4.46 void stdair::LegCabin::updateCurrentBidPrice ()**

Update the bid price (from bid price vector if not empty).

Definition at line 120 of file [LegCabin.cpp](#).

References [\\_availabilityPool](#), [\\_bidPriceVector](#), and [\\_currentBidPrice](#).

**32.94.4.47 void stdair::LegCabin::toStream (std::ostream & ioOut) const [inline, virtual]**

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 288 of file [LegCabin.hpp](#).

References [toString\(\)](#).

**32.94.4.48 void stdair::LegCabin::fromStream (std::istream & ioIn) [inline, virtual]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 296 of file [LegCabin.hpp](#).

**32.94.4.49 std::string stdair::LegCabin::toString () const [virtual]**

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 89 of file [LegCabin.cpp](#).

References [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

**32.94.4.50 const std::string stdair::LegCabin::describeKey () const [inline]**

Get a string describing the key.

Definition at line 307 of file [LegCabin.hpp](#).

References [\\_key](#), and [stdair::LegCabinKey::toString\(\)](#).

Referenced by [toString\(\)](#).

**32.94.4.51** `const std::string stdair::LegCabin::displayVirtualClassList () const`

Display the virtual class list content.

Definition at line 96 of file [LegCabin.cpp](#).

References [\\_virtualClassList](#), [stdair::VirtualClassStruct::getCumulatedBookingLimit\(\)](#), [stdair::VirtualClassStruct::getCumulatedProtection\(\)](#), and [stdair::VirtualClassStruct::getYield\(\)](#).

**32.94.4.52** `void stdair::LegCabin::updateFromReservation (const NbOfBookings_T & iNbOfBookings)`

Register a sale.

Definition at line 114 of file [LegCabin.cpp](#).

References [\\_availabilityPool](#), [\\_committedSpace](#), and [\\_offeredCapacity](#).

**32.94.4.53** `void stdair::LegCabin::addVirtualClass (const VirtualClassStruct & iVC) [inline]`

Add a virtual class to the list.

Definition at line 327 of file [LegCabin.hpp](#).

References [\\_virtualClassList](#).

**32.94.4.54** `void stdair::LegCabin::emptyVirtualClassList () [inline]`

Empty the virtual class list.

Definition at line 334 of file [LegCabin.hpp](#).

References [\\_virtualClassList](#).

**32.94.4.55** `void stdair::LegCabin::emptyBidPriceVector () [inline]`

Empty the bid price vector.

Definition at line 341 of file [LegCabin.hpp](#).

References [\\_bidPriceVector](#).

**32.94.4.56** `void stdair::LegCabin::addDemandInformation (const YieldValue_T & iYield, const MeanValue_T & iMeanValue, const StdDevValue_T & iStdDevValue)`

Add demand information.

Definition at line 133 of file [LegCabin.cpp](#).

References [\\_yieldLevelDemandMap](#).

**32.94.4.57** `void stdair::LegCabin::emptyYieldLevelDemandMap () [inline]`

Reset the (yield level,demand) map.

Definition at line 354 of file [LegCabin.hpp](#).

References [\\_yieldLevelDemandMap](#).

### 32.94.5 Friends And Related Function Documentation

#### 32.94.5.1 friend class FacBom [friend]

Definition at line 26 of file [LegCabin.hpp](#).

#### 32.94.5.2 friend class FacCloneBom [friend]

Definition at line 27 of file [LegCabin.hpp](#).

#### 32.94.5.3 friend class FacBomManager [friend]

Definition at line 28 of file [LegCabin.hpp](#).

### 32.94.6 Member Data Documentation

#### 32.94.6.1 Key\_T stdair::LegCabin::\_key [protected]

Primary key (cabin code).

Definition at line 387 of file [LegCabin.hpp](#).

Referenced by [describeKey\(\)](#), [getCabinCode\(\)](#), and [getKey\(\)](#).

#### 32.94.6.2 BomAbstract\* stdair::LegCabin::\_parent [protected]

Pointer on the parent class ([LegDate](#)).

Definition at line 392 of file [LegCabin.hpp](#).

Referenced by [getParent\(\)](#).

#### 32.94.6.3 HolderMap\_T stdair::LegCabin::\_holderMap [protected]

Map holding the children ([Bucket](#) objects).

Definition at line 397 of file [LegCabin.hpp](#).

Referenced by [getHolderMap\(\)](#).

#### 32.94.6.4 CabinCapacity\_T stdair::LegCabin::\_offeredCapacity [protected]

Saleable capacity of the cabin.

Definition at line 400 of file [LegCabin.hpp](#).

Referenced by [getOfferedCapacity\(\)](#), [setCapacities\(\)](#), and [updateFromReservation\(\)](#).

**32.94.6.5 CabinCapacity\_T stdair::LegCabin::\_physicalCapacity [protected]**

Physical capacity of the cabin.

Definition at line 403 of file [LegCabin.hpp](#).

Referenced by [getPhysicalCapacity\(\)](#), and [setCapacities\(\)](#).

**32.94.6.6 NbOfSeats\_T stdair::LegCabin::\_soldSeat [protected]**

Aggregated number of sold seats.

Definition at line 406 of file [LegCabin.hpp](#).

Referenced by [getSoldSeat\(\)](#), and [setSoldSeat\(\)](#).

**32.94.6.7 CommittedSpace\_T stdair::LegCabin::\_committedSpace [protected]**

Definition at line 409 of file [LegCabin.hpp](#).

Referenced by [getCommittedSpace\(\)](#), [setCapacities\(\)](#), [setCommittedSpace\(\)](#), and [updateFromReservation\(\)](#).

**32.94.6.8 Availability\_T stdair::LegCabin::\_availabilityPool [protected]**

Availability pool.

Definition at line 412 of file [LegCabin.hpp](#).

Referenced by [getAvailabilityPool\(\)](#), [setAvailabilityPool\(\)](#), [updateCurrentBidPrice\(\)](#), and [updateFromReservation\(\)](#).

**32.94.6.9 Availability\_T stdair::LegCabin::\_availability [protected]**

Availability.

Definition at line 415 of file [LegCabin.hpp](#).

Referenced by [getAvailability\(\)](#), and [setAvailability\(\)](#).

**32.94.6.10 BidPrice\_T stdair::LegCabin::\_currentBidPrice [protected]**

Current Bid-Price (BP).

Definition at line 418 of file [LegCabin.hpp](#).

Referenced by [getCurrentBidPrice\(\)](#), [setCurrentBidPrice\(\)](#), [updateCurrentBidPrice\(\)](#), and [updatePreviousBidPrice\(\)](#).

**32.94.6.11 BidPrice\_T stdair::LegCabin::\_previousBidPrice [protected]**

Previous Bid-Price (BP).

Definition at line 421 of file [LegCabin.hpp](#).

Referenced by [getPreviousBidPrice\(\)](#), [setPreviousBidPrice\(\)](#), and [updatePreviousBidPrice\(\)](#).

#### 32.94.6.12 BidPriceVector\_T stdair::LegCabin::\_bidPriceVector [protected]

Bid-Price Vector (BPV).

Definition at line 424 of file [LegCabin.hpp](#).

Referenced by [emptyBidPriceVector\(\)](#), [getBidPriceVector\(\)](#), and [updateCurrentBidPrice\(\)](#).

#### 32.94.6.13 VirtualClassList\_T stdair::LegCabin::\_virtualClassList [protected]

List of virtual classes (for revenue management optimisation).

Definition at line 427 of file [LegCabin.hpp](#).

Referenced by [addVirtualClass\(\)](#), [displayVirtualClassList\(\)](#), [emptyVirtualClassList\(\)](#), and [getVirtualClassList\(\)](#).

#### 32.94.6.14 YieldLevelDemandMap\_T stdair::LegCabin::\_yieldLevelDemandMap [protected]

Map holding the demand information indexed by yield.

Definition at line 430 of file [LegCabin.hpp](#).

Referenced by [addDemandInformation\(\)](#), [emptyYieldLevelDemandMap\(\)](#), and [getYieldLevelDemandMap\(\)](#).

#### 32.94.6.15 CapacityAdjustment\_T stdair::LegCabin::\_dcsRegrade

Capacity adjustment of the cabin, due to check-in (DCS) regrade.

Definition at line 435 of file [LegCabin.hpp](#).

Referenced by [getRegradeAdjustment\(\)](#), and [setRegradeAdjustment\(\)](#).

#### 32.94.6.16 AuthorizationLevel\_T stdair::LegCabin::\_au

Authorisation Level (AU).

Definition at line 438 of file [LegCabin.hpp](#).

Referenced by [getAuthorizationLevel\(\)](#), and [setAuthorizationLevel\(\)](#).

#### 32.94.6.17 UPR\_T stdair::LegCabin::\_upr

Unsold Protection (UPR).

Definition at line 441 of file [LegCabin.hpp](#).

Referenced by [getUPR\(\)](#), and [setUPR\(\)](#).

**32.94.6.18 Availability\_T stdair::LegCabin::\_nav**

Net Availability (NAV).

Definition at line 444 of file [LegCabin.hpp](#).Referenced by [getNetAvailability\(\)](#), and [setNetAvailability\(\)](#).**32.94.6.19 Availability\_T stdair::LegCabin::\_gav**

Gross Availability (GAV).

Definition at line 447 of file [LegCabin.hpp](#).Referenced by [getGrossAvailability\(\)](#), and [setGrossAvailability\(\)](#).**32.94.6.20 OverbookingRate\_T stdair::LegCabin::\_acp**

Average Cancellation Percentage (ACP).

Definition at line 450 of file [LegCabin.hpp](#).Referenced by [getAvgCancellationPercentage\(\)](#), and [setAvgCancellationPercentage\(\)](#).**32.94.6.21 NbOfSeats\_T stdair::LegCabin::\_etb**

Expected to Board (ETB).

Definition at line 453 of file [LegCabin.hpp](#).Referenced by [getETB\(\)](#), and [setETB\(\)](#).**32.94.6.22 NbOfSeats\_T stdair::LegCabin::\_staffNbOfBookings**

Number of staff bookings.

Definition at line 456 of file [LegCabin.hpp](#).Referenced by [getStaffNbOfSeats\(\)](#), and [setStaffNbOfSeats\(\)](#).**32.94.6.23 NbOfSeats\_T stdair::LegCabin::\_wlNbOfBookings**

Number of wait-listed bookings.

Definition at line 459 of file [LegCabin.hpp](#).Referenced by [getWLNbOfSeats\(\)](#), and [setWLNbOfSeats\(\)](#).**32.94.6.24 NbOfSeats\_T stdair::LegCabin::\_groupNbOfBookings**

Number of group bookings.

Definition at line 462 of file [LegCabin.hpp](#).Referenced by [getGroupNbOfSeats\(\)](#), and [setGroupNbOfSeats\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/bom/LegCabin.hpp](#)
- [stdair/bom/LegCabin.cpp](#)

## 32.95 stdair::LegCabinKey Struct Reference

Key of a given leg-cabin, made of a cabin code (only).

`#include <stdair/bom/LegCabinKey.hpp>` Inheritance diagram for `stdair::LegCabinKey`:

### Public Member Functions

- [LegCabinKey](#) (const [CabinCode\\_T](#) &iCabinCode)
- [LegCabinKey](#) (const [LegCabinKey](#) &)
- [~LegCabinKey](#) ()
- const [CabinCode\\_T](#) & [getCabinCode](#) () const
- void [toStream](#) (std::ostream &ioOut) const
- void [fromStream](#) (std::istream &ioIn)
- const std::string [toString](#) () const
- template<class Archive >  
void [serialize](#) (Archive &ar, const unsigned int iFileVersion)

### Friends

- class [boost::serialization::access](#)

### 32.95.1 Detailed Description

Key of a given leg-cabin, made of a cabin code (only).

Definition at line 26 of file [LegCabinKey.hpp](#).

### 32.95.2 Constructor & Destructor Documentation

#### 32.95.2.1 stdair::LegCabinKey::LegCabinKey (const CabinCode\_T &iCabinCode)

Constructor.

Definition at line 23 of file [LegCabinKey.cpp](#).

#### 32.95.2.2 stdair::LegCabinKey::LegCabinKey (const LegCabinKey &iKey)

Copy constructor.

Definition at line 28 of file [LegCabinKey.cpp](#).

### 32.95.2.3 stdair::LegCabinKey::~~LegCabinKey ()

Destructor.

Definition at line 33 of file [LegCabinKey.cpp](#).

## 32.95.3 Member Function Documentation

### 32.95.3.1 const CabinCode\_T& stdair::LegCabinKey::getCabinCode () const [inline]

Get the cabin code.

Definition at line 56 of file [LegCabinKey.hpp](#).

Referenced by [stdair::LegCabin::getCabinCode\(\)](#).

### 32.95.3.2 void stdair::LegCabinKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 37 of file [LegCabinKey.cpp](#).

References [toString\(\)](#).

### 32.95.3.3 void stdair::LegCabinKey::fromStream (std::istream & ioIn) [virtual]

Read a Business Object Key from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 42 of file [LegCabinKey.cpp](#).

### 32.95.3.4 const std::string stdair::LegCabinKey::toString () const [virtual]

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-date.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 46 of file [LegCabinKey.cpp](#).

Referenced by [stdair::LegCabin::describeKey\(\)](#), [stdair::LegDate::getLegCabin\(\)](#), and [toStream\(\)](#).

**32.95.3.5** `template<class Archive > void stdair::LegCabinKey::serialize (Archive & ar, const unsigned int iFileVersion) [inline]`

Serialisation.

Definition at line 68 of file [LegCabinKey.cpp](#).

## 32.95.4 Friends And Related Function Documentation

**32.95.4.1** `friend class boost::serialization::access [friend]`

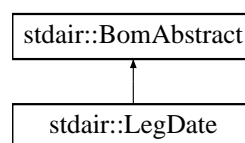

Definition at line 27 of file [LegCabinKey.hpp](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/LegCabinKey.hpp](#)
- [stdair/bom/LegCabinKey.cpp](#)

## 32.96 stdair::LegDate Class Reference

### 32.96.1 Detailed Description

Class representing the actual attributes for an airline leg-date.

Definition at line 25 of file [LegDate.hpp](#).

## 32.96.2 Member Typedef Documentation

### 32.96.2.1 typedef LegDateKey stdair::LegDate::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 33 of file [LegDate.hpp](#).

## 32.96.3 Constructor & Destructor Documentation

### 32.96.3.1 stdair::LegDate::LegDate (const Key\_T & iKey) [protected]

Constructor.

Definition at line 38 of file [LegDate.cpp](#).

### 32.96.3.2 stdair::LegDate::~~LegDate () [protected, virtual]

Destructor.

Definition at line 44 of file [LegDate.cpp](#).

## 32.96.4 Member Function Documentation

### 32.96.4.1 const Key\_T& stdair::LegDate::getKey () const [inline]

Get the leg-date key.

Definition at line 39 of file [LegDate.hpp](#).

References [\\_key](#).

### 32.96.4.2 BomAbstract\* const stdair::LegDate::getParent () const [inline]

Get the parent object.

Definition at line 44 of file [LegDate.hpp](#).

References [\\_parent](#).

Referenced by [describeRoutingKey\(\)](#), and [getAirlineCode\(\)](#).

### 32.96.4.3 const AirportCode\_T& stdair::LegDate::getBoardingPoint () const [inline]

Get the boarding point (part of the primary key).

Definition at line 49 of file [LegDate.hpp](#).

References [\\_key](#), and [stdair::LegDateKey::getBoardingPoint\(\)](#).

### 32.96.4.4 const AirlineCode\_T & stdair::LegDate::getAirlineCode () const

Get the airline code (key of the parent object).

**Note:**

That method assumes that the parent object derives from the [Inventory](#) class, as it needs to have access to the [getAirlineCode\(\)](#) method.

Definition at line 48 of file [LegDate.cpp](#).

References [stdair::FlightDate::getAirlineCode\(\)](#), and [getParent\(\)](#).

**32.96.4.5 const HolderMap\_T& stdair::LegDate::getHolderMap () const [inline]**

Get the map of children holders.

Definition at line 65 of file [LegDate.hpp](#).

References [\\_holderMap](#).

**32.96.4.6 LegCabin \* stdair::LegDate::getLegCabin (const std::string & iLegCabinKeyStr) const**

Get a pointer on the [LegCabin](#) object corresponding to the given key.

**Note:**

The [LegCabin](#) object can be inherited from, if needed. In that case, a `dynamic_cast<>` may be needed.

**Parameters:**

**const** std::string& The leg-cabin key.

**Returns:**

LegCabin\* Found [LegCabin](#) object. NULL if not found.

Definition at line 76 of file [LegDate.cpp](#).

Referenced by [getLegCabin\(\)](#), and [stdair::BomRetriever::retrieveDummyLegCabin\(\)](#).

**32.96.4.7 LegCabin \* stdair::LegDate::getLegCabin (const LegCabinKey & iLegCabinKey) const**

Get a pointer on the [LegCabin](#) object corresponding to the given key.

**Note:**

The [LegCabin](#) object can be inherited from, if needed. In that case, a `dynamic_cast<>` may be needed.

**Parameters:**

**const** [LegCabinKey](#)& The leg-cabin key

**Returns:**

LegCabin\* Found [LegCabin](#) object. NULL if not found.

Definition at line 83 of file [LegDate.cpp](#).

References [getLegCabin\(\)](#), and [stdair::LegCabinKey::toString\(\)](#).

**32.96.4.8 const AirportCode\_T& stdair::LegDate::getOffPoint () const [inline]**

Get the off point.

Definition at line 94 of file [LegDate.hpp](#).

References [\\_offPoint](#).

**32.96.4.9 const Date\_T& stdair::LegDate::getBoardingDate () const [inline]**

Get the boarding date.

Definition at line 99 of file [LegDate.hpp](#).

References [\\_boardingDate](#).

**32.96.4.10 const Duration\_T& stdair::LegDate::getBoardingTime () const [inline]**

Get the boarding time.

Definition at line 104 of file [LegDate.hpp](#).

References [\\_boardingTime](#).

**32.96.4.11 const Date\_T& stdair::LegDate::getOffDate () const [inline]**

Get the off date.

Definition at line 109 of file [LegDate.hpp](#).

References [\\_offDate](#).

**32.96.4.12 const Duration\_T& stdair::LegDate::getOffTime () const [inline]**

Get the off time.

Definition at line 114 of file [LegDate.hpp](#).

References [\\_offTime](#).

**32.96.4.13 const Duration\_T& stdair::LegDate::getElapsedTime () const [inline]**

Get the elapsed time.

Definition at line 119 of file [LegDate.hpp](#).

References [\\_elapsedTime](#).

**32.96.4.14 const Distance\_T& stdair::LegDate::getDistance () const [inline]**

Get the distance.

Definition at line 124 of file [LegDate.hpp](#).

References [\\_distance](#).

**32.96.4.15 const CabinCapacity\_T& stdair::LegDate::getCapacity () const [inline]**

Get the leg capacity.

Definition at line 129 of file [LegDate.hpp](#).

References [\\_capacity](#).

**32.96.4.16 const DateOffset\_T stdair::LegDate::getDateOffset () const [inline]**

Get the date offset (off date - boarding date).

Definition at line 134 of file [LegDate.hpp](#).

References [\\_boardingDate](#), and [\\_offDate](#).

Referenced by [getTimeOffset\(\)](#).

**32.96.4.17 const Duration\_T stdair::LegDate::getTimeOffset () const**

Get the time off set between boarding and off points.

It is defined as being:  $\text{TimeOffset} = (\text{OffTime} - \text{BoardingTime}) + (\text{OffDate} - \text{BoardingDate}) * 24$

- [ElapsedTime](#).

Definition at line 88 of file [LegDate.cpp](#).

References [\\_boardingTime](#), [\\_elapsedTime](#), [\\_offTime](#), and [getDateOffset\(\)](#).

**32.96.4.18 void stdair::LegDate::setOffPoint (const AirportCode\_T & iOffPoint) [inline]**

Set the off point.

Definition at line 148 of file [LegDate.hpp](#).

References [\\_offPoint](#).

**32.96.4.19 void stdair::LegDate::setBoardingDate (const Date\_T & iBoardingDate) [inline]**

Set the boarding date.

Definition at line 153 of file [LegDate.hpp](#).

References [\\_boardingDate](#).

**32.96.4.20 void stdair::LegDate::setBoardingTime (const Duration\_T & iBoardingTime) [inline]**

Set the boarding time.

Definition at line 158 of file [LegDate.hpp](#).

References [\\_boardingTime](#).

**32.96.4.21 void stdair::LegDate::setOffDate (const Date\_T & *iOffDate*) [inline]**

Set the off date.

Definition at line 163 of file [LegDate.hpp](#).

References [\\_offDate](#).

**32.96.4.22 void stdair::LegDate::setOffTime (const Duration\_T & *iOffTime*) [inline]**

Set the off time.

Definition at line 168 of file [LegDate.hpp](#).

References [\\_offTime](#).

**32.96.4.23 void stdair::LegDate::setElapsedTime (const Duration\_T & *iElapsedTime*)**

Set the elapsed time.

Definition at line 103 of file [LegDate.cpp](#).

References [\\_elapsedTime](#).

**32.96.4.24 void stdair::LegDate::setOperatingAirlineCode (const AirlineCode\_T & *iAirlineCode*) [inline]**

Set the operating airline code.

Definition at line 176 of file [LegDate.hpp](#).

References [\\_operatingAirlineCode](#).

**32.96.4.25 void stdair::LegDate::setOperatingFlightNumber (const FlightNumber\_T & *iFlightNumber*) [inline]**

Set the operating flight number.

Definition at line 181 of file [LegDate.hpp](#).

References [\\_operatingFlightNumber](#).

**32.96.4.26 void stdair::LegDate::toStream (std::ostream & *ioOut*) const [inline, virtual]**

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 194 of file [LegDate.hpp](#).

References [toString\(\)](#).

**32.96.4.27 void stdair::LegDate::fromStream (std::istream & *ioIn*) [inline, virtual]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 200 of file [LegDate.hpp](#).

**32.96.4.28 std::string stdair::LegDate::toString () const [virtual]**

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 56 of file [LegDate.cpp](#).

References [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

**32.96.4.29 const std::string stdair::LegDate::describeKey () const [inline]**

Get a string describing the key.

Definition at line 207 of file [LegDate.hpp](#).

References [\\_key](#), and [stdair::LegDateKey::toString\(\)](#).

Referenced by [describeRoutingKey\(\)](#), [stdair::LegCabin::getFullerKey\(\)](#), and [toString\(\)](#).

**32.96.4.30 const std::string stdair::LegDate::describeRoutingKey () const**

Get a string describing the routing key.

Definition at line 63 of file [LegDate.cpp](#).

References [\\_operatingAirlineCode](#), [\\_operatingFlightNumber](#), [stdair::DEFAULT\\_KEY\\_FLD\\_DELIMITER](#), [describeKey\(\)](#), [stdair::FlightDate::getDepartureDate\(\)](#), and [getParent\(\)](#).

**32.96.5 Friends And Related Function Documentation****32.96.5.1 friend class FacBom [friend]**

Definition at line 26 of file [LegDate.hpp](#).

**32.96.5.2 friend class FacCloneBom [friend]**

Definition at line 27 of file [LegDate.hpp](#).

### 32.96.5.3 friend class FacBomManager [friend]

Definition at line 28 of file [LegDate.hpp](#).

## 32.96.6 Member Data Documentation

### 32.96.6.1 Key\_T stdair::LegDate::\_key [protected]

Primary key (origin airport).

Definition at line 231 of file [LegDate.hpp](#).

Referenced by [describeKey\(\)](#), [getBoardingPoint\(\)](#), and [getKey\(\)](#).

### 32.96.6.2 BomAbstract\* stdair::LegDate::\_parent [protected]

Pointer on the parent class ([FlightDate](#)).

Definition at line 234 of file [LegDate.hpp](#).

Referenced by [getParent\(\)](#).

### 32.96.6.3 HolderMap\_T stdair::LegDate::\_holderMap [protected]

Map holding the children ([LegCabin](#) objects).

Definition at line 237 of file [LegDate.hpp](#).

Referenced by [getHolderMap\(\)](#).

### 32.96.6.4 AirportCode\_T stdair::LegDate::\_offPoint [protected]

Landing airport.

Definition at line 240 of file [LegDate.hpp](#).

Referenced by [getOffPoint\(\)](#), and [setOffPoint\(\)](#).

### 32.96.6.5 Date\_T stdair::LegDate::\_boardingDate [protected]

Boarding date.

Definition at line 243 of file [LegDate.hpp](#).

Referenced by [getBoardingDate\(\)](#), [getDateOffset\(\)](#), and [setBoardingDate\(\)](#).

### 32.96.6.6 Duration\_T stdair::LegDate::\_boardingTime [protected]

Boarding time.

Definition at line 246 of file [LegDate.hpp](#).

Referenced by [getBoardingTime\(\)](#), [getTimeOffset\(\)](#), and [setBoardingTime\(\)](#).

**32.96.6.7 Date\_T stdair::LegDate::\_offDate [protected]**

Landing date.

Definition at line 249 of file [LegDate.hpp](#).Referenced by [getDateOffset\(\)](#), [getOffDate\(\)](#), and [setOffDate\(\)](#).**32.96.6.8 Duration\_T stdair::LegDate::\_offTime [protected]**

Landing time.

Definition at line 252 of file [LegDate.hpp](#).Referenced by [getOffTime\(\)](#), [getTimeOffset\(\)](#), and [setOffTime\(\)](#).**32.96.6.9 Duration\_T stdair::LegDate::\_elapsedTime [protected]**

Trip elapsed time.

Definition at line 255 of file [LegDate.hpp](#).Referenced by [getElapsedTime\(\)](#), [getTimeOffset\(\)](#), and [setElapsedTime\(\)](#).**32.96.6.10 Distance\_T stdair::LegDate::\_distance [protected]**

Trip distance.

Definition at line 258 of file [LegDate.hpp](#).Referenced by [getDistance\(\)](#).**32.96.6.11 CabinCapacity\_T stdair::LegDate::\_capacity [protected]**

Aggregated capacity for all the leg-cabins.

Definition at line 261 of file [LegDate.hpp](#).Referenced by [getCapacity\(\)](#).**32.96.6.12 AirlineCode\_T stdair::LegDate::\_operatingAirlineCode [protected]**

Operating airline code.

Definition at line 264 of file [LegDate.hpp](#).Referenced by [describeRoutingKey\(\)](#), and [setOperatingAirlineCode\(\)](#).**32.96.6.13 FlightNumber\_T stdair::LegDate::\_operatingFlightNumber [protected]**

Operating flight number.

Definition at line 267 of file [LegDate.hpp](#).Referenced by [describeRoutingKey\(\)](#), and [setOperatingFlightNumber\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/bom/LegDate.hpp](#)
- [stdair/bom/LegDate.cpp](#)

## 32.97 stdair::LegDateKey Struct Reference

`#include <stdair/bom/LegDateKey.hpp>` Inheritance diagram for `stdair::LegDateKey`:

### Public Member Functions

- [LegDateKey](#) (const [AirportCode\\_T](#) & *iBoardingPoint*)
- [LegDateKey](#) (const [LegDateKey](#) &)
- [~LegDateKey](#) ()
- const [AirportCode\\_T](#) & [getBoardingPoint](#) () const
- void [toStream](#) (std::ostream & *ioOut*) const
- void [fromStream](#) (std::istream & *ioIn*)
- const std::string [toString](#) () const

### 32.97.1 Detailed Description

Key of a given leg-date, made of an origin airport.

Definition at line 16 of file [LegDateKey.hpp](#).

### 32.97.2 Constructor & Destructor Documentation

#### 32.97.2.1 stdair::LegDateKey::LegDateKey (const [AirportCode\\_T](#) & *iBoardingPoint*)

Constructor.

Definition at line 19 of file [LegDateKey.cpp](#).

#### 32.97.2.2 stdair::LegDateKey::LegDateKey (const [LegDateKey](#) & *iKey*)

Default copy constructor.

Definition at line 24 of file [LegDateKey.cpp](#).

#### 32.97.2.3 stdair::LegDateKey::~~LegDateKey ()

Destructor.

Definition at line 29 of file [LegDateKey.cpp](#).

### 32.97.3 Member Function Documentation

#### 32.97.3.1 const AirportCode\_T& stdair::LegDateKey::getBoardingPoint () const [inline]

Get the boarding point.

Definition at line 34 of file [LegDateKey.hpp](#).

Referenced by [stdair::LegDate::getBoardingPoint\(\)](#).

#### 32.97.3.2 void stdair::LegDateKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

##### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 33 of file [LegDateKey.cpp](#).

References [toString\(\)](#).

#### 32.97.3.3 void stdair::LegDateKey::fromStream (std::istream & ioIn) [virtual]

Read a Business Object Key from an input stream.

##### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 38 of file [LegDateKey.cpp](#).

#### 32.97.3.4 const std::string stdair::LegDateKey::toString () const [virtual]

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same leg-date.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 42 of file [LegDateKey.cpp](#).

Referenced by [stdair::LegDate::describeKey\(\)](#), [stdair::FlightDate::getLegDate\(\)](#), and [toStream\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/LegDateKey.hpp](#)
- [stdair/bom/LegDateKey.cpp](#)

## 32.98 stdair::Logger Class Reference

```
#include <stdair/service/Logger.hpp>
```

## Public Member Functions

- `template<typename T >  
void log (const LOG::EN_LogLevel iLevel, const int iLineNumber, const std::string &iFileName,  
const T &iToBeLogged)`

## Static Public Member Functions

- `static Logger &instance ()`

## Friends

- class FacSupervisor  
*Friend classes.*
- class STDAIR\_Service

### 32.98.1 Detailed Description

Class holding the stream for logs.

Note that the error logs are seen as standard output logs, but with a higher level of visibility.

Definition at line 48 of file [Logger.hpp](#).

### 32.98.2 Member Function Documentation

**32.98.2.1** `template<typename T > void stdair::Logger::log (const LOG::EN_LogLevel iLevel,  
const int iLineNumber, const std::string &iFileName, const T &iToBeLogged)  
[inline]`

Main log entry.

Definition at line 59 of file [Logger.hpp](#).

References [stdair::LOG::\\_logLevels](#).

**32.98.2.2** `Logger & stdair::Logger::instance () [static]`

Return the static [Logger](#) instance.

Definition at line 48 of file [Logger.cpp](#).

### 32.98.3 Friends And Related Function Documentation

**32.98.3.1** `friend class FacSupervisor [friend]`

Friend classes.

Definition at line 50 of file [Logger.hpp](#).

### 32.98.3.2 friend class STDAIR\_Service [friend]

Definition at line 51 of file [Logger.hpp](#).

The documentation for this class was generated from the following files:

- [stdair/service/Logger.hpp](#)
- [stdair/service/Logger.cpp](#)

## 32.99 stdair::MemoryAllocationException Class Reference

### Protected Member Functions

- [NestingNode](#) (const [Key\\_T](#) &)
- virtual [~NestingNode](#) ()

## Friends

- class [FacBom](#)
- class [FacBomManager](#)
- class [boost::serialization::access](#)

### 32.100.1 Detailed Description

Structure holding the elements of a nesting node. A nesting node is a set of booking classes.

Definition at line 29 of file [NestingNode.hpp](#).

### 32.100.2 Member Typedef Documentation

#### 32.100.2.1 typedef NestingNodeKey stdair::NestingNode::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 39 of file [NestingNode.hpp](#).

### 32.100.3 Constructor & Destructor Documentation

#### 32.100.3.1 stdair::NestingNode::NestingNode (const Key\_T & iKey) [protected]

Main constructor.

Definition at line 31 of file [NestingNode.cpp](#).

#### 32.100.3.2 stdair::NestingNode::~~NestingNode () [protected, virtual]

Destructor.

Definition at line 35 of file [NestingNode.cpp](#).

### 32.100.4 Member Function Documentation

#### 32.100.4.1 const Key\_T& stdair::NestingNode::getKey () const [inline]

Get the policy key.

Definition at line 44 of file [NestingNode.hpp](#).

#### 32.100.4.2 BomAbstract\* const stdair::NestingNode::getParent () const [inline]

Get the parent object.

Definition at line 49 of file [NestingNode.hpp](#).

#### 32.100.4.3 const HolderMap\_T& stdair::NestingNode::getHolderMap () const [inline]

Get the map of children holders.

Definition at line 56 of file [NestingNode.hpp](#).

Referenced by [stdair::FacBomManager::resetYieldBasedNestingStructure\(\)](#).

#### 32.100.4.4 const Yield\_T& stdair::NestingNode::getYield () const [inline]

Getter for the yield.

Definition at line 61 of file [NestingNode.hpp](#).

#### 32.100.4.5 void stdair::NestingNode::setYield (const Yield\_T & iYield) [inline]

Setter for the yield.

Definition at line 68 of file [NestingNode.hpp](#).

Referenced by [stdair::FacBomManager::resetYieldBasedNestingStructure\(\)](#).

#### 32.100.4.6 void stdair::NestingNode::toStream (std::ostream & ioOut) const [inline, virtual]

Dump a Business Object into an output stream.

##### Parameters:

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 80 of file [NestingNode.hpp](#).

References [toString\(\)](#).

#### 32.100.4.7 void stdair::NestingNode::fromStream (std::istream & ioIn) [inline, virtual]

Read a Business Object from an input stream.

##### Parameters:

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 89 of file [NestingNode.hpp](#).

#### 32.100.4.8 std::string stdair::NestingNode::toString () const [virtual]

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 39 of file [NestingNode.cpp](#).

References [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

**32.100.4.9** const std::string stdair::NestingNode::describeKey () const [inline]

Get a string describing the key.

Definition at line 100 of file [NestingNode.hpp](#).

References [stdair::NestingNodeKey::toString\(\)](#).

Referenced by [stdair::FacBomManager::resetYieldBasedNestingStructure\(\)](#), and [toString\(\)](#).

## Friends

- class [boost::serialization::access](#)

### 32.101.1 Detailed Description

Key of a given policy, made of a policy code.

Definition at line 26 of file [NestingNodeKey.hpp](#).

### 32.101.2 Constructor & Destructor Documentation

#### 32.101.2.1 stdair::NestingNodeKey::NestingNodeKey (const NestingNodeCode\_T & iNestingNodeCode)

Constructor.

Definition at line 28 of file [NestingNodeKey.cpp](#).

#### 32.101.2.2 stdair::NestingNodeKey::NestingNodeKey (const NestingNodeKey & iNestingNodeKey)

Copy constructor.

Definition at line 23 of file [NestingNodeKey.cpp](#).

#### 32.101.2.3 stdair::NestingNodeKey::~~NestingNodeKey ()

Destructor.

Definition at line 33 of file [NestingNodeKey.cpp](#).

### 32.101.3 Member Function Documentation

#### 32.101.3.1 const NestingNodeCode\_T& stdair::NestingNodeKey::getNestingNodeCode () const [inline]

Get the policy code.

Definition at line 56 of file [NestingNodeKey.hpp](#).

**32.101.3.2 void stdair::NestingNodeKey::toStream (std::ostream & *ioOut*) const [virtual]**

Dump a Business Object Key into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 37 of file [NestingNodeKey.cpp](#).

References [toString\(\)](#).

**32.101.3.3 void stdair::NestingNodeKey::fromStream (std::istream & *ioIn*) [virtual]**

Read a Business Object Key from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 42 of file [NestingNodeKey.cpp](#).

**32.101.3.4 const std::string stdair::NestingNodeKey::toString () const [virtual]**

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-date.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 46 of file [NestingNodeKey.cpp](#).

Referenced by [stdair::NestingNode::describeKey\(\)](#), and [toStream\(\)](#).

**32.101.3.5 template<class Archive > void stdair::NestingNodeKey::serialize (Archive & *ar*, const unsigned int *iFileVersion*) [inline]**

Serialisation.

Definition at line 68 of file [NestingNodeKey.cpp](#).

**32.101.4 Friends And Related Function Documentation****32.101.4.1 friend class boost::serialization::access [friend]**

Definition at line 27 of file [NestingNodeKey.hpp](#).

### 32.102.1 Detailed Description

Key of a given policy, made of a policy code.

Definition at line 26 of file [NestingStructureKey.hpp](#).

### 32.102.2 Constructor & Destructor Documentation

#### 32.102.2.1 stdair::NestingStructureKey::NestingStructureKey (const NestingStructureCode\_T &iNestingStructureCode)

Constructor.

Definition at line 28 of file [NestingStructureKey.cpp](#).

### 32.102.2.2 stdair::NestingStructureKey::NestingStructureKey (const NestingStructureKey & iNestingStructureKey)

Copy constructor.

Definition at line 23 of file [NestingStructureKey.cpp](#).

### 32.102.2.3 stdair::NestingStructureKey::~~NestingStructureKey ()

Destructor.

Definition at line 33 of file [NestingStructureKey.cpp](#).

## 32.102.3 Member Function Documentation

### 32.102.3.1 const NestingStructureCode\_T& stdair::NestingStructureKey::getNestingStructureCode () const [inline]

Get the nesting structure code.

Definition at line 56 of file [NestingStructureKey.hpp](#).

### 32.102.3.2 void stdair::NestingStructureKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 37 of file [NestingStructureKey.cpp](#).

References [toString\(\)](#).

### 32.102.3.3 void stdair::NestingStructureKey::fromStream (std::istream & ioIn) [virtual]

Read a Business Object Key from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 42 of file [NestingStructureKey.cpp](#).

### 32.102.3.4 const std::string stdair::NestingStructureKey::toString () const [virtual]

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-date.

Reimplemented from [stdair::KeyAbstract](#).

#### 32.112.1 Detailed Description

Class representing the actual attributes for an airline flight-date.

Definition at line 33 of file [OnDDate.hpp](#).

#### 32.112.2 Member Typedef Documentation

##### 32.112.2.1 typedef OnDDateKey stdair::OnDDate::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 44 of file [OnDDate.hpp](#).

#### 32.112.3 Constructor & Destructor Documentation

##### 32.112.3.1 stdair::OnDDate::OnDDate (const Key\_T & iKey) [protected]

Main constructor.

Definition at line 28 of file [OnDDate.cpp](#).

##### 32.112.3.2 stdair::OnDDate::~~OnDDate () [protected, virtual]

Destructor.

Definition at line 33 of file [OnDDate.cpp](#).

### 32.112.4 Member Function Documentation

#### 32.112.4.1 const Key\_T& stdair::OnDDate::getKey () const [inline]

Get the O&D date key.

Definition at line 50 of file [OnDDate.hpp](#).

References [\\_key](#).

#### 32.112.4.2 BomAbstract\* const stdair::OnDDate::getParent () const [inline]

Get the parent object.

Definition at line 55 of file [OnDDate.hpp](#).

References [\\_parent](#).

Referenced by [getAirlineCode\(\)](#).

#### 32.112.4.3 const AirlineCode\_T & stdair::OnDDate::getAirlineCode () const

Get the airline code (key of the parent object).

#### Note:

That method assumes that the parent object derives from the [Inventory](#) class, as it needs to have access to the [getAirlineCode\(\)](#) method.

Definition at line 44 of file [OnDDate.cpp](#).

References [stdair::Inventory::getAirlineCode\(\)](#), and [getParent\(\)](#).

#### 32.112.4.4 const stdair::Date\_T stdair::OnDDate::getDate () const [inline]

Get the boarding date.

Definition at line 70 of file [OnDDate.hpp](#).

References [\\_key](#), and [stdair::OnDDateKey::getDate\(\)](#).

#### 32.112.4.5 const stdair::AirportCode\_T stdair::OnDDate::getOrigin () const [inline]

Get the origin.

Definition at line 75 of file [OnDDate.hpp](#).

References [\\_key](#), and [stdair::OnDDateKey::getOrigin\(\)](#).

#### 32.112.4.6 const stdair::AirportCode\_T stdair::OnDDate::getDestination () const [inline]

Get the destination.

Definition at line 80 of file [OnDDate.hpp](#).

References [\\_key](#), and [stdair::OnDDateKey::getDestination\(\)](#).

**32.112.4.7 const HolderMap\_T& stdair::OnDDate::getHolderMap () const [inline]**

Get the map of children holders.

Definition at line 87 of file [OnDDate.hpp](#).References [\\_holderMap](#).**32.112.4.8 const StringDemandStructMap\_T& stdair::OnDDate::getDemandInfoMap () const [inline]**

Get the map of demand information.

Definition at line 94 of file [OnDDate.hpp](#).References [\\_classPathDemandMap](#).**32.112.4.9 const CabinForecastMap\_T& stdair::OnDDate::getTotalForecastMap () const [inline]**

Get the map of total forecast.

Definition at line 101 of file [OnDDate.hpp](#).References [\\_cabinForecastMap](#).**32.112.4.10 const WTPDemandPair\_T& stdair::OnDDate::getTotalForecast (const CabinCode\_T & iCC) const [inline]**

Get the total forecast for a given cabin.

Definition at line 108 of file [OnDDate.hpp](#).References [\\_cabinForecastMap](#).**32.112.4.11 const CabinClassPairList\_T& stdair::OnDDate::getCabinClassPairList (const std::string & iStr) const [inline]**

Get the cabin-class pair out of a string.

Definition at line 116 of file [OnDDate.hpp](#).References [\\_stringCabinClassPairListMap](#).**32.112.4.12 const short stdair::OnDDate::getNbOfSegments () const [inline]**

Get the number of segments of the O&amp;D.

Definition at line 124 of file [OnDDate.hpp](#).References [\\_key](#), and [stdair::OnDDateKey::getNbOfSegments\(\)](#).**32.112.4.13 void stdair::OnDDate::setDemandInformation (const CabinClassPairList\_T & iCabinClassPairList, const YieldDemandPair\_T & iYieldDemandPair)**

Set demand information.

Definition at line 53 of file [OnDDate.cpp](#).

References [\\_classPathDemandMap](#), and [\\_stringCabinClassPairListMap](#).

**32.112.4.14** void stdair::OnDDate::setTotalForecast (const CabinCode\_T & iCabinCode, const WTPDemandPair\_T & iWTPDemandPair)

Set forecast information per cabin.

Definition at line 76 of file [OnDDate.cpp](#).

References [\\_cabinForecastMap](#).

**32.112.4.15** void stdair::OnDDate::toStream (std::ostream & ioOut) const [inline, virtual]

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 147 of file [OnDDate.hpp](#).

References [toString\(\)](#).

**32.112.4.16** void stdair::OnDDate::fromStream (std::istream & ioIn) [inline, virtual]

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 156 of file [OnDDate.hpp](#).

**32.112.4.17** std::string stdair::OnDDate::toString () const [virtual]

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 37 of file [OnDDate.cpp](#).

References [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

**32.112.4.18** const std::string stdair::OnDDate::describeKey () const [inline]

Get a string describing the key.

Definition at line 167 of file [OnDDate.hpp](#).

References [\\_key](#), and [stdair::OnDDateKey::toString\(\)](#).

Referenced by [toString\(\)](#).

**32.112.4.19** `template<class Archive > void stdair::OnDDate::serialize (Archive & ar, const unsigned int iFileVersion) [inline]`

Serialisation.

## Friends

- class [boost::serialization::access](#)

### 32.113.1 Detailed Description

Key of a given O&D-date, made of a list of OnD strings. a OnD string contains the airline code, the flight number, the date and the segment (origin and destination).

Definition at line 23 of file [OnDDateKey.hpp](#).

### 32.113.2 Constructor & Destructor Documentation

#### 32.113.2.1 stdair::OnDDateKey::OnDDateKey (const OnDStringList\_T & *iOnDStringList*)

Constructor.

Definition at line 33 of file [OnDDateKey.cpp](#).

#### 32.113.2.2 stdair::OnDDateKey::OnDDateKey (const OnDDateKey & *iKey*)

Copy constructor.

Definition at line 38 of file [OnDDateKey.cpp](#).

#### 32.113.2.3 stdair::OnDDateKey::~~OnDDateKey ()

Destructor.

Definition at line 43 of file [OnDDateKey.cpp](#).

### 32.113.3 Member Function Documentation

#### 32.113.3.1 const Date\_T stdair::OnDDateKey::getDate () const

Get the boarding date.

Definition at line 47 of file [OnDDateKey.cpp](#).

References [stdair::BomKeyManager::extractFlightDateKey\(\)](#), and [stdair::FlightDateKey::getDepartureDate\(\)](#).

Referenced by [stdair::OnDDate::getDate\(\)](#).

### 32.113.3.2 const AirportCode\_T stdair::OnDDateKey::getOrigin () const

Get the origin.

Definition at line 54 of file [OnDDateKey.cpp](#).

References [stdair::BomKeyManager::extractSegmentDateKey\(\)](#), and [stdair::SegmentDateKey::getBoardingPoint\(\)](#).

Referenced by [stdair::OnDDate::getOrigin\(\)](#).

### 32.113.3.3 const AirportCode\_T stdair::OnDDateKey::getDestination () const

Get the destination.

Definition at line 61 of file [OnDDateKey.cpp](#).

References [stdair::BomKeyManager::extractSegmentDateKey\(\)](#), and [stdair::SegmentDateKey::getOffPoint\(\)](#).

Referenced by [stdair::OnDDate::getDestination\(\)](#).

### 32.113.3.4 const short stdair::OnDDateKey::getNbOfSegments () const [inline]

Get the number of segments.

Definition at line 70 of file [OnDDateKey.hpp](#).

Referenced by [stdair::OnDDate::getNbOfSegments\(\)](#).

### 32.113.3.5 void stdair::OnDDateKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 68 of file [OnDDateKey.cpp](#).

References [toString\(\)](#).

### 32.113.3.6 void stdair::OnDDateKey::fromStream (std::istream & ioIn) [virtual]

Read a Business Object Key from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 73 of file [OnDDateKey.cpp](#).

**32.113.3.7 const std::string stdair::OnDDateKey::toString () const [virtual]**

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-date.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 77 of file [OnDDateKey.cpp](#).

Referenced by [stdair::OnDDate::describeKey\(\)](#), and [toStream\(\)](#).

**32.113.3.8 template<class Archive > void stdair::OnDDateKey::serialize (Archive & ar, const unsigned int iFileVersion) [inline]**

Serialisation.

Definition at line 102 of file [OnDDateKey.cpp](#).

**32.113.4 Friends And Related Function Documentation****32.113.4.1 friend class boost::serialization::access [friend]**

Definition at line 24 of file [OnDDateKey.hpp](#).

The documentation for this struct was generated from the following files:

#### 32.114.1 Detailed Description

Enumeration of Optimisation methods.

Definition at line 15 of file [OptimisationMethod.hpp](#).

#### 32.114.2 Member Enumeration Documentation

##### 32.114.2.1 enum stdair::OptimisationMethod::EN\_OptimisationMethod

**Enumerator:**

*LEG\_BASED\_MC*  
*LEG\_BASED\_EMSR\_B*  
*LAST\_VALUE*

Definition at line 17 of file [OptimisationMethod.hpp](#).

#### 32.114.3 Constructor & Destructor Documentation

##### 32.114.3.1 stdair::OptimisationMethod::OptimisationMethod (const [EN\\_OptimisationMethod](#) & *iOptimisationMethod*)

Constructor.

Definition at line 36 of file [OptimisationMethod.cpp](#).

##### 32.114.3.2 stdair::OptimisationMethod::OptimisationMethod (const char *iMethod*)

Constructor.

Definition at line 41 of file [OptimisationMethod.cpp](#).

References [describeLabels\(\)](#), [LAST\\_VALUE](#), [LEG\\_BASED\\_EMSR\\_B](#), and [LEG\\_BASED\\_MC](#).

### 32.114.3.3 stdair::OptimisationMethod::OptimisationMethod (const OptimisationMethod & *iOptimisationMethod*)

Default copy constructor.

Definition at line 30 of file [OptimisationMethod.cpp](#).

## 32.114.4 Member Function Documentation

### 32.114.4.1 const std::string & stdair::OptimisationMethod::getLabel (const EN\_OptimisationMethod & *iMethod*) [static]

Get the label as a string (e.g., "Leg based Monte Carlo" or "Leg based EMSRb").

Definition at line 59 of file [OptimisationMethod.cpp](#).

### 32.114.4.2 char stdair::OptimisationMethod::getMethodLabel (const EN\_OptimisationMethod & *iMethod*) [static]

Get the label as a single char (e.g., 'M' or 'E').

Definition at line 64 of file [OptimisationMethod.cpp](#).

### 32.114.4.3 std::string stdair::OptimisationMethod::getMethodLabelAsString (const EN\_OptimisationMethod & *iMethod*) [static]

Get the label as a string of a single char (e.g., "M" or "E").

Definition at line 70 of file [OptimisationMethod.cpp](#).

### 32.114.4.4 std::string stdair::OptimisationMethod::describeLabels () [static]

List the labels.

Definition at line 77 of file [OptimisationMethod.cpp](#).

References [LAST\\_VALUE](#).

Referenced by [OptimisationMethod\(\)](#).

### 32.114.4.5 OptimisationMethod::EN\_OptimisationMethod stdair::OptimisationMethod::getMethod () const

Get the enumerated value.

Definition at line 89 of file [OptimisationMethod.cpp](#).

Referenced by [stdair::AirlineFeature::getOptimisationMethod\(\)](#).

### 32.114.4.6 std::string stdair::OptimisationMethod::getMethodAsString () const

Get the enumerated value as a short string (e.g., "M" or "E").

Definition at line 94 of file [OptimisationMethod.cpp](#).

**32.114.4.7 const std::string stdair::OptimisationMethod::describe () const [virtual]**

Give a description of the structure (e.g., "Leg based Monte Carlo" or "Leg based EMSRb").

Implements [stdair::StructAbstract](#).

Definition at line 101 of file [OptimisationMethod.cpp](#).

**32.114.4.8 bool stdair::OptimisationMethod::operator== (const EN\_OptimisationMethod & iMethod) const**

Comparison operator.

Definition at line 109 of file [OptimisationMethod.cpp](#).

**32.114.4.9 void stdair::StructAbstract::toStream (std::ostream & ioOut) const [inline, inherited]**

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 29 of file [StructAbstract.hpp](#).

References [stdair::StructAbstract::describe\(\)](#).

**32.114.4.10 virtual void stdair::StructAbstract::fromStream (std::istream & ioIn) [inline, virtual, inherited]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented in [stdair::ProgressStatusSet](#), [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::EventStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 38 of file [StructAbstract.hpp](#).

Referenced by [operator>>\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/basic/OptimisationMethod.hpp](#)
- [stdair/basic/OptimisationMethod.cpp](#)

### 32.115 stdair::OptimisationNotificationStruct Struct Reference

`#include <stdair/bom/OptimisationNotificationStruct.hpp>` Inheritance diagram for `stdair::OptimisationNotificationStruct`:

#### Public Member Functions

- `OptimisationNotificationStruct (const OptimisationNotificationStruct &)`
- `~OptimisationNotificationStruct ()`

#### 32.115.1 Detailed Description

Structure holding the elements of a optimisation notification.

Definition at line 19 of file [OptimisationNotificationStruct.hpp](#).

### 32.115.2 Constructor & Destructor Documentation

**32.115.2.1** `stdair::OptimisationNotificationStruct::OptimisationNotificationStruct (const AirportCode_T & iOrigin, const AirportCode_T & iDestination, const CityCode_T & iPOS, const Date_T & iDepartureDate, const DateTime_T & iNotificationDateTime, const CabinCode_T & iPreferredCabin, const NbofSeats_T & iPartySize, const ChannelLabel_T & iChannel, const TripType_T & iTripType, const DayDuration_T & iStayDuration, const FrequentFlyer_T & iFrequentFlyerType, const Duration_T & iPreferredDepartureTime, const WTP_T & iWTP, const PriceValue_T & iValueOfTime)`

Constructor.

Definition at line 39 of file [OptimisationNotificationStruct.cpp](#).

**32.115.2.2** `stdair::OptimisationNotificationStruct::OptimisationNotificationStruct (const OptimisationNotificationStruct & iOptimisationNotification)`

Copy constructor.

Definition at line 20 of file [OptimisationNotificationStruct.cpp](#).

**32.115.2.3** `stdair::OptimisationNotificationStruct::~~OptimisationNotificationStruct ()`

Destructor.

Definition at line 64 of file [OptimisationNotificationStruct.cpp](#).

### 32.115.3 Member Function Documentation

**32.115.3.1** `const AirportCode_T& stdair::OptimisationNotificationStruct::getOrigin () const [inline]`

Get the notificationed origin.

Definition at line 23 of file [OptimisationNotificationStruct.hpp](#).

**32.115.3.2** `const AirportCode_T& stdair::OptimisationNotificationStruct::getDestination () const [inline]`

Get the notificationed destination.

Definition at line 28 of file [OptimisationNotificationStruct.hpp](#).

**32.115.3.3** `const CityCode_T& stdair::OptimisationNotificationStruct::getPOS () const [inline]`

Get the point-of-sale.

Definition at line 33 of file [OptimisationNotificationStruct.hpp](#).

**32.115.3.4** `const Date_T& stdair::OptimisationNotificationStruct::getPreferredDepartureDate ()  
const [inline]`

Get the notificationed departure date.

Definition at line 38 of file [OptimisationNotificationStruct.hpp](#).

**32.115.3.5** `const DateTime_T& stdair::OptimisationNotificationStruct::getNotificationDateTime  
() const [inline]`

Get the notification datetime.

Definition at line 43 of file [OptimisationNotificationStruct.hpp](#).

**32.115.3.6** `const CabinCode_T& stdair::OptimisationNotificationStruct::getPreferredCabin ()  
const [inline]`

Get the preferred cabin.

Definition at line 48 of file [OptimisationNotificationStruct.hpp](#).

**32.115.3.7** `const NbOfSeats_T& stdair::OptimisationNotificationStruct::getPartySize () const  
[inline]`

Get the party size.

Definition at line 53 of file [OptimisationNotificationStruct.hpp](#).

**32.115.3.8** `const ChannelLabel_T&  
stdair::OptimisationNotificationStruct::getOptimisationChannel ()  
const [inline]`

Get the reservation channel.

Definition at line 58 of file [OptimisationNotificationStruct.hpp](#).

**32.115.3.9** `const TripType_T& stdair::OptimisationNotificationStruct::getTripType () const  
[inline]`

Get the trip type.

Definition at line 63 of file [OptimisationNotificationStruct.hpp](#).

**32.115.3.10** `const DayDuration_T& stdair::OptimisationNotificationStruct::getStayDuration ()  
const [inline]`

Get the duration of stay.

Definition at line 68 of file [OptimisationNotificationStruct.hpp](#).

**32.115.3.11** `const FrequentFlyer_T&  
stdair::OptimisationNotificationStruct::getFrequentFlyerType ()  
const [inline]`

Get the frequent flyer type.

Definition at line 73 of file [OptimisationNotificationStruct.hpp](#).

**32.115.3.12** `const Duration_T&  
stdair::OptimisationNotificationStruct::getPreferredDepartureTime  
() const [inline]`

Get the preferred departure time.

Definition at line 78 of file [OptimisationNotificationStruct.hpp](#).

**32.115.3.13** `const WTP_T& stdair::OptimisationNotificationStruct::getWTP () const [inline]`

Get the willingness-to-pay.

Definition at line 83 of file [OptimisationNotificationStruct.hpp](#).

**32.115.3.14** `const PriceValue_T& stdair::OptimisationNotificationStruct::getValueOfTime ()  
const [inline]`

Get the value of time.

Definition at line 88 of file [OptimisationNotificationStruct.hpp](#).

**32.115.3.15** `void stdair::OptimisationNotificationStruct::toStream (std::ostream & ioOut) const`

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 68 of file [OptimisationNotificationStruct.cpp](#).

References [describe\(\)](#).

**32.115.3.16** `void stdair::OptimisationNotificationStruct::fromStream (std::istream & ioIn)  
[virtual]`

Read a Business Object from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 73 of file [OptimisationNotificationStruct.cpp](#).

**32.115.3.17** `const std::string stdair::OptimisationNotificationStruct::describe () const`  
**[virtual]**

Display of the structure.

Implements [stdair::StructAbstract](#).

Definition at line 77 of file [OptimisationNotificationStruct.cpp](#).

Referenced by [toStream\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/OptimisationNotificationStruct.hpp](#)
- [stdair/bom/OptimisationNotificationStruct.cpp](#)

### 32.116.1 Detailed Description

Structure which holds the results/keys after the parsing.

Definition at line 22 of file [ParsedKey.hpp](#).

### 32.116.2 Constructor & Destructor Documentation

#### 32.116.2.1 stdair::ParsedKey::ParsedKey ()

Definition at line 41 of file [ParsedKey.cpp](#).

#### 32.116.2.2 stdair::ParsedKey::~~ParsedKey ()

Definition at line 47 of file [ParsedKey.cpp](#).

### 32.116.3 Member Function Documentation

#### 32.116.3.1 InventoryKey stdair::ParsedKey::getInventoryKey () const

[Inventory](#) key.

Definition at line 51 of file [ParsedKey.cpp](#).

References [\\_airlineCode](#), [\\_fullKey](#), [STDAIR\\_LOG\\_DEBUG](#), [STDAIR\\_LOG\\_ERROR](#), and [toString\(\)](#).

Referenced by [stdair::BomKeyManager::extractInventoryKey\(\)](#).

#### 32.116.3.2 FlightDateKey stdair::ParsedKey::getFlightDateKey () const

Flight-date key.

Definition at line 62 of file [ParsedKey.cpp](#).

References [\\_departureDate](#), [\\_flightNumber](#), [\\_fullKey](#), [STDAIR\\_LOG\\_DEBUG](#), [STDAIR\\_LOG\\_ERROR](#), [stdair::TokeniserDashSeparator\(\)](#), and [toString\(\)](#).

Referenced by [stdair::BomKeyManager::extractFlightDateKey\(\)](#), and [stdair::BomRetriever::retrieveSegmentDateFromLongKey\(\)](#).

#### 32.116.3.3 SegmentDateKey stdair::ParsedKey::getSegmentKey () const

Segment-date key.

Definition at line 98 of file [ParsedKey.cpp](#).

References [\\_boardingPoint](#), [\\_fullKey](#), [\\_offPoint](#), [STDAIR\\_LOG\\_DEBUG](#), [STDAIR\\_LOG\\_ERROR](#), and [toString\(\)](#).

Referenced by [stdair::BomKeyManager::extractSegmentDateKey\(\)](#), and [stdair::BomRetriever::retrieveSegmentDateFromLongKey\(\)](#).

**32.116.3.4 LegDateKey stdair::ParsedKey::getLegKey () const**

Leg-date key.

Definition at line 84 of file [ParsedKey.cpp](#).References [\\_boardingPoint](#), [\\_fullKey](#), [STDAIR\\_LOG\\_DEBUG](#), [STDAIR\\_LOG\\_ERROR](#), and [toString\(\)](#).Referenced by [stdair::BomKeyManager::extractLegDateKey\(\)](#).**32.116.3.5 const Duration\_T stdair::ParsedKey::getBoardingTime () const**

Boarding time.

Definition at line 112 of file [ParsedKey.cpp](#).References [\\_boardingTime](#), [\\_fullKey](#), [STDAIR\\_LOG\\_DEBUG](#), [STDAIR\\_LOG\\_ERROR](#), [stdair::TokeniserTimeSeparator\(\)](#), and [toString\(\)](#).**32.116.3.6 void stdair::ParsedKey::toStream (std::ostream & ioOut) const [virtual]**

Dump a Business Object Key into an output stream.

**Parameters:***ostream&* the output stream.Reimplemented from [stdair::KeyAbstract](#).Definition at line 130 of file [ParsedKey.cpp](#).References [toString\(\)](#).**32.116.3.7 void stdair::ParsedKey::fromStream (std::istream & ioIn) [virtual]**

Read a Business Object Key from an input stream.

**Parameters:***istream&* the input stream.Reimplemented from [stdair::KeyAbstract](#).Definition at line 135 of file [ParsedKey.cpp](#).**32.116.3.8 const std::string stdair::ParsedKey::toString () const [virtual]**

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-date.

Reimplemented from [stdair::KeyAbstract](#).Definition at line 139 of file [ParsedKey.cpp](#).

References [\\_airlineCode](#), [\\_boardingPoint](#), [\\_boardingTime](#), [\\_departureDate](#), [\\_flightNumber](#), [\\_offPoint](#), [stdair::DEFAULT\\_KEY\\_FLD\\_DELIMITER](#), and [stdair::DEFAULT\\_KEY\\_SUB\\_FLD\\_DELIMITER](#).

Definition at line 19 of file [PartnershipTechnique.hpp](#).

### 32.119.3 Constructor & Destructor Documentation

#### 32.119.3.1 stdair::PartnershipTechnique::PartnershipTechnique (const EN\_PartnershipTechnique & *iPartnershipTechnique*)

Main constructor.

Definition at line 48 of file [PartnershipTechnique.cpp](#).

#### 32.119.3.2 stdair::PartnershipTechnique::PartnershipTechnique (const char *iTechnique*)

Alternative constructor.

Definition at line 82 of file [PartnershipTechnique.cpp](#).

#### 32.119.3.3 stdair::PartnershipTechnique::PartnershipTechnique (const std::string & *iTechnique*)

Alternative constructor.

Definition at line 88 of file [PartnershipTechnique.cpp](#).

References [getTechnique\(\)](#).

#### 32.119.3.4 stdair::PartnershipTechnique::PartnershipTechnique (const PartnershipTechnique & *iPartnershipTechnique*)

Default copy constructor.

Definition at line 42 of file [PartnershipTechnique.cpp](#).

### 32.119.4 Member Function Documentation

#### 32.119.4.1 const std::string & stdair::PartnershipTechnique::getLabel (const EN\_PartnershipTechnique & *iTechnique*) [static]

Get the label as a string (e.g., "RevenueManagementCooperation").

Definition at line 98 of file [PartnershipTechnique.cpp](#).

#### 32.119.4.2 PartnershipTechnique::EN\_PartnershipTechnique stdair::PartnershipTechnique::getTechnique (const char *iTechniqueChar*) [static]

Get the technique value from parsing a single char (e.g., 'r' or 'C').

Definition at line 54 of file [PartnershipTechnique.cpp](#).

References [A\\_RMC](#), [describeLabels\(\)](#), [IBP\\_DA](#), [IBP\\_YP](#), [IBP\\_YP\\_U](#), [LAST\\_VALUE](#), [NONE](#), [RAE\\_DA](#), [RAE\\_YP](#), and [RMC](#).

Referenced by [stdair::AirlineFeature::getPartnershipTechnique\(\)](#).

**32.119.4.3 char stdair::PartnershipTechnique::getTechniqueLabel (const EN\_PartnershipTechnique & *iTechnique*) [static]**

Get the label as a single char (e.g., 'r' or 'C').

Definition at line 104 of file [PartnershipTechnique.cpp](#).

**32.119.4.4 std::string stdair::PartnershipTechnique::getTechniqueLabelAsString (const EN\_PartnershipTechnique & *iTechnique*) [static]**

Get the label as a string of a single char (e.g., "r" or "C").

Definition at line 110 of file [PartnershipTechnique.cpp](#).

**32.119.4.5 std::string stdair::PartnershipTechnique::describeLabels () [static]**

List the labels.

Definition at line 117 of file [PartnershipTechnique.cpp](#).

References [LAST\\_VALUE](#).

Referenced by [getTechnique\(\)](#).

**32.119.4.6 PartnershipTechnique::EN\_PartnershipTechnique stdair::PartnershipTechnique::getTechnique () const**

Get the enumerated value.

Definition at line 130 of file [PartnershipTechnique.cpp](#).

Referenced by [PartnershipTechnique\(\)](#).

**32.119.4.7 char stdair::PartnershipTechnique::getTechniqueAsChar () const**

Get the enumerated value as a char (e.g., 'r' or 'C').

Definition at line 135 of file [PartnershipTechnique.cpp](#).

**32.119.4.8 std::string stdair::PartnershipTechnique::getTechniqueAsString () const**

Get the enumerated value as a short string (e.g., "r" or "C").

Definition at line 141 of file [PartnershipTechnique.cpp](#).

**32.119.4.9 const std::string stdair::PartnershipTechnique::describe () const [virtual]**

Give a description of the structure (e.g., "RevenueManagementCooperation" or "InterlineBidPriceYieldProration").

Implements [stdair::StructAbstract](#).

Definition at line 148 of file [PartnershipTechnique.cpp](#).

**32.119.4.10** `bool stdair::PartnershipTechnique::operator==(const EN_PartnershipTechnique & iTechnique) const`

Comparison operator.

Definition at line 156 of file [PartnershipTechnique.cpp](#).

**32.119.4.11** `void stdair::StructAbstract::toStream (std::ostream & ioOut) const [inline, inherited]`

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

### 32.120.1 Detailed Description

Enumeration of passenger choice models.

Definition at line 15 of file [PassengerChoiceModel.hpp](#).

### 32.120.2 Member Enumeration Documentation

#### 32.120.2.1 enum stdair::PassengerChoiceModel::EN\_PassengerChoiceModel

#### Enumerator:

***HARD\_RESTRICTION***  
***PRICE\_ORIENTED***  
***HYBRID***  
***LAST\_VALUE***

Definition at line 17 of file [PassengerChoiceModel.hpp](#).

### 32.120.3 Constructor & Destructor Documentation

#### 32.120.3.1 stdair::PassengerChoiceModel::PassengerChoiceModel (const EN\_PassengerChoiceModel & *iPassengerChoiceModel*)

Constructor.

Definition at line 36 of file [PassengerChoiceModel.cpp](#).

#### 32.120.3.2 stdair::PassengerChoiceModel::PassengerChoiceModel (const char *iModel*)

Constructor.

Definition at line 41 of file [PassengerChoiceModel.cpp](#).

References [describeLabels\(\)](#), [HARD\\_RESTRICTION](#), [HYBRID](#), [LAST\\_VALUE](#), and [PRICE\\_ORIENTED](#).

#### 32.120.3.3 stdair::PassengerChoiceModel::PassengerChoiceModel (const PassengerChoiceModel & *iPassengerChoiceModel*)

Default copy constructor.

Definition at line 30 of file [PassengerChoiceModel.cpp](#).

### 32.120.4 Member Function Documentation

#### 32.120.4.1 const std::string & stdair::PassengerChoiceModel::getLabel (const EN\_PassengerChoiceModel & *iModel*) [static]

Get the label as a string (e.g., "HardRestrictionModel", "PriceOrientedModel" or "HybridModel").

Definition at line 60 of file [PassengerChoiceModel.cpp](#).

#### 32.120.4.2 char stdair::PassengerChoiceModel::getModelLabel (const EN\_PassengerChoiceModel & *iModel*) [static]

Get the label as a single char (e.g., 'R', 'P' or 'H').

Definition at line 65 of file [PassengerChoiceModel.cpp](#).

#### 32.120.4.3 std::string stdair::PassengerChoiceModel::getModelLabelAsString (const EN\_PassengerChoiceModel & *iModel*) [static]

Get the label as a string of a single char (e.g., "R", "P" or "H").

Definition at line 71 of file [PassengerChoiceModel.cpp](#).

#### 32.120.4.4 std::string stdair::PassengerChoiceModel::describeLabels () [static]

List the labels.

Definition at line 78 of file [PassengerChoiceModel.cpp](#).

References [LAST\\_VALUE](#).

Referenced by [PassengerChoiceModel\(\)](#).

#### 32.120.4.5 PassengerChoiceModel::EN\_PassengerChoiceModel stdair::PassengerChoiceModel::getModel () const

Get the enumerated value.

Definition at line 90 of file [PassengerChoiceModel.cpp](#).

#### 32.120.4.6 std::string stdair::PassengerChoiceModel::getModelAsString () const

Get the enumerated value as a short string (e.g., "R", "P" or "H").

Definition at line 95 of file [PassengerChoiceModel.cpp](#).

#### 32.120.4.7 const std::string stdair::PassengerChoiceModel::describe () const [virtual]

Give a description of the structure (e.g., HardRestrictionModel", "PriceOrientedModel" or "HybridModel).

Implements [stdair::StructAbstract](#).

Definition at line 102 of file [PassengerChoiceModel.cpp](#).

#### 32.120.4.8 bool stdair::PassengerChoiceModel::operator== (const EN\_PassengerChoiceModel & iModel) const

Comparison operator.

Definition at line 110 of file [PassengerChoiceModel.cpp](#).

#### 32.120.4.9 void stdair::StructAbstract::toStream (std::ostream & ioOut) const [inline, inherited]

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 29 of file [StructAbstract.hpp](#).

References [stdair::StructAbstract::describe\(\)](#).

#### 32.120.4.10 virtual void stdair::StructAbstract::fromStream (std::istream & *ioIn*) [inline, virtual, inherited]

Read a Business Object from an input stream.

##### Parameters:

*istream&* the input stream.

Reimplemented in [stdair::ProgressStatusSet](#), [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::EventStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 38 of file [StructAbstract.hpp](#).

Referenced by [operator>>\(\)](#).

Get the label as a single char (e.g., 'L' or 'B').

Definition at line 55 of file [PassengerType.cpp](#).

**32.121.4.4** `std::string stdair::PassengerType::describeLabels () [static]`

List the labels.

Definition at line 62 of file [PassengerType.cpp](#).

References [LAST\\_VALUE](#).

Referenced by [PassengerType\(\)](#).

**32.121.4.5** `PassengerType::EN_PassengerType stdair::PassengerType::getType () const`

Get the enumerated value.

Definition at line 74 of file [PassengerType.cpp](#).

**32.121.4.6** `std::string stdair::PassengerType::getTypeAsString () const`

Get the enumerated value as a short string (e.g., 'L' or 'B').

Definition at line 79 of file [PassengerType.cpp](#).

**32.121.4.7** `const std::string stdair::PassengerType::describe () const [virtual]`

Give a description of the structure (e.g., "Leisure" or "Business").

Implements [stdair::StructAbstract](#).

Definition at line 86 of file [PassengerType.cpp](#).

**32.121.4.8** `bool stdair::PassengerType::operator== (const EN_PassengerType & iType) const`

Comparison operator.

Definition at line 93 of file [PassengerType.cpp](#).

**32.121.4.9** `void stdair::StructAbstract::toStream (std::ostream & ioOut) const [inline, inherited]`

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 29 of file [StructAbstract.hpp](#).

References [stdair::StructAbstract::describe\(\)](#).

#### 32.121.4.10 virtual void stdair::StructAbstract::fromStream (std::istream & *ioIn*) [[inline](#), [virtual](#), [inherited](#)]

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented in [stdair::ProgressStatusSet](#), [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::EventStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 38 of file [StructAbstract.hpp](#).

Referenced by [operator>>\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/basic/PassengerType.hpp](#)
- [stdair/basic/PassengerType.cpp](#)

## 32.122 stdair::PeriodStruct Struct Reference

`#include <stdair/bom/PeriodStruct.hpp>`Inheritance diagram for `stdair::PeriodStruct`:

**Public Member Functions**

- const [DatePeriod\\_T](#) & [getDateRange](#) () const

- [PeriodStruct](#) ()
- [PeriodStruct](#) (const [PeriodStruct](#) &)
- [~PeriodStruct](#) ()
- void [toStream](#) (std::ostream &ioOut) const
- virtual void [fromStream](#) (std::istream &ioIn)

### 32.122.1 Detailed Description

Define a departure period

A period is defined by a date range and a day-of-week struct.

Definition at line 19 of file [PeriodStruct.hpp](#).

### 32.122.2 Constructor & Destructor Documentation

#### 32.122.2.1 stdair::PeriodStruct::PeriodStruct (const DatePeriod\_T & iDateRange, const DoWStruct & iDoW)

Constructor.

Definition at line 19 of file [PeriodStruct.cpp](#).

#### 32.122.2.2 stdair::PeriodStruct::PeriodStruct ()

Default constructors.

Definition at line 14 of file [PeriodStruct.cpp](#).

Referenced by [addDateOffset\(\)](#), and [intersection\(\)](#).

#### 32.122.2.3 stdair::PeriodStruct::PeriodStruct (const PeriodStruct & iPeriodStruct)

Definition at line 25 of file [PeriodStruct.cpp](#).

#### 32.122.2.4 stdair::PeriodStruct::~PeriodStruct () [inline]

Default destructor.

Definition at line 64 of file [PeriodStruct.hpp](#).

### 32.122.3 Member Function Documentation

#### 32.122.3.1 const DatePeriod\_T& stdair::PeriodStruct::getDateRange () const [inline]

Retrieve the attributes.

Definition at line 23 of file [PeriodStruct.hpp](#).

Referenced by [addDateOffset\(\)](#).

#### 32.122.3.2 const DoWStruct& stdair::PeriodStruct::getDoW () const [inline]

Definition at line 26 of file [PeriodStruct.hpp](#).

Referenced by [addDateOffset\(\)](#).

#### 32.122.3.3 void stdair::PeriodStruct::setDateRange (const DatePeriod\_T & iDateRange) [inline]

Set the new value for the attributes.

Definition at line 33 of file [PeriodStruct.hpp](#).

#### 32.122.3.4 void stdair::PeriodStruct::setDoW (const DoWStruct & iDoW) [inline]

Definition at line 36 of file [PeriodStruct.hpp](#).

#### 32.122.3.5 const std::string stdair::PeriodStruct::describe () const [virtual]

Display explicitly (e.g., "Mon.Tue.Wed.Thu.Fri").

Implements [stdair::StructAbstract](#).

Definition at line 38 of file [PeriodStruct.cpp](#).

References [stdair::DoWStruct::describe\(\)](#).

#### 32.122.3.6 const std::string stdair::PeriodStruct::describeShort () const

Display as a bit set (e.g., "1111100").

Definition at line 31 of file [PeriodStruct.cpp](#).

References [stdair::DoWStruct::describeShort\(\)](#).

Referenced by [stdair::FlightPeriodKey::toString\(\)](#).

#### 32.122.3.7 PeriodStruct stdair::PeriodStruct::addDateOffset (const DateOffset\_T & iDateOffset) const

Build a period struct from this period struct by adding a date offset.

Definition at line 46 of file [PeriodStruct.cpp](#).

References [getDateRange\(\)](#), [getDoW\(\)](#), [PeriodStruct\(\)](#), and [stdair::DoWStruct::shift\(\)](#).

### 32.122.3.8 PeriodStruct stdair::PeriodStruct::intersection (const PeriodStruct & iPeriodStruct) const

Build a new period struct which is the intersection of two period structs.

Definition at line 63 of file [PeriodStruct.cpp](#).

References [stdair::DoWStruct::intersection\(\)](#), and [PeriodStruct\(\)](#).

### 32.122.3.9 const bool stdair::PeriodStruct::isValid () const

Return if the period is valid (i.e., valid date range and valid DoW).

Definition at line 72 of file [PeriodStruct.cpp](#).

References [stdair::DoWStruct::isValid\(\)](#).

### 32.122.3.10 void stdair::StructAbstract::toStream (std::ostream & ioOut) const [inline, inherited]

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 29 of file [StructAbstract.hpp](#).

References [stdair::StructAbstract::describe\(\)](#).

### 32.122.3.11 virtual void stdair::StructAbstract::fromStream (std::istream & ioIn) [inline, virtual, inherited]

Read a Business Object from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented in [stdair::ProgressStatusSet](#), [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::EventStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 38 of file [StructAbstract.hpp](#).

Referenced by [operator>>\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/PeriodStruct.hpp](#)
- [stdair/bom/PeriodStruct.cpp](#)

## 32.123 stdair::Policy Class Reference

`#include <stdair/bom/Policy.hpp>`Inheritance diagram for `stdair::Policy`:

### Public Types

- typedef [PolicyKey](#) [Key\\_T](#)

### Public Member Functions

- const [Key\\_T](#) & [getKey](#) () const
- [BomAbstract](#) \*const [getParent](#) () const
- const [HolderMap\\_T](#) & [getHolderMap](#) () const
- const [BookingClassList\\_T](#) & [getBookingClassList](#) () const
- const [NbOfBookings\\_T](#) & [getDemand](#) () const
- const [StdDevValue\\_T](#) & [getStdDev](#) () const

- void [setStdDev](#) (const [StdDevValue\\_T](#) & iStdDev)
- void [setYield](#) (const [Yield\\_T](#) & iYield)
- void [resetDemandForecast](#) ()
- void [addYieldDemand](#) (const [Yield\\_T](#) &, const [NbOfBookings\\_T](#) &)
- void [toStream](#) (std::ostream & ioOut) const
- void [fromStream](#) (std::istream & ioIn)
- std::string [toString](#) () const
- const std::string [describeKey](#) () const
- template<class Archive >  
void [serialize](#) (Archive & ar, const unsigned int iFileVersion)

### Protected Member Functions

- [Policy](#) (const [Key\\_T](#) &)
- virtual [~Policy](#) ()

## Friends

- class [FacBom](#)
- class [FacBomManager](#)
- class [boost::serialization::access](#)

### 32.123.1 Detailed Description

Structure holding the elements of a policy. A policy is a set of booking classes, each booking class belongs to a different Fare Family.

Definition at line 30 of file [Policy.hpp](#).

### 32.123.2 Member Typedef Documentation

#### 32.123.2.1 typedef PolicyKey stdair::Policy::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 40 of file [Policy.hpp](#).

### 32.123.3 Constructor & Destructor Documentation

#### 32.123.3.1 stdair::Policy::Policy (const Key\_T & iKey) [protected]

Main constructor.

Definition at line 31 of file [Policy.cpp](#).

#### 32.123.3.2 stdair::Policy::~Policy () [protected, virtual]

Destructor.

Definition at line 35 of file [Policy.cpp](#).

### 32.123.4 Member Function Documentation

#### 32.123.4.1 const Key\_T& stdair::Policy::getKey () const [inline]

Get the policy key.

Definition at line 45 of file [Policy.hpp](#).

#### 32.123.4.2 BomAbstract\* const stdair::Policy::getParent () const [inline]

Get the parent object.

Definition at line 50 of file [Policy.hpp](#).

**32.123.4.3 const HolderMap\_T& stdair::Policy::getHolderMap () const [inline]**

Get the map of children holders.

Definition at line 57 of file [Policy.hpp](#).

**32.123.4.4 const BookingClassList\_T & stdair::Policy::getBookingClassList () const**

Getter for the booking classes.

Definition at line 52 of file [Policy.cpp](#).

**32.123.4.5 const NbOfBookings\_T& stdair::Policy::getDemand () const [inline]**

Getter for the demand.

Definition at line 65 of file [Policy.hpp](#).

**32.123.4.6 const StdDevValue\_T& stdair::Policy::getStdDev () const [inline]**

Getter for the standard deviation demand.

Definition at line 70 of file [Policy.hpp](#).

**32.123.4.7 const Yield\_T& stdair::Policy::getYield () const [inline]**

Getter for the yield.

Definition at line 75 of file [Policy.hpp](#).

**32.123.4.8 const Revenue\_T stdair::Policy::getTotalRevenue () const**

Get the total revenue of the policy.

Definition at line 57 of file [Policy.cpp](#).

**32.123.4.9 void stdair::Policy::setDemand (const NbOfBookings\_T & *iDemand*) [inline]**

Setter for the unconstraining demand.

Definition at line 85 of file [Policy.hpp](#).

**32.123.4.10 void stdair::Policy::setStdDev (const StdDevValue\_T & *iStdDev*) [inline]**

Setter for standard deviation demand.

Definition at line 90 of file [Policy.hpp](#).

**32.123.4.11 void stdair::Policy::setYield (const Yield\_T & *iYield*) [inline]**

Setter for the yield.

Definition at line 95 of file [Policy.hpp](#).

**32.123.4.12 void stdair::Policy::resetDemandForecast () [inline]**

Reset demand forecast.

Definition at line 100 of file [Policy.hpp](#).

**32.123.4.13 void stdair::Policy::addYieldDemand (const Yield\_T & iYield, const NbOfBookings\_T & iDemand)**

Add the new pair (yield, demand) to the map.

Definition at line 70 of file [Policy.cpp](#).

**32.123.4.14 void stdair::Policy::toStream (std::ostream & ioOut) const [inline, virtual]**

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 116 of file [Policy.hpp](#).

References [toString\(\)](#).

**32.123.4.15 void stdair::Policy::fromStream (std::istream & ioIn) [inline, virtual]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 125 of file [Policy.hpp](#).

**32.123.4.16 std::string stdair::Policy::toString () const [virtual]**

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 39 of file [Policy.cpp](#).

References [describeKey\(\)](#).

Referenced by [stdair::SegmentCabin::describeConvexHull\(\)](#), and [toStream\(\)](#).

**32.123.4.17 const std::string stdair::Policy::describeKey () const [inline]**

Get a string describing the key.

Definition at line 136 of file [Policy.hpp](#).

References [stdair::PolicyKey::toString\(\)](#).

Referenced by [toString\(\)](#).

**32.123.4.18** `template<class Archive > void stdair::Policy::serialize (Archive & ar, const unsigned int iFileVersion) [inline]`

Serialisation.

## 32.123.5 Friends And Related Function Documentation

### 32.123.5.1 friend class FacBom [friend]

Definition at line 31 of file [Policy.hpp](#).

### 32.123.5.2 friend class FacBomManager [friend]

Definition at line 32 of file [Policy.hpp](#).

### 32.123.5.3 friend class boost::serialization::access [friend]

Definition at line 33 of file [Policy.hpp](#).

The documentation for this class was generated from the following files:

- [stdair/bom/Policy.hpp](#)
- [stdair/bom/Policy.cpp](#)

## 32.124 stdair::PolicyKey Struct Reference

Key of a given policy, made of a policy code.

`#include <stdair/bom/PolicyKey.hpp>`Inheritance diagram for stdair::PolicyKey::

### Public Member Functions

- [PolicyKey](#) (const [PolicyCode\\_T](#) &iPolicyCode)
- [PolicyKey](#) (const [PolicyKey](#) &)
- [~PolicyKey](#) ()

- const [PolicyCode\\_T](#) & [getPolicyCode](#) () const
- void [toStream](#) (std::ostream &ioOut) const
- void [fromStream](#) (std::istream &ioIn)
- const std::string [toString](#) () const
- template<class Archive >  
void [serialize](#) (Archive &ar, const unsigned int iFileVersion)

## Friends

- class [boost::serialization::access](#)

### 32.124.1 Detailed Description

Key of a given policy, made of a policy code.

Definition at line 26 of file [PolicyKey.hpp](#).

### 32.124.2 Constructor & Destructor Documentation

#### 32.124.2.1 stdair::PolicyKey::PolicyKey (const PolicyCode\_T & iPolicyCode)

Constructor.

Definition at line 28 of file [PolicyKey.cpp](#).

#### 32.124.2.2 stdair::PolicyKey::PolicyKey (const PolicyKey & iPolicyKey)

Copy constructor.

Definition at line 23 of file [PolicyKey.cpp](#).

#### 32.124.2.3 stdair::PolicyKey::~~PolicyKey ()

Destructor.

Definition at line 33 of file [PolicyKey.cpp](#).

### 32.124.3 Member Function Documentation

#### 32.124.3.1 const PolicyCode\_T& stdair::PolicyKey::getPolicyCode () const [inline]

Get the policy code.

Definition at line 56 of file [PolicyKey.hpp](#).

#### 32.124.3.2 void stdair::PolicyKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

## Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 37 of file [PolicyKey.cpp](#).

References [toString\(\)](#).

### 32.124.3.3 void stdair::PolicyKey::fromStream (std::istream & *ioIn*) [virtual]

Read a Business Object Key from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 42 of file [PolicyKey.cpp](#).

### 32.124.3.4 const std::string stdair::PolicyKey::toString () const [virtual]

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-date.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 46 of file [PolicyKey.cpp](#).

Referenced by [stdair::Policy::describeKey\(\)](#), and [toStream\(\)](#).

### 32.124.3.5 template<class Archive > void stdair::PolicyKey::serialize (Archive & *ar*, const unsigned int *iFileVersion*) [inline]

Serialisation.

Definition at line 68 of file [PolicyKey.cpp](#).

## 32.124.4 Friends And Related Function Documentation

### 32.124.4.1 friend class boost::serialization::access [friend]

Definition at line 27 of file [PolicyKey.hpp](#).

Definition at line 19 of file [PosChannel.hpp](#).

### 32.125.2 Member Typedef Documentation

#### 32.125.2.1 typedef PosChannelKey stdair::PosChannel::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 29 of file [PosChannel.hpp](#).

### 32.125.3 Constructor & Destructor Documentation

#### 32.125.3.1 stdair::PosChannel::PosChannel (const Key\_T & iKey) [protected]

Main constructor.

Definition at line 28 of file [PosChannel.cpp](#).

#### 32.125.3.2 stdair::PosChannel::~PosChannel () [protected, virtual]

Destructor.

Definition at line 33 of file [PosChannel.cpp](#).

### 32.125.4 Member Function Documentation

#### 32.125.4.1 void stdair::PosChannel::toStream (std::ostream & ioOut) const [inline, virtual]

Dump a Business Object into an output stream.

##### Parameters:

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 38 of file [PosChannel.hpp](#).

References [toString\(\)](#).

#### 32.125.4.2 void stdair::PosChannel::fromStream (std::istream & ioIn) [inline, virtual]

Read a Business Object from an input stream.

##### Parameters:

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 47 of file [PosChannel.hpp](#).

**32.125.4.3 std::string stdair::PosChannel::toString () const [virtual]**

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 37 of file [PosChannel.cpp](#).

References [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

**32.125.4.4 const std::string stdair::PosChannel::describeKey () const [inline]**

Get a string describing the key.

Definition at line 58 of file [PosChannel.hpp](#).

References [\\_key](#), and [stdair::PosChannelKey::toString\(\)](#).

Referenced by [toString\(\)](#).

**32.125.4.5 const Key\_T& stdair::PosChannel::getKey () const [inline]**

Get the primary key (pos, channel).

Definition at line 67 of file [PosChannel.hpp](#).

References [\\_key](#).

**32.125.4.6 BomAbstract\* const stdair::PosChannel::getParent () const [inline]**

Get a reference on the parent object instance.

Definition at line 74 of file [PosChannel.hpp](#).

References [\\_parent](#).

**32.125.4.7 const stdair::HolderMap\_T& stdair::PosChannel::getHolderMap () const [inline]**

Get a reference on the children holder.

Definition at line 81 of file [PosChannel.hpp](#).

References [\\_holderMap](#).

**32.125.4.8 const CityCode\_T& stdair::PosChannel::getPos () const [inline]**

Get the point-of-sale.

Definition at line 88 of file [PosChannel.hpp](#).

References [\\_key](#), and [stdair::PosChannelKey::getPos\(\)](#).

**32.125.4.9 const ChannelLabel\_T& stdair::PosChannel::getChannel () const [inline]**

Get the channel.

Definition at line 95 of file [PosChannel.hpp](#).

References [\\_key](#), and [stdair::PosChannelKey::getChannel\(\)](#).

### 32.125.5 Friends And Related Function Documentation

Definition at line 15 of file [PosChannelKey.hpp](#).

### 32.126.2 Constructor & Destructor Documentation

#### 32.126.2.1 stdair::PosChannelKey::PosChannelKey (const stdair::CityCode\_T & *iPos*, const stdair::ChannelLabel\_T & *iChannel*)

Main constructor.

Definition at line 22 of file [PosChannelKey.cpp](#).

#### 32.126.2.2 stdair::PosChannelKey::PosChannelKey (const PosChannelKey & *iKey*)

Copy constructor.

Definition at line 28 of file [PosChannelKey.cpp](#).

#### 32.126.2.3 stdair::PosChannelKey::~~PosChannelKey ()

Destructor.

Definition at line 33 of file [PosChannelKey.cpp](#).

### 32.126.3 Member Function Documentation

#### 32.126.3.1 const stdair::CityCode\_T& stdair::PosChannelKey::getPos () const [inline]

Get the point of sale.

Definition at line 43 of file [PosChannelKey.hpp](#).

Referenced by [stdair::PosChannel::getPos\(\)](#).

#### 32.126.3.2 const stdair::ChannelLabel\_T& stdair::PosChannelKey::getChannel () const [inline]

Get the channel.

Definition at line 50 of file [PosChannelKey.hpp](#).

Referenced by [stdair::PosChannel::getChannel\(\)](#).

#### 32.126.3.3 void stdair::PosChannelKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

##### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 37 of file [PosChannelKey.cpp](#).

References [toString\(\)](#).

#### 32.126.3.4 void stdair::PosChannelKey::fromStream (std::istream & ioIn) [virtual]

Read a Business Object Key from an input stream.

##### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 42 of file [PosChannelKey.cpp](#).

#### 32.126.3.5 const std::string stdair::PosChannelKey::toString () const [virtual]

Get the serialised version of the Business Object Key. That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 46 of file [PosChannelKey.cpp](#).

References [stdair::DEFAULT\\_KEY\\_SUB\\_FLD\\_DELIMITER](#).

Referenced by [stdair::PosChannel::describeKey\(\)](#), and [toStream\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/PosChannelKey.hpp](#)
- [stdair/bom/PosChannelKey.cpp](#)

## 32.127 stdair::PreOptimisationMethod Struct Reference

`#include <stdair/basic/PreOptimisationMethod.hpp>` **Inheritance diagram for stdair::PreOptimisationMethod:**

### Public Types

- `ProgressStatus` (const `ProgressStatus` &)
- void `toStream` (std::ostream &ioOut) const
- virtual void `fromStream` (std::istream &ioIn)

### 32.128.1 Detailed Description

Structure holding the details of a progress status.

The progress status is given by the ratio between the "current" and the "expected" (or "actual") numbers. For instance, when the expected/actual number is 1000 and the current number is 200, then the progress status is 20% (= 200 / 1000).

Definition at line 27 of file [ProgressStatus.hpp](#).

### 32.128.2 Constructor & Destructor Documentation

#### 32.128.2.1 stdair::ProgressStatus::ProgressStatus (const Count\_T &iCurrentNb, const Count\_T &iExpectedNb, const Count\_T &iActualNb)

Constructor.

##### Parameters:

- `const Count_T&` The current number.
- `const Count_T&` The expected number.
- `const Count_T&` The actual number.

Definition at line 15 of file [ProgressStatus.cpp](#).

#### 32.128.2.2 stdair::ProgressStatus::ProgressStatus (const Count\_T &iExpectedNb, const Count\_T &iActualNb)

Constructor.

As no current number is given, it is set to 0.

##### Parameters:

- `const Count_T&` The expected number.
- `const Count_T&` The actual number.

Definition at line 23 of file [ProgressStatus.cpp](#).

### 32.128.2.3 `stdair::ProgressStatus::ProgressStatus (const Count_T & iActualNb)`

Constructor.

As no expected number is given, it is assumed to be equal to the actual one. The current number is set to 0.

#### Parameters:

*const* Count\_T& The actual number.

Definition at line 30 of file [ProgressStatus.cpp](#).

### 32.128.2.4 `stdair::ProgressStatus::ProgressStatus ()`

Constructor.

All the numbers are set to 0.

Definition at line 36 of file [ProgressStatus.cpp](#).

### 32.128.2.5 `stdair::ProgressStatus::ProgressStatus (const ProgressStatus & iProgressStatus)`

Copy Constructor.

Definition at line 43 of file [ProgressStatus.cpp](#).

## 32.128.3 Member Function Documentation

### 32.128.3.1 `const Count_T& stdair::ProgressStatus::count () const [inline]`

Get the current number.

Definition at line 31 of file [ProgressStatus.hpp](#).

### 32.128.3.2 `const Count_T& stdair::ProgressStatus::getCurrentNb () const [inline]`

Get the current number.

Definition at line 36 of file [ProgressStatus.hpp](#).

Referenced by [stdair::ProgressStatusSet::describe\(\)](#).

### 32.128.3.3 `const Count_T& stdair::ProgressStatus::getExpectedNb () const [inline]`

Get the expected number.

Definition at line 41 of file [ProgressStatus.hpp](#).

Referenced by [stdair::ProgressStatusSet::describe\(\)](#).

### 32.128.3.4 `const Count_T& stdair::ProgressStatus::getActualNb () const [inline]`

Get the actual number.

Definition at line 46 of file [ProgressStatus.hpp](#).

Referenced by [stdair::ProgressStatusSet::describe\(\)](#).

### 32.128.3.5 const ProgressPercentage\_T stdair::ProgressStatus::progress () const [inline]

Get the progress as a percentage.

Definition at line 51 of file [ProgressStatus.hpp](#).

References [stdair::MAXIMUM\\_PROGRESS\\_STATUS](#).

Referenced by [toString\(\)](#).

### 32.128.3.6 void stdair::ProgressStatus::setCurrentNb (const Count\_T & iCurrentNb) [inline]

Set the current number.

Definition at line 65 of file [ProgressStatus.hpp](#).

### 32.128.3.7 void stdair::ProgressStatus::setExpectedNb (const Count\_T & iExpectedNb) [inline]

Set the expected number.

Definition at line 70 of file [ProgressStatus.hpp](#).

### 32.128.3.8 void stdair::ProgressStatus::setActualNb (const Count\_T & iActualNb) [inline]

Set the actual number.

Definition at line 75 of file [ProgressStatus.hpp](#).

### 32.128.3.9 void stdair::ProgressStatus::reset ()

Reset the current number (to 0).

Definition at line 50 of file [ProgressStatus.cpp](#).

References [stdair::DEFAULT\\_PROGRESS\\_STATUS](#).

### 32.128.3.10 Count\_T stdair::ProgressStatus::operator+= (Count\_T iIncrement) [inline]

Increment the current number.

Definition at line 83 of file [ProgressStatus.hpp](#).

### 32.128.3.11 Count\_T stdair::ProgressStatus::operator++ () [inline]

Increment the current number.

Definition at line 89 of file [ProgressStatus.hpp](#).

**32.128.3.12** `const std::string stdair::ProgressStatus::describe () const` **[virtual]**

Give a description of the structure (e.g., "1 {99, 100}").

Implements [stdair::StructAbstract](#).

Definition at line 56 of file [ProgressStatus.cpp](#).

**32.128.3.13** `const std::string stdair::ProgressStatus::toString () const`

Give a description of the structure (e.g., "1% (1/ 100)").

Definition at line 63 of file [ProgressStatus.cpp](#).

References [progress\(\)](#).

**32.128.3.14** `void stdair::StructAbstract::toStream (std::ostream & ioOut) const` **[inline, inherited]**

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 29 of file [StructAbstract.hpp](#).

References [stdair::StructAbstract::describe\(\)](#).

**32.128.3.15** `virtual void stdair::StructAbstract::fromStream (std::istream & ioIn)` **[inline, virtual, inherited]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented in [stdair::ProgressStatusSet](#), [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::EventStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 38 of file [StructAbstract.hpp](#).

Referenced by [operator>>\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/basic/ProgressStatus.hpp](#)
- [stdair/basic/ProgressStatus.cpp](#)

## 32.129 stdair::ProgressStatusSet Struct Reference

### 32.129.1 Detailed Description

Structrure holding a set of progress status.

Definition at line 22 of file [ProgressStatusSet.hpp](#).

### 32.129.2 Constructor & Destructor Documentation

#### 32.129.2.1 stdair::ProgressStatusSet::ProgressStatusSet (const EventType::EN\_EventType &iType)

Constructor .

Definition at line 20 of file [ProgressStatusSet.cpp](#).

#### 32.129.2.2 stdair::ProgressStatusSet::ProgressStatusSet (const ProgressStatusSet &iProgressStatusSet)

Copy constructor.

Definition at line 27 of file [ProgressStatusSet.cpp](#).

### 32.129.2.3 stdair::ProgressStatusSet::~~ProgressStatusSet ()

Destructor.

Definition at line 36 of file [ProgressStatusSet.cpp](#).

## 32.129.3 Member Function Documentation

### 32.129.3.1 const ProgressStatus& stdair::ProgressStatusSet::getTypeSpecificStatus () const [inline]

Get the progress status specific to that event type.

Note that that progress status may not be up-to-date. That attribute is up-to-date only after a call to the popEvent() method of SEvMgr.

Definition at line 31 of file [ProgressStatusSet.hpp](#).

### 32.129.3.2 const ProgressStatus& stdair::ProgressStatusSet::getSpecificGeneratorStatus () const [inline]

Get the progress status specific to the content key for that event.

Note that that progress status may not be up-to-date. That attribute is up-to-date only after a call to the popEvent() method of SEvMgr.

Definition at line 43 of file [ProgressStatusSet.hpp](#).

### 32.129.3.3 const ProgressStatus& stdair::ProgressStatusSet::getOverallStatus () const [inline]

Get the overall progress status (absolute, for all the events).

Note that that progress status may not be up-to-date. That attribute is up-to-date only after a call to the popEvent() method of SEvMgr.

Definition at line 54 of file [ProgressStatusSet.hpp](#).

### 32.129.3.4 void stdair::ProgressStatusSet::setTypeSpecificStatus (const ProgressStatus & iProgressStatus) [inline]

Set/update the progress status specific to that event type.

Definition at line 62 of file [ProgressStatusSet.hpp](#).

### 32.129.3.5 void stdair::ProgressStatusSet::setSpecificGeneratorStatus (const ProgressStatus & iProgressStatus, const EventGeneratorKey\_T & iKey) [inline]

Set/update the progress status specific to the content key for that event.

Definition at line 68 of file [ProgressStatusSet.hpp](#).

### 32.129.3.6 void stdair::ProgressStatusSet::setOverallStatus (const ProgressStatus & iProgressStatus) [inline]

Set/update the overall progress status (absolute, for all the events).

Definition at line 76 of file [ProgressStatusSet.hpp](#).

### 32.129.3.7 void stdair::ProgressStatusSet::fromStream (std::istream & ioIn) [virtual]

Read a Business Object from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 40 of file [ProgressStatusSet.cpp](#).

### 32.129.3.8 const std::string stdair::ProgressStatusSet::describe () const [virtual]

Display of the structure.

Implements [stdair::StructAbstract](#).

Definition at line 44 of file [ProgressStatusSet.cpp](#).

References [stdair::ProgressStatus::getActualNb\(\)](#), [stdair::ProgressStatus::getCurrentNb\(\)](#), and [stdair::ProgressStatus::getExpectedNb\(\)](#).

### 32.129.3.9 void stdair::StructAbstract::toStream (std::ostream & ioOut) const [inline, inherited]

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 29 of file [StructAbstract.hpp](#).

References [stdair::StructAbstract::describe\(\)](#).

The documentation for this struct was generated from the following files:

#### 32.130.1 Detailed Description

Class holding a random generator.

Definition at line 17 of file [RandomGeneration.hpp](#).

#### 32.130.2 Constructor & Destructor Documentation

##### 32.130.2.1 stdair::RandomGeneration::RandomGeneration (const RandomSeed\_T & iSeed)

Main constructor.

Definition at line 27 of file [RandomGeneration.cpp](#).

### 32.130.2.2 stdair::RandomGeneration::RandomGeneration ()

Default constructor.

#### Note:

As per Boost bug #3516 (<https://svn.boost.org/trac/boost/ticket/3516>) the seed should not be set to 0 (at least on versions of Boost lower than 1.44).

Definition at line 23 of file [RandomGeneration.cpp](#).

### 32.130.2.3 stdair::RandomGeneration::~~RandomGeneration ()

Destructor.

Definition at line 37 of file [RandomGeneration.cpp](#).

## 32.130.3 Member Function Documentation

### 32.130.3.1 RealNumber\_T stdair::RandomGeneration::generateUniform01 ()

Generate a randomised number following a uniform distribution between 0 (included) and 1 (excluded).

Definition at line 53 of file [RandomGeneration.cpp](#).

References [\\_generator](#).

Referenced by [generateNormal\(\)](#), [generateUniform\(\)](#), and [operator\(\)\(\)](#).

### 32.130.3.2 RealNumber\_T stdair::RandomGeneration::operator() () [inline]

Same as [generateUniform01\(\)](#). That operator is provided for convenient reasons.

Definition at line 30 of file [RandomGeneration.hpp](#).

References [generateUniform01\(\)](#).

### 32.130.3.3 RealNumber\_T stdair::RandomGeneration::generateUniform (const RealNumber\_T & iMinValue, const RealNumber\_T & iMaxValue)

Generate a randomized number following a uniform distribution between a minimum (included) and a maximum (excluded) value.

Definition at line 59 of file [RandomGeneration.cpp](#).

References [generateUniform01\(\)](#).

### 32.130.3.4 RealNumber\_T stdair::RandomGeneration::generateNormal (const RealNumber\_T & mu, const RealNumber\_T & sigma)

Generate a randomized number following a normal distribution specified by a mean and a standard deviation.

Definition at line 68 of file [RandomGeneration.cpp](#).

References [generateUniform01\(\)](#).

Referenced by [stdair::BookingClass::generateDemandSamples\(\)](#).

### 32.130.3.5 RealNumber\_T stdair::RandomGeneration::generateExponential (const RealNumber\_T & *lambda*)

Generate a randomized number following an exponential distribution specified by a mean and a lambda parameter.

Definition at line 86 of file [RandomGeneration.cpp](#).

References [\\_generator](#).

### 32.130.3.6 BaseGenerator\_T& stdair::RandomGeneration::getBaseGenerator () [inline]

Retrieve the base generator for initialising other random generators.

Definition at line 56 of file [RandomGeneration.hpp](#).

References [\\_generator](#).

### 32.130.3.7 const std::string stdair::RandomGeneration::describe () const [virtual]

Give a description of the structure (for display purposes).

Implements [stdair::StructAbstract](#).

Definition at line 46 of file [RandomGeneration.cpp](#).

References [\\_generator](#).

### 32.130.3.8 void stdair::RandomGeneration::init (const RandomSeed\_T & *iSeed*)

Initialise the random generator.

A uniform random number distribution is defined, which produces "real" values between 0 and 1 (0 inclusive, 1 exclusive).

Definition at line 41 of file [RandomGeneration.cpp](#).

References [\\_generator](#).

### 32.130.3.9 void stdair::StructAbstract::toStream (std::ostream & *ioOut*) const [inline, inherited]

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 29 of file [StructAbstract.hpp](#).

References [stdair::StructAbstract::describe\(\)](#).

### 32.130.3.10 virtual void stdair::StructAbstract::fromStream (std::istream & *ioIn*) [[inline](#), [virtual](#), [inherited](#)]

Read a Business Object from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented in [stdair::ProgressStatusSet](#), [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::EventStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 38 of file [StructAbstract.hpp](#).

Referenced by [operator>>\(\)](#).

## 32.130.4 Member Data Documentation

### 32.130.4.1 BaseGenerator\_T stdair::RandomGeneration::\_generator

Random number generator engine.

The random number generator is currently based on `boost::minstd_rand`. Alternates are `boost::mt19937`, `boost::ecuyer1988`.

Definition at line 112 of file [RandomGeneration.hpp](#).

Referenced by [describe\(\)](#), [generateExponential\(\)](#), [generateUniform01\(\)](#), [getBaseGenerator\(\)](#), and [init\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/basic/RandomGeneration.hpp](#)
- [stdair/basic/RandomGeneration.cpp](#)

## 32.131 stdair::RMEventStruct Struct Reference

`#include <stdair/bom/RMEventStruct.hpp>`  
 Inheritance diagram for `stdair::RMEventStruct`:

## Public Member Functions

- const [AirlineCode\\_T](#) & [getAirlineCode](#) () const
- const [KeyDescription\\_T](#) & [getFlightDateDescription](#) () const
- const [DateTime\\_T](#) & [getRMEventTime](#) () const
- void [toStream](#) (std::ostream &ioOut) const
- void [fromStream](#) (std::istream &ioIn)
- const std::string [describe](#) () const
- [RMEventStruct](#) (const [AirlineCode\\_T](#) &, const [KeyDescription\\_T](#) &, const [DateTime\\_T](#) &)
- [RMEventStruct](#) (const [RMEventStruct](#) &)
- [RMEventStruct](#) ()
- [~RMEventStruct](#) ()

### 32.131.1 Detailed Description

Structure holding the elements of a snapshot .

Definition at line 19 of file [RMEventStruct.hpp](#).

### 32.131.2 Constructor & Destructor Documentation

#### 32.131.2.1 stdair::RMEventStruct::RMEventStruct (const AirlineCode\_T & iAirlineCode, const KeyDescription\_T & iFlightDateDescription, const DateTime\_T & iRMEventTime)

Constructor.

Definition at line 27 of file [RMEventStruct.cpp](#).

#### 32.131.2.2 stdair::RMEventStruct::RMEventStruct (const RMEventStruct & iRMEvent)

Copy constructor.

Definition at line 19 of file [RMEventStruct.cpp](#).

#### 32.131.2.3 stdair::RMEventStruct::RMEventStruct ()

Default constructor.

It is private so that it can not be used.

Definition at line 13 of file [RMEventStruct.cpp](#).

#### 32.131.2.4 stdair::RMEventStruct::~~RMEventStruct ()

Destructor.

Definition at line 36 of file [RMEventStruct.cpp](#).

### 32.131.3 Member Function Documentation

#### 32.131.3.1 const AirlineCode\_T& stdair::RMEventStruct::getAirlineCode () const [inline]

Get the airline code.

Definition at line 23 of file [RMEventStruct.hpp](#).

#### 32.131.3.2 const KeyDescription\_T& stdair::RMEventStruct::getFlightDateDescription () const [inline]

Get the string describing the flight-date key.

Definition at line 28 of file [RMEventStruct.hpp](#).

#### 32.131.3.3 const DateTime\_T& stdair::RMEventStruct::getRMEventTime () const [inline]

Get the snapshot action time.

Definition at line 33 of file [RMEventStruct.hpp](#).

#### 32.131.3.4 void stdair::RMEventStruct::toStream (std::ostream & ioOut) const

Dump a Business Object into an output stream.

##### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 40 of file [RMEventStruct.cpp](#).

References [describe\(\)](#).

#### 32.131.3.5 void stdair::RMEventStruct::fromStream (std::istream & ioIn) [virtual]

Read a Business Object from an input stream.

##### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 45 of file [RMEventStruct.cpp](#).

#### 32.131.3.6 const std::string stdair::RMEventStruct::describe () const [virtual]

Display of the structure.

Implements [stdair::StructAbstract](#).

Definition at line 49 of file [RMEventStruct.cpp](#).

Referenced by [toStream\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/RMEventStruct.hpp](#)
- [stdair/bom/RMEventStruct.cpp](#)

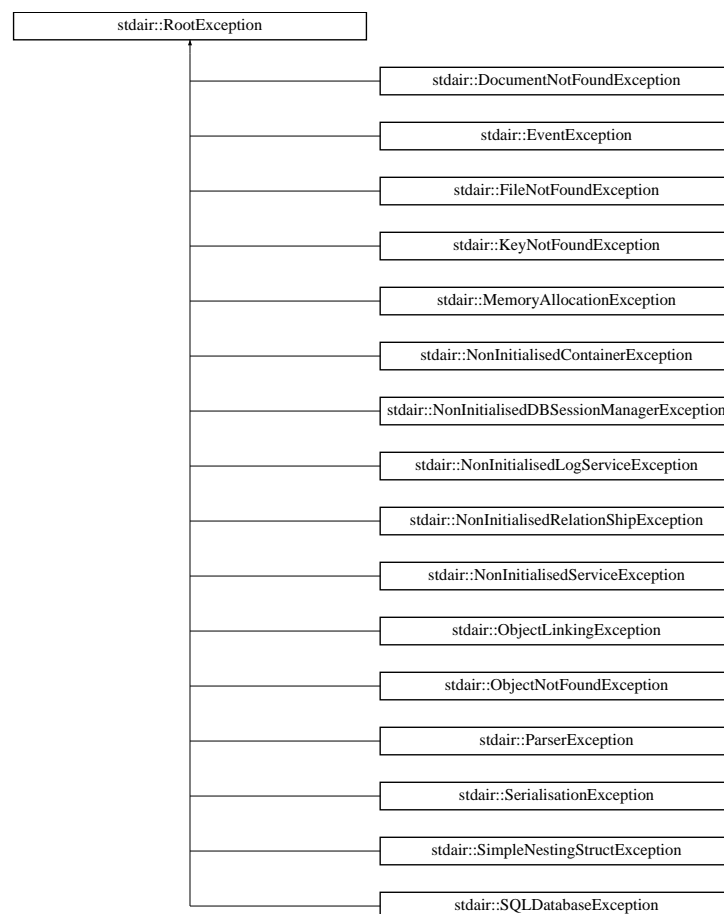

## 32.132 stdair::RootException Class Reference

Root of the [stdair](#) exceptions.

```
#include <stdair/stdair_exceptions.hpp>
stdair::RootException::
```

diagram

for

### Public Member Functions

- [RootException](#) (const std::string &iWhat)
- [RootException](#) ()
- virtual [~RootException](#) () throw ()
- const char \* [what](#) () const throw ()

### Protected Attributes

- std::string [\\_what](#)

### 32.132.1 Detailed Description

Root of the `stdair` exceptions. All the `stdair` exceptions inherit from that root, allowing to catch them and to spot them easily when arising in code wrapping the `stdair` library.

Definition at line 19 of file [stdair\\_exceptions.hpp](#).

### 32.132.2 Constructor & Destructor Documentation

#### 32.132.2.1 `stdair::RootException::RootException (const std::string & iWhat) [inline]`

Main Constructor.

Definition at line 24 of file [stdair\\_exceptions.hpp](#).

#### 32.132.2.2 `stdair::RootException::RootException () [inline]`

Default constructor.

Definition at line 28 of file [stdair\\_exceptions.hpp](#).

#### 32.132.2.3 `virtual stdair::RootException::~~RootException () throw () [inline, virtual]`

Destructor.

Definition at line 33 of file [stdair\\_exceptions.hpp](#).

### 32.132.3 Member Function Documentation

#### 32.132.3.1 `const char* stdair::RootException::what () const throw () [inline]`

Give the details of the exception.

Definition at line 38 of file [stdair\\_exceptions.hpp](#).

References [\\_what](#).

Referenced by [stdair::ConfigHolderStruct::updateAirlineFeatures\(\)](#).

### 32.132.4 Member Data Documentation

#### 32.132.4.1 `std::string stdair::RootException::_what [protected]`

Details for the exception.

Definition at line 46 of file [stdair\\_exceptions.hpp](#).

Referenced by [what\(\)](#).

The documentation for this class was generated from the following file:

- [stdair/stdair\\_exceptions.hpp](#)

## 32.133 stdair::RootFilePath Class Reference

Root of the input and output files.

#include <stdair/stdair\_file.hpp> Inheritance diagram for stdair::RootFilePath:

### Public Member Functions

- [RootFilePath](#) (const [Filename\\_T](#) &iFilename)
- [RootFilePath](#) ()
- virtual [~RootFilePath](#) ()
- const char \* [name](#) () const

### Protected Attributes

- const [Filename\\_T](#) \_filename

#### 32.133.1 Detailed Description

Root of the input and output files. All the files inherit from that root.

Definition at line 22 of file [stdair\\_file.hpp](#).

#### 32.133.2 Constructor & Destructor Documentation

##### 32.133.2.1 stdair::RootFilePath::RootFilePath (const [Filename\\_T](#) &iFilename) [inline]

Main Constructor.

Definition at line 27 of file [stdair\\_file.hpp](#).

##### 32.133.2.2 stdair::RootFilePath::RootFilePath () [inline]

Default constructor.

Definition at line 32 of file [stdair\\_file.hpp](#).

##### 32.133.2.3 virtual stdair::RootFilePath::~~RootFilePath () [inline, virtual]

Destructor.

Definition at line 37 of file [stdair\\_file.hpp](#).

### 32.133.3 Member Function Documentation

#### 32.133.3.1 const char\* stdair::RootFilePath::name() const [inline]

Give the details of the exception.

Definition at line 42 of file [stdair\\_file.hpp](#).

References [\\_filename](#).

Referenced by [stdair::BomINIImport::importINIConfig\(\)](#).

### 32.133.4 Member Data Documentation

#### 32.133.4.1 const Filename\_T stdair::RootFilePath::\_filename [protected]

Name of the file.

Definition at line 50 of file [stdair\\_file.hpp](#).

Referenced by [name\(\)](#).

The documentation for this class was generated from the following file:

- [stdair/stdair\\_file.hpp](#)

## 32.134 stdair::SampleType Struct Reference

Enumeration of BOM sample types.

`#include <stdair/basic/SampleType.hpp>`Inheritance diagram for stdair::SampleType::

### Public Types

- enum [EN\\_SampleType](#) {  
[ALL](#) = 0, [A4P](#), [RMS](#), [INV](#),  
[SCH](#), [RAC](#), [FQT](#), [CRS](#),  
[DEM](#), [EVT](#), [CCM](#), [LAST\\_VALUE](#) }

### Public Member Functions

- [EN\\_SampleType](#) [getType](#)() const
- std::string [getTypeAsString](#)() const
- const std::string [describe](#)() const
- bool [operator==](#)(const [EN\\_SampleType](#) &) const
- [SampleType](#)(const [EN\\_SampleType](#) &)

- [SampleType](#) (const char iType)
- [SampleType](#) (const [SampleType](#) &)
- void [toStream](#) (std::ostream &ioOut) const
- virtual void [fromStream](#) (std::istream &ioIn)

### Static Public Member Functions

- static const std::string & [getLabel](#) (const [EN\\_SampleType](#) &)
- static char [getTypeLabel](#) (const [EN\\_SampleType](#) &)
- static std::string [getTypeLabelAsString](#) (const [EN\\_SampleType](#) &)
- static std::string [describeLabels](#) ()

#### 32.134.1 Detailed Description

Enumeration of BOM sample types. In order to test some components, it is often easier to fill the BOM tree with hard-coded structures than set up CSV input files and parsing them. That enumeration structure tells for which component(s) the sample BOM tree should be built. By default, a BOM sample tree is built for all the components, i.e., it contains StdAir objects for all the other components (AirInv, AirSched, etc).

Definition at line 25 of file [SampleType.hpp](#).

#### 32.134.2 Member Enumeration Documentation

##### 32.134.2.1 enum stdair::SampleType::EN\_SampleType

### Enumerator:

*ALL*  
*A4P*  
*RMS*  
*INV*  
*SCH*  
*RAC*  
*FQT*  
*CRS*  
*DEM*  
*EVT*  
*CCM*  
*LAST\_VALUE*

Definition at line 27 of file [SampleType.hpp](#).

#### 32.134.3 Constructor & Destructor Documentation

##### 32.134.3.1 stdair::SampleType::SampleType (const [EN\\_SampleType](#) & *iSampleType*)

Constructor.

Definition at line 36 of file [SampleType.cpp](#).

### 32.134.3.2 stdair::SampleType::SampleType (const char *iType*)

Constructor.

Definition at line 41 of file [SampleType.cpp](#).

References [A4P](#), [ALL](#), [CCM](#), [CRS](#), [DEM](#), [describeLabels\(\)](#), [EVT](#), [FQT](#), [INV](#), [LAST\\_VALUE](#), [RAC](#), [RMS](#), and [SCH](#).

### 32.134.3.3 stdair::SampleType::SampleType (const SampleType & *iSampleType*)

Default copy constructor.

Definition at line 31 of file [SampleType.cpp](#).

## 32.134.4 Member Function Documentation

### 32.134.4.1 const std::string & stdair::SampleType::getLabel (const EN\_SampleType & *iType*) [static]

Get the label as a string (e.g., "Inventory" or "Schedule").

Definition at line 67 of file [SampleType.cpp](#).

### 32.134.4.2 char stdair::SampleType::getTypeLabel (const EN\_SampleType & *iType*) [static]

Get the label as a single char (e.g., 'I' or 'S').

Definition at line 72 of file [SampleType.cpp](#).

### 32.134.4.3 std::string stdair::SampleType::getTypeLabelAsString (const EN\_SampleType & *iType*) [static]

Get the label as a string of a single char (e.g., "I" or "S").

Definition at line 77 of file [SampleType.cpp](#).

### 32.134.4.4 std::string stdair::SampleType::describeLabels () [static]

List the labels.

Definition at line 84 of file [SampleType.cpp](#).

References [LAST\\_VALUE](#).

Referenced by [SampleType\(\)](#).

### 32.134.4.5 SampleType::EN\_SampleType stdair::SampleType::getType () const

Get the enumerated value.

Definition at line 96 of file [SampleType.cpp](#).

**32.134.4.6 std::string stdair::SampleType::getTypeAsString () const**

Get the enumerated value as a short string (e.g., "I" or "S").

Definition at line 101 of file [SampleType.cpp](#).

**32.134.4.7 const std::string stdair::SampleType::describe () const [virtual]**

Give a description of the structure (e.g., "Inventory" or "Schedule").

Implements [stdair::StructAbstract](#).

Definition at line 108 of file [SampleType.cpp](#).

**32.134.4.8 bool stdair::SampleType::operator== (const EN\_SampleType & iType) const**

Comparison operator.

Definition at line 115 of file [SampleType.cpp](#).

**32.134.4.9 void stdair::StructAbstract::toStream (std::ostream & ioOut) const [inline, inherited]**

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 29 of file [StructAbstract.hpp](#).

References [stdair::StructAbstract::describe\(\)](#).

**32.134.4.10 virtual void stdair::StructAbstract::fromStream (std::istream & ioIn) [inline, virtual, inherited]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented in [stdair::ProgressStatusSet](#), [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::EventStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 38 of file [StructAbstract.hpp](#).

Referenced by [operator>>\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/basic/SampleType.hpp](#)

### 32.136.1 Detailed Description

Class representing the actual attributes for an airline segment-cabin.

Definition at line 33 of file [SegmentCabin.hpp](#).

### 32.136.2 Member Typedef Documentation

#### 32.136.2.1 typedef SegmentCabinKey stdair::SegmentCabin::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 44 of file [SegmentCabin.hpp](#).

### 32.136.3 Constructor & Destructor Documentation

#### 32.136.3.1 stdair::SegmentCabin::SegmentCabin (const Key\_T & iKey) [protected]

Constructor.

Definition at line 39 of file [SegmentCabin.cpp](#).

#### 32.136.3.2 stdair::SegmentCabin::~~SegmentCabin () [protected, virtual]

Destructor.

Definition at line 52 of file [SegmentCabin.cpp](#).

### 32.136.4 Member Function Documentation

#### 32.136.4.1 const Key\_T& stdair::SegmentCabin::getKey () const [inline]

Get the segment-cabin key (cabin code).

Definition at line 52 of file [SegmentCabin.hpp](#).

References [\\_key](#).

#### 32.136.4.2 BomAbstract\* const stdair::SegmentCabin::getParent () const [inline]

Get the parent object.

Definition at line 59 of file [SegmentCabin.hpp](#).

References [\\_parent](#).

**32.136.4.3 const HolderMap\_T& stdair::SegmentCabin::getHolderMap () const [inline]**

Get the map of children holders.

Definition at line 66 of file [SegmentCabin.hpp](#).

References [\\_holderMap](#).

**32.136.4.4 const CabinCode\_T& stdair::SegmentCabin::getCabinCode () const [inline]**

Get the cabin code (primary key).

Definition at line 73 of file [SegmentCabin.hpp](#).

References [\\_key](#), and [stdair::SegmentCabinKey::getCabinCode\(\)](#).

Referenced by [getFullerKey\(\)](#).

**32.136.4.5 const MapKey\_T stdair::SegmentCabin::getFullerKey () const**

Get the (segment-date, segment-cabin) key (board point, off point and cabin code).

**Note:**

That method assumes that the parent object derives from the [SegmentDate](#) class, as it needs to have access to the [describeKey\(\)](#) method.

Definition at line 56 of file [SegmentCabin.cpp](#).

References [stdair::DEFAULT\\_KEY\\_FLD\\_DELIMITER](#), [stdair::SegmentDate::describeKey\(\)](#), and [getCabinCode\(\)](#).

**32.136.4.6 const SegmentSnapshotTable& stdair::SegmentCabin::getSegmentSnapshotTable () const [inline]**

Get the guilltine block.

Definition at line 88 of file [SegmentCabin.hpp](#).

References [\\_segmentSnapshotTable](#).

**32.136.4.7 const CabinCapacity\_T& stdair::SegmentCabin::getCapacity () const [inline]**

Get the cabin capacity.

Definition at line 94 of file [SegmentCabin.hpp](#).

References [\\_capacity](#).

**32.136.4.8 const BlockSpace\_T& stdair::SegmentCabin::getBlockSpace () const [inline]**

Get the blocked number of bookings.

Definition at line 99 of file [SegmentCabin.hpp](#).

References [\\_blockSpace](#).

**32.136.4.9 const BlockSpace\_T& stdair::SegmentCabin::getMIN () const [inline]**

Get the blocked number of bookings.

Definition at line 104 of file [SegmentCabin.hpp](#).

References [\\_min](#).

**32.136.4.10 const UPR\_T& stdair::SegmentCabin::getUPR () const [inline]**

Unsold Protection (UPR).

Definition at line 109 of file [SegmentCabin.hpp](#).

References [\\_upr](#).

**32.136.4.11 const NbOfBookings\_T& stdair::SegmentCabin::getBookingCounter () const [inline]**

Get the booking counter.

Definition at line 114 of file [SegmentCabin.hpp](#).

References [\\_bookingCounter](#).

**32.136.4.12 const CommittedSpace\_T& stdair::SegmentCabin::getCommittedSpace () const [inline]**

Get the committed Space value.

Definition at line 119 of file [SegmentCabin.hpp](#).

References [\\_committedSpace](#).

**32.136.4.13 const Availability\_T& stdair::SegmentCabin::getAvailabilityPool () const [inline]**

Get the availability pool value.

Definition at line 124 of file [SegmentCabin.hpp](#).

References [\\_availabilityPool](#).

**32.136.4.14 const BidPrice\_T& stdair::SegmentCabin::getCurrentBidPrice () const [inline]**

Retrieve the current Bid-Price.

Definition at line 129 of file [SegmentCabin.hpp](#).

References [\\_currentBidPrice](#).

**32.136.4.15 const BidPriceVector\_T& stdair::SegmentCabin::getBidPriceVector () const [inline]**

Retrieve the Bid-Price Vector.

Definition at line 134 of file [SegmentCabin.hpp](#).

References [\\_bidPriceVector](#).

#### 32.136.4.16 const bool stdair::SegmentCabin::getFareFamilyStatus () const [inline]

Retrieve the status of fare family.

Definition at line 139 of file [SegmentCabin.hpp](#).

References [\\_fareFamilyActivation](#).

#### 32.136.4.17 const PolicyList\_T& stdair::SegmentCabin::getConvexHull () const [inline]

Retrieve the convex hull.

### 32.137.1 Detailed Description

Key of a given segment-cabin, made of a cabin code (only).

Definition at line 26 of file [SegmentCabinKey.hpp](#).

### 32.137.2 Constructor & Destructor Documentation

#### 32.137.2.1 stdair::SegmentCabinKey::SegmentCabinKey (const CabinCode\_T & iCabinCode)

Constructor.

Definition at line 23 of file [SegmentCabinKey.cpp](#).

#### 32.137.2.2 stdair::SegmentCabinKey::SegmentCabinKey (const SegmentCabinKey & iKey)

Copy constructor.

Definition at line 28 of file [SegmentCabinKey.cpp](#).

#### 32.137.2.3 stdair::SegmentCabinKey::~~SegmentCabinKey ()

Destructor.

Definition at line 33 of file [SegmentCabinKey.cpp](#).

### 32.137.3 Member Function Documentation

#### 32.137.3.1 const CabinCode\_T& stdair::SegmentCabinKey::getCabinCode () const [inline]

Get the cabin code.

Definition at line 56 of file [SegmentCabinKey.hpp](#).

Referenced by [stdair::SegmentCabin::getCabinCode\(\)](#).

#### 32.137.3.2 void stdair::SegmentCabinKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 37 of file [SegmentCabinKey.cpp](#).

References [toString\(\)](#).

#### 32.137.3.3 void stdair::SegmentCabinKey::fromStream (std::istream & ioIn) [virtual]

Read a Business Object Key from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 42 of file [SegmentCabinKey.cpp](#).

**32.137.3.4 const std::string stdair::SegmentCabinKey::toString () const [virtual]**

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-date.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 46 of file [SegmentCabinKey.cpp](#).

Referenced by [stdair::SegmentCabin::describeKey\(\)](#), [stdair::BomRetriever::retrieveDummySegmentCabin\(\)](#), and [toStream\(\)](#).

**32.137.3.5 template<class Archive > void stdair::SegmentCabinKey::serialize (Archive & ar, const unsigned int iFileVersion) [inline]**

Serialisation.

Get the off point (part of the primary key).

Definition at line 76 of file [SegmentDate.hpp](#).

References [\\_key](#), and [stdair::SegmentDateKey::getOffPoint\(\)](#).

**32.138.4.5 const HolderMap\_T& stdair::SegmentDate::getHolderMap () const [inline]**

Get the map of children holders.

Definition at line 83 of file [SegmentDate.hpp](#).

References [\\_holderMap](#).

**32.138.4.6 const Date\_T& stdair::SegmentDate::getBoardingDate () const [inline]**

Get the boarding date.

Definition at line 90 of file [SegmentDate.hpp](#).

References [\\_boardingDate](#).

**32.138.4.7 const Duration\_T& stdair::SegmentDate::getBoardingTime () const [inline]**

Get the boarding time.

Definition at line 97 of file [SegmentDate.hpp](#).

References [\\_boardingTime](#).

**32.138.4.8 const Date\_T& stdair::SegmentDate::getOffDate () const [inline]**

Get the off date.

Definition at line 104 of file [SegmentDate.hpp](#).

References [\\_offDate](#).

**32.138.4.9 const Duration\_T& stdair::SegmentDate::getOffTime () const [inline]**

Get the off time.

Definition at line 111 of file [SegmentDate.hpp](#).

References [\\_offTime](#).

**32.138.4.10 const Duration\_T& stdair::SegmentDate::getElapsedTime () const [inline]**

Get the elapsed time.

Definition at line 118 of file [SegmentDate.hpp](#).

References [\\_elapsedTime](#).

**32.138.4.11 const Distance\_T& stdair::SegmentDate::getDistance () const [inline]**

Get the distance.

Definition at line 125 of file [SegmentDate.hpp](#).

References [\\_distance](#).

**32.138.4.12 const DateOffset\_T stdair::SegmentDate::getDateOffset () const [inline]**

Get the date offset (off date - boarding date).

Definition at line 132 of file [SegmentDate.hpp](#).

References [\\_boardingDate](#), and [\\_offDate](#).

Referenced by [getTimeOffset\(\)](#).

**32.138.4.13 const Duration\_T stdair::SegmentDate::getTimeOffset () const**

Get the time offset between boarding and off points.

It is defined as being:

$\text{TimeOffset} = (\text{OffTime} - \text{BoardingTime}) + (\text{OffDate} - \text{BoardingDate}) * 24$

- [ElapsedTime](#).

Definition at line 55 of file [SegmentDate.cpp](#).

References [\\_boardingTime](#), [\\_elapsedTime](#), [\\_offTime](#), and [getDateOffset\(\)](#).

**32.138.4.14 SegmentDate\* stdair::SegmentDate::getOperatingSegmentDate () const [inline]**

Get the "operating" segment date.

Definition at line 149 of file [SegmentDate.hpp](#).

References [\\_operatingSegmentDate](#).

**32.138.4.15** `const SegmentDateList_T& stdair::SegmentDate::getMarketingSegmentDateList () const [inline]`

Get the list of marketing segment dates.

Definition at line 156 of file [SegmentDate.hpp](#).

References [\\_marketingSegmentDateList](#).

**32.138.4.16** `const RoutingLegKeyList_T& stdair::SegmentDate::getLegKeyList () const [inline]`

Get the list of routing leg keys.

Definition at line 163 of file [SegmentDate.hpp](#).

References [\\_routingLegKeyList](#).

**32.138.4.17** `void stdair::SegmentDate::setBoardingDate (const Date_T & iBoardingDate) [inline]`

Set the boarding date.

Definition at line 172 of file [SegmentDate.hpp](#).

References [\\_boardingDate](#).

**32.138.4.18** `void stdair::SegmentDate::setBoardingTime (const Duration_T & iBoardingTime) [inline]`

Set the boarding time.

Definition at line 179 of file [SegmentDate.hpp](#).

References [\\_boardingTime](#).

**32.138.4.19** `void stdair::SegmentDate::setOffDate (const Date_T & iOffDate) [inline]`

Set the off date.

Definition at line 186 of file [SegmentDate.hpp](#).

References [\\_offDate](#).

**32.138.4.20** `void stdair::SegmentDate::setOffTime (const Duration_T & iOffTime) [inline]`

Set the off time.

Definition at line 193 of file [SegmentDate.hpp](#).

References [\\_offTime](#).

**32.138.4.21** `void stdair::SegmentDate::setElapsedTime (const Duration_T & iElapsedTime) [inline]`

Set the elapsed time.

Definition at line 200 of file [SegmentDate.hpp](#).

References [\\_elapsedTime](#).

**32.138.4.22** void stdair::SegmentDate::setDistance (const Distance\_T & iDistance) [inline]

Set the distance.

Definition at line 207 of file [SegmentDate.hpp](#).

References [\\_distance](#).

**32.138.4.23** void stdair::SegmentDate::addLegKey (const std::string & iLegKey) [inline]

Add a routing leg key to the list.

Definition at line 214 of file [SegmentDate.hpp](#).

References [\\_routingLegKeyList](#).

**32.138.4.24** void stdair::SegmentDate::toStream (std::ostream & ioOut) const [inline, virtual]

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 233 of file [SegmentDate.hpp](#).

References [toString\(\)](#).

**32.138.4.25** void stdair::SegmentDate::fromStream (std::istream & ioIn) [inline, virtual]

Read a Business Object from an input stream.

#### Parameters:

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 242 of file [SegmentDate.hpp](#).

**32.138.4.26** std::string stdair::SegmentDate::toString () const [virtual]

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 48 of file [SegmentDate.cpp](#).

References [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

#### 32.138.4.27 `const std::string stdair::SegmentDate::describeKey () const` `[inline]`

Get a string describing the key.

Definition at line 253 of file [SegmentDate.hpp](#).

References [\\_key](#), and [stdair::SegmentDateKey::toString\(\)](#).

Referenced by [stdair::SegmentCabin::getFullerKey\(\)](#), [stdair::BomRetriever::retrieveFullKeyFromSegmentDate\(\)](#), and [toString\(\)](#).

#### 32.138.4.28 `template<class Archive > void stdair::SegmentDate::serialize (Archive & ar, const unsigned int iFileVersion) [inline]`

Serialisation.

Definition at line 208 of file [CmdBomSerialiser.cpp](#).

References [\\_key](#).

#### 32.138.6.2 BomAbstract\* stdair::SegmentDate::\_parent [protected]

Pointer on the parent class ([FlightDate](#)).

Definition at line 312 of file [SegmentDate.hpp](#).

Referenced by [getParent\(\)](#).

#### 32.138.6.3 HolderMap\_T stdair::SegmentDate::\_holderMap [protected]

Map holding the children ([SegmentCabin](#) objects).

Definition at line 317 of file [SegmentDate.hpp](#).

Referenced by [getHolderMap\(\)](#).

#### 32.138.6.4 SegmentDate\* stdair::SegmentDate::\_operatingSegmentDate [protected]

Pointer on the operating [SegmentDate](#). Nota: 1. "operating" refers to the codeshare contract seller. 2. the pointer will be NULL if the segment date is itself the "operating" one.

Definition at line 325 of file [SegmentDate.hpp](#).

Referenced by [getOperatingSegmentDate\(\)](#).

#### 32.138.6.5 SegmentDateList\_T stdair::SegmentDate::\_marketingSegmentDateList [protected]

List holding the marketing segment dates. Nota: 1. "marketing" refers to the codeshare contract seller. 2. the list will be empty if the segment date is itself the "marketing" one.

Definition at line 333 of file [SegmentDate.hpp](#).

Referenced by [getMarketingSegmentDateList\(\)](#).

#### 32.138.6.6 Date\_T stdair::SegmentDate::\_boardingDate [protected]

Boarding date.

Definition at line 338 of file [SegmentDate.hpp](#).

Referenced by [getBoardingDate\(\)](#), [getDateOffset\(\)](#), and [setBoardingDate\(\)](#).

#### 32.138.6.7 Duration\_T stdair::SegmentDate::\_boardingTime [protected]

Boarding time.

Definition at line 343 of file [SegmentDate.hpp](#).

Referenced by [getBoardingTime\(\)](#), [getTimeOffset\(\)](#), and [setBoardingTime\(\)](#).

#### 32.138.6.8 Date\_T stdair::SegmentDate::\_offDate [protected]

Landing date.

Definition at line 348 of file [SegmentDate.hpp](#).

Referenced by [getDateOffset\(\)](#), [getOffDate\(\)](#), and [setOffDate\(\)](#).

#### 32.138.6.9 Duration\_T stdair::SegmentDate::\_offTime [protected]

Landing time.

Definition at line 353 of file [SegmentDate.hpp](#).

Referenced by [getOffTime\(\)](#), [getTimeOffset\(\)](#), and [setOffTime\(\)](#).

#### 32.138.6.10 Duration\_T stdair::SegmentDate::\_elapsedTime [protected]

Trip elapsed time.

Definition at line 358 of file [SegmentDate.hpp](#).

Referenced by [getElapsedTime\(\)](#), [getTimeOffset\(\)](#), and [setElapsedTime\(\)](#).

#### 32.138.6.11 Distance\_T stdair::SegmentDate::\_distance [protected]

Trip distance.

Definition at line 363 of file [SegmentDate.hpp](#).

Referenced by [getDistance\(\)](#), and [setDistance\(\)](#).

#### 32.138.6.12 RoutingLegKeyList\_T stdair::SegmentDate::\_routingLegKeyList [protected]

List of routing leg keys.

Definition at line 368 of file [SegmentDate.hpp](#).

Referenced by [addLegKey\(\)](#), and [getLegKeyList\(\)](#).

- class [boost::serialization::access](#)

### 32.139.1 Detailed Description

Key of a given segment-date, made of an origin and a destination airports.

Definition at line 24 of file [SegmentDateKey.hpp](#).

### 32.139.2 Constructor & Destructor Documentation

#### 32.139.2.1 stdair::SegmentDateKey::SegmentDateKey (const [AirportCode\\_T](#) & *iBoardingPoint*, const [AirportCode\\_T](#) & *iOffPoint*)

Main constructor.

Definition at line 25 of file [SegmentDateKey.cpp](#).

#### 32.139.2.2 stdair::SegmentDateKey::SegmentDateKey (const [SegmentDateKey](#) & *iKey*)

Copy constructor.

Definition at line 31 of file [SegmentDateKey.cpp](#).

#### 32.139.2.3 stdair::SegmentDateKey::~~SegmentDateKey ()

Destructor.

Definition at line 36 of file [SegmentDateKey.cpp](#).

### 32.139.3 Member Function Documentation

#### 32.139.3.1 `const AirportCode_T& stdair::SegmentDateKey::getBoardingPoint () const [inline]`

Get the boarding point.

Definition at line 51 of file [SegmentDateKey.hpp](#).

Referenced by [stdair::SegmentDate::getBoardingPoint\(\)](#), and [stdair::OnDDateKey::getOrigin\(\)](#).

#### 32.139.3.2 `const AirportCode_T& stdair::SegmentDateKey::getOffPoint () const [inline]`

Get the arrival point.

Definition at line 56 of file [SegmentDateKey.hpp](#).

Referenced by [stdair::OnDDateKey::getDestination\(\)](#), and [stdair::SegmentDate::getOffPoint\(\)](#).

#### 32.139.3.3 `void stdair::SegmentDateKey::toStream (std::ostream & ioOut) const [virtual]`

Dump a Business Object Key into an output stream.

##### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 40 of file [SegmentDateKey.cpp](#).

References [toString\(\)](#).

#### 32.139.3.4 `void stdair::SegmentDateKey::fromStream (std::istream & ioIn) [virtual]`

Read a Business Object Key from an input stream.

##### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 45 of file [SegmentDateKey.cpp](#).

#### 32.139.3.5 `const std::string stdair::SegmentDateKey::toString () const [virtual]`

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-date.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 49 of file [SegmentDateKey.cpp](#).

References [stdair::DEFAULT\\_KEY\\_SUB\\_FLD\\_DELIMITER](#).

Referenced by [stdair::SegmentDate::describeKey\(\)](#), [stdair::FlightDate::getSegmentDate\(\)](#), [stdair::BomRetriever::retrieveSegmentDateFromLongKey\(\)](#), and [toStream\(\)](#).

**32.139.3.6** `template<class Archive > void stdair::SegmentDateKey::serialize (Archive & ar, const unsigned int iFileVersion) [inline]`

Serialisation.

Definition at line 72 of file [SegmentDateKey.cpp](#).

### 32.139.4 Friends And Related Function Documentation

**32.139.4.1** `friend class boost::serialization::access [friend]`

Definition at line 25 of file [SegmentDateKey.hpp](#).

The documentation for this struct was generated from the following files:

#### 32.140.1 Detailed Description

Class representing the actual attributes for an airline segment-period.

Definition at line 15 of file [SegmentPeriod.hpp](#).

#### 32.140.2 Member Typedef Documentation

##### 32.140.2.1 typedef SegmentPeriodKey stdair::SegmentPeriod::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 23 of file [SegmentPeriod.hpp](#).

### 32.140.3 Constructor & Destructor Documentation

#### 32.140.3.1 stdair::SegmentPeriod::SegmentPeriod (const Key\_T & iKey) [protected]

Main constructor.

Definition at line 13 of file [SegmentPeriod.cpp](#).

#### 32.140.3.2 stdair::SegmentPeriod::~~SegmentPeriod () [protected, virtual]

Destructor.

Definition at line 29 of file [SegmentPeriod.cpp](#).

### 32.140.4 Member Function Documentation

#### 32.140.4.1 const Key\_T& stdair::SegmentPeriod::getKey () const [inline]

Get the segment-period key.

Definition at line 28 of file [SegmentPeriod.hpp](#).

References [\\_key](#).

#### 32.140.4.2 BomAbstract\* const stdair::SegmentPeriod::getParent () const [inline]

Get the parent object.

Definition at line 31 of file [SegmentPeriod.hpp](#).

References [\\_parent](#).

#### 32.140.4.3 const AirportCode\_T& stdair::SegmentPeriod::getBoardingPoint () const [inline]

Get the boarding point (part of the primary key).

Definition at line 34 of file [SegmentPeriod.hpp](#).

References [\\_key](#), and [stdair::SegmentPeriodKey::getBoardingPoint\(\)](#).

#### 32.140.4.4 const AirportCode\_T& stdair::SegmentPeriod::getOffPoint () const [inline]

Get the off point (part of the primary key).

Definition at line 39 of file [SegmentPeriod.hpp](#).

References [\\_key](#), and [stdair::SegmentPeriodKey::getOffPoint\(\)](#).

#### 32.140.4.5 const Duration\_T& stdair::SegmentPeriod::getBoardingTime () const [inline]

Get the boarding time.

Definition at line 42 of file [SegmentPeriod.hpp](#).

References [\\_boardingTime](#).

**32.140.4.6 const Duration\_T& stdair::SegmentPeriod::getOffTime () const [inline]**

Get the off time.

Definition at line 45 of file [SegmentPeriod.hpp](#).

References [\\_offTime](#).

**32.140.4.7 const DateOffset\_T& stdair::SegmentPeriod::getBoardingDateOffset () const [inline]**

Get the boarding date offset.

Definition at line 48 of file [SegmentPeriod.hpp](#).

References [\\_boardingDateOffset](#).

**32.140.4.8 const DateOffset\_T& stdair::SegmentPeriod::getOffDateOffset () const [inline]**

Get the off date offset.

Definition at line 53 of file [SegmentPeriod.hpp](#).

References [\\_offDateOffset](#).

**32.140.4.9 const Duration\_T& stdair::SegmentPeriod::getElapsedTime () const [inline]**

Get the elapsed time.

Definition at line 56 of file [SegmentPeriod.hpp](#).

References [\\_elapsedTime](#).

**32.140.4.10 const CabinBookingClassMap\_T& stdair::SegmentPeriod::getCabinBookingClassMap () const [inline]**

Get the cabin booking class map.

Definition at line 59 of file [SegmentPeriod.hpp](#).

References [\\_cabinBookingClassMap](#).

**32.140.4.11 const HolderMap\_T& stdair::SegmentPeriod::getHolderMap () const [inline]**

Get the map of children holders.

Definition at line 64 of file [SegmentPeriod.hpp](#).

References [\\_holderMap](#).

**32.140.4.12 void stdair::SegmentPeriod::setBoardingTime (const Duration\_T & *iBoardingTime*) [inline]**

Set the boarding time.

Definition at line 69 of file [SegmentPeriod.hpp](#).

References [\\_boardingTime](#).

**32.140.4.13** void stdair::SegmentPeriod::setOffTime (const Duration\_T & *iOffTime*) [inline]

Set the off time.

Definition at line 74 of file [SegmentPeriod.hpp](#).

References [\\_offTime](#).

**32.140.4.14** void stdair::SegmentPeriod::setBoardingDateOffset (const DateOffset\_T & *iDateOffset*) [inline]

Set the boarding date offset.

Definition at line 77 of file [SegmentPeriod.hpp](#).

References [\\_boardingDateOffset](#).

**32.140.4.15** void stdair::SegmentPeriod::setOffDateOffset (const DateOffset\_T & *iDateOffset*) [inline]

Set the off date offset.

Definition at line 82 of file [SegmentPeriod.hpp](#).

References [\\_offDateOffset](#).

**32.140.4.16** void stdair::SegmentPeriod::setElapsedTime (const Duration\_T & *iElapsedTime*) [inline]

Set the elapsed time.

Definition at line 87 of file [SegmentPeriod.hpp](#).

References [\\_elapsedTime](#).

**32.140.4.17** void stdair::SegmentPeriod::addCabinBookingClassList (const CabinCode\_T & *iCabinCode*, const ClassList\_String\_T & *iClassCodeList*)

Add a pair cabin code and list of class codes within the cabin to the cabin booking class map.

Definition at line 41 of file [SegmentPeriod.cpp](#).

References [\\_cabinBookingClassMap](#).

**32.140.4.18** void stdair::SegmentPeriod::toStream (std::ostream & *ioOut*) const [inline, virtual]

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 100 of file [SegmentPeriod.hpp](#).

References [toString\(\)](#).

**32.140.4.19** `void stdair::SegmentPeriod::fromStream (std::istream & ioIn) [inline, virtual]`

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 104 of file [SegmentPeriod.hpp](#).

**32.140.4.20** `std::string stdair::SegmentPeriod::toString () const [virtual]`

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 33 of file [SegmentPeriod.cpp](#).

References [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

**32.140.4.21** `const std::string stdair::SegmentPeriod::describeKey () const [inline]`

Get a string describing the key.

Definition at line 110 of file [SegmentPeriod.hpp](#).

References [\\_key](#), and [stdair::SegmentPeriodKey::toString\(\)](#).

Referenced by [toString\(\)](#).

Definition at line 18 of file [SegmentPeriodKey.cpp](#).

#### 32.141.2.3 stdair::SegmentPeriodKey::~~SegmentPeriodKey ()

Destructor.

Definition at line 23 of file [SegmentPeriodKey.cpp](#).

### 32.141.3 Member Function Documentation

#### 32.141.3.1 const AirportCode\_T& stdair::SegmentPeriodKey::getBoardingPoint () const [inline]

Get the boarding point.

Definition at line 29 of file [SegmentPeriodKey.hpp](#).

Referenced by [stdair::SegmentPeriod::getBoardingPoint\(\)](#).

#### 32.141.3.2 const AirportCode\_T& stdair::SegmentPeriodKey::getOffPoint () const [inline]

Get the arrival point.

Definition at line 34 of file [SegmentPeriodKey.hpp](#).

Referenced by [stdair::SegmentPeriod::getOffPoint\(\)](#).

#### 32.141.3.3 void stdair::SegmentPeriodKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 27 of file [SegmentPeriodKey.cpp](#).

References [toString\(\)](#).

#### 32.141.3.4 void stdair::SegmentPeriodKey::fromStream (std::istream & ioln) [virtual]

Read a Business Object Key from an input stream.

##### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 32 of file [SegmentPeriodKey.cpp](#).

#### 32.141.3.5 const std::string stdair::SegmentPeriodKey::toString () const [virtual]

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-period.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 36 of file [SegmentPeriodKey.cpp](#).

Referenced by [stdair::SegmentPeriod::describeKey\(\)](#), and [toStream\(\)](#).

The documentation for this struct was generated from the following files:

- class [FacBom](#)
- class [FacBomManager](#)
- class [boost::serialization::access](#)

### 32.142.1 Detailed Description

Class representing the actual attributes for an airline segment data tables.

Definition at line 31 of file [SegmentSnapshotTable.hpp](#).

### 32.142.2 Member Typedef Documentation

#### 32.142.2.1 typedef SegmentSnapshotTableKey stdair::SegmentSnapshotTable::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 41 of file [SegmentSnapshotTable.hpp](#).

### 32.142.3 Constructor & Destructor Documentation

#### 32.142.3.1 stdair::SegmentSnapshotTable::SegmentSnapshotTable (const Key\_T & iKey) [protected]

Main constructor.

Definition at line 34 of file [SegmentSnapshotTable.cpp](#).

#### 32.142.3.2 stdair::SegmentSnapshotTable::~~SegmentSnapshotTable () [protected, virtual]

Destructor.

Definition at line 38 of file [SegmentSnapshotTable.cpp](#).

### 32.142.4 Member Function Documentation

#### 32.142.4.1 const Key\_T& stdair::SegmentSnapshotTable::getKey () const [inline]

Get the segment data table key.

Definition at line 47 of file [SegmentSnapshotTable.hpp](#).

References [\\_key](#).

#### 32.142.4.2 BomAbstract\* const stdair::SegmentSnapshotTable::getParent () const [inline]

Get the parent object.

Definition at line 52 of file [SegmentSnapshotTable.hpp](#).

References [\\_parent](#).

**32.142.4.3 const TableID\_T& stdair::SegmentSnapshotTable::getTableID () const [inline]**

Get the table ID (part of the primary key).

Definition at line 57 of file [SegmentSnapshotTable.hpp](#).

References [\\_key](#), and [stdair::SegmentSnapshotTableKey::getTableID\(\)](#).

**32.142.4.4 const HolderMap\_T& stdair::SegmentSnapshotTable::getHolderMap () const [inline]**

Get the map of children holders.

Definition at line 64 of file [SegmentSnapshotTable.hpp](#).

References [\\_holderMap](#).

**32.142.4.5 const SegmentCabinIndexMap\_T& stdair::SegmentSnapshotTable::getSegmentCabinIndexMap () const [inline]**

Get the segment-cabin index map.

Definition at line 69 of file [SegmentSnapshotTable.hpp](#).

References [\\_segmentCabinIndexMap](#).

**32.142.4.6 const ClassIndexMap\_T& stdair::SegmentSnapshotTable::getClassIndexMap () const [inline]**

Get the class index map.

Definition at line 74 of file [SegmentSnapshotTable.hpp](#).

References [\\_classIndexMap](#).

**32.142.4.7 const ClassIndex\_T & stdair::SegmentSnapshotTable::getClassIndex (const MapKey\_T & iKey) const**

Get the index corresponding to the given class.

Definition at line 88 of file [SegmentSnapshotTable.cpp](#).

References [\\_classIndexMap](#).

**32.142.4.8 const SegmentDataID\_T & stdair::SegmentSnapshotTable::getSegmentDataID (const SegmentCabin & iSegmentCabin) const**

Get the segment data ID corresponding to the givent segment-cabin.

Definition at line 97 of file [SegmentSnapshotTable.cpp](#).

References [\\_segmentCabinIndexMap](#).

**32.142.4.9 ConstSegmentCabinDTDSnapshotView\_T**  
**stdair::SegmentSnapshotTable::getConstSegmentCabinDTDBookingSnapshotView**  
 (const SegmentDataID\_T *iSCIdxBegin*, const SegmentDataID\_T *iSCIdxEnd*, const  
 DTD\_T *iDTD*) const

Get the const view of snapshots for a given DTD and a range of segment-cabins.

Definition at line 106 of file [SegmentSnapshotTable.cpp](#).

References [\\_bookingSnapshotBlock](#), and [\\_classIndexMap](#).

**32.142.4.10 ConstSegmentCabinDTDRangeSnapshotView\_T**  
**stdair::SegmentSnapshotTable::getConstSegmentCabinDTDRangeBookingSnapshotView**  
 (const SegmentDataID\_T *iSCIdxBegin*, const SegmentDataID\_T *iSCIdxEnd*, const  
 DTD\_T *iDTDBegin*, const DTD\_T *iDTDEnd*) const

Get the const view of snapshots for a given range of DTD and a range of segment-cabins.

Definition at line 119 of file [SegmentSnapshotTable.cpp](#).

**32.142.4.11 SegmentCabinDTDSnapshotView\_T**  
**stdair::SegmentSnapshotTable::getSegmentCabinDTDBookingSnapshotView** (const  
 SegmentDataID\_T *iSCIdxBegin*, const SegmentDataID\_T *iSCIdxEnd*, const DTD\_T  
*iDTD*)

Get the view of snapshots for a given DTD and a range of segment-cabins.

Definition at line 130 of file [SegmentSnapshotTable.cpp](#).

References [\\_bookingSnapshotBlock](#), and [\\_classIndexMap](#).

**32.142.4.12 SegmentCabinDTDRangeSnapshotView\_T**  
**stdair::SegmentSnapshotTable::getSegmentCabinDTDRangeBookingSnapshotView**  
 (const SegmentDataID\_T *iSCIdxBegin*, const SegmentDataID\_T *iSCIdxEnd*, const  
 DTD\_T *iDTDBegin*, const DTD\_T *iDTDEnd*)

Get the view of snapshots for a given range of DTD and a range of segment-cabins.

Definition at line 142 of file [SegmentSnapshotTable.cpp](#).

References [\\_bookingSnapshotBlock](#), and [\\_classIndexMap](#).

**32.142.4.13 ConstSegmentCabinDTDSnapshotView\_T**  
**stdair::SegmentSnapshotTable::getConstSegmentCabinDTDCancellationSnapshotView**  
 (const SegmentDataID\_T *iSCIdxBegin*, const SegmentDataID\_T *iSCIdxEnd*, const  
 DTD\_T *iDTD*) const

Get the const view of snapshots for a given DTD and a range of segment-cabins.

Definition at line 155 of file [SegmentSnapshotTable.cpp](#).

References [\\_cancellationSnapshotBlock](#), and [\\_classIndexMap](#).

**32.142.4.14** **ConstSegmentCabinDTDRangeSnapshotView\_T**  
**stdair::SegmentSnapshotTable::getConstSegmentCabinDTDRangeCancellationSnapshotView**  
(const SegmentDataID\_T *iSCIdxBegin*, const SegmentDataID\_T *iSCIdxEnd*, const  
DTD\_T *iDTDBegin*, const DTD\_T *iDTDEnd*) const

Get the const view of snapshots for a given range of DTD and a range of segment-cabins.

Definition at line 168 of file [SegmentSnapshotTable.cpp](#).

**32.142.4.15** **SegmentCabinDTDSnapshotView\_T**  
**stdair::SegmentSnapshotTable::getSegmentCabinDTDCancellationSnapshotView**  
(const SegmentDataID\_T *iSCIdxBegin*, const SegmentDataID\_T *iSCIdxEnd*, const  
DTD\_T *iDTD*)

Get the view of snapshots for a given DTD and a range of segment-cabins.

Definition at line 179 of file [SegmentSnapshotTable.cpp](#).

References [\\_cancellationSnapshotBlock](#), and [\\_classIndexMap](#).

**32.142.4.16** **SegmentCabinDTDRangeSnapshotView\_T**  
**stdair::SegmentSnapshotTable::getSegmentCabinDTDRangeCancellationSnapshotView**  
(const SegmentDataID\_T *iSCIdxBegin*, const SegmentDataID\_T *iSCIdxEnd*, const  
DTD\_T *iDTDBegin*, const DTD\_T *iDTDEnd*)

Get the view of snapshots for a given range of DTD and a range of segment-cabins.

Definition at line 191 of file [SegmentSnapshotTable.cpp](#).

References [\\_cancellationSnapshotBlock](#), and [\\_classIndexMap](#).

**32.142.4.17** **ConstSegmentCabinDTDSnapshotView\_T**  
**stdair::SegmentSnapshotTable::getConstSegmentCabinDTDProductOrientedNetBookingSnapshotView**  
(const SegmentDataID\_T *iSCIdxBegin*, const SegmentDataID\_T *iSCIdxEnd*, const  
DTD\_T *iDTD*) const

Get the const view of snapshots for a given DTD and a range of segment-cabins.

Definition at line 204 of file [SegmentSnapshotTable.cpp](#).

References [\\_classIndexMap](#), and [\\_productOrientedNetBookingSnapshotBlock](#).

**32.142.4.18** **ConstSegmentCabinDTDRangeSnapshotView\_T**

Definition at line 437 of file [SegmentSnapshotTable.cpp](#).

References [\\_availabilitySnapshotBlock](#), and [\\_classIndexMap](#).

**32.142.4.37** `void stdair::SegmentSnapshotTable::initSnapshotBlocks (const`  
**SegmentCabinIndexMap\_T & iSegmentCabinIndexMap, const ClassIndexMap\_T &**  
**iClassIndexMap)**

Set the segment-cabin and value type index maps and initialise the snapshot blocks.

Definition at line 50 of file [SegmentSnapshotTable.cpp](#).

References [\\_availabilitySnapshotBlock](#), [\\_bookingSnapshotBlock](#), [\\_cancellationSnapshotBlock](#), [\\_classIndexMap](#), [\\_priceOrientedGrossBookingSnapshotBlock](#), [\\_priceOrientedNetBookingSnapshotBlock](#), [\\_productOrientedGrossBookingSnapshotBlock](#), [\\_productOrientedNetBookingSnapshotBlock](#), [\\_segmentCabinIndexMap](#), and [stdair::DEFAULT\\_MAX\\_DTD](#).

**32.142.4.38** `void stdair::SegmentSnapshotTable::toStream (std::ostream & ioOut) const`  
**[inline, virtual]**

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 283 of file [SegmentSnapshotTable.hpp](#).

References [toString\(\)](#).

**32.142.4.39** `void stdair::SegmentSnapshotTable::fromStream (std::istream & ioIn) [inline, virtual]`

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 292 of file [SegmentSnapshotTable.hpp](#).

**32.142.4.40** `std::string stdair::SegmentSnapshotTable::toString () const [virtual]`

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 42 of file [SegmentSnapshotTable.cpp](#).

References [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

**32.142.4.41** `const std::string stdair::SegmentSnapshotTable::describeKey () const [inline]`

Get a string describing the key.

Definition at line 303 of file [SegmentSnapshotTable.hpp](#).

References [\\_key](#), and [stdair::SegmentSnapshotTableKey::toString\(\)](#).

Referenced by [toString\(\)](#).

**32.142.4.42** `template<class Archive > void stdair::SegmentSnapshotTable::serialize (Archive & ar, const unsigned int iFileVersion) [inline]`

Serialisation.

Definition at line 464 of file [SegmentSnapshotTable.cpp](#).

References [\\_key](#).

## 32.142.5 Friends And Related Function Documentation

**32.142.5.1** `friend class FacBom [friend]`

- [~SegmentSnapshotTableKey](#) ()
- const [TableID\\_T](#) & [getTableID](#) () const
- void [toStream](#) (std::ostream &ioOut) const
- void [fromStream](#) (std::istream &ioIn)
- const std::string [toString](#) () const
- template<class Archive >  
void [serialize](#) (Archive &ar, const unsigned int iFileVersion)

## Friends

- class [boost::serialization::access](#)

### 32.143.1 Detailed Description

Key of a given guillotine block, made of a guillotine number.

Definition at line 26 of file [SegmentSnapshotTableKey.hpp](#).

### 32.143.2 Constructor & Destructor Documentation

#### 32.143.2.1 stdair::SegmentSnapshotTableKey::SegmentSnapshotTableKey (const TableID\_T & iTableID)

Constructor.

Definition at line 26 of file [SegmentSnapshotTableKey.cpp](#).

#### 32.143.2.2 stdair::SegmentSnapshotTableKey::SegmentSnapshotTableKey (const SegmentSnapshotTableKey & iKey)

Copy constructor.

Definition at line 31 of file [SegmentSnapshotTableKey.cpp](#).

#### 32.143.2.3 stdair::SegmentSnapshotTableKey::~~SegmentSnapshotTableKey ()

Destructor.

Definition at line 36 of file [SegmentSnapshotTableKey.cpp](#).

### 32.143.3 Member Function Documentation

#### 32.143.3.1 const TableID\_T& stdair::SegmentSnapshotTableKey::getTableID () const [inline]

Get the table ID.

Definition at line 56 of file [SegmentSnapshotTableKey.hpp](#).

Referenced by [stdair::SegmentSnapshotTable::getTableID\(\)](#).

#### 32.143.3.2 void stdair::SegmentSnapshotTableKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

## Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 40 of file [SegmentSnapshotTableKey.cpp](#).

References [toString\(\)](#).

### 32.143.3.3 void stdair::SegmentSnapshotTableKey::fromStream (std::istream & *ioIn*) [virtual]

Read a Business Object Key from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 45 of file [SegmentSnapshotTableKey.cpp](#).

### 32.143.3.4 const std::string stdair::SegmentSnapshotTableKey::toString () const [virtual]

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-block.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 49 of file [SegmentSnapshotTableKey.cpp](#).

Referenced by [stdair::SegmentSnapshotTable::describeKey\(\)](#), and [toStream\(\)](#).

### 32.143.3.5 template<class Archive > void stdair::SegmentSnapshotTableKey::serialize (Archive & *ar*, const unsigned int *iFileVersion*) [inline]

Serialisation.

Definition at line 71 of file [SegmentSnapshotTableKey.cpp](#).

## 32.143.4 Friends And Related Function Documentation

### 32.143.4.1 friend class boost::serialization::access [friend]

Definition at line 27 of file [SegmentSnapshotTableKey.hpp](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/SegmentSnapshotTableKey.hpp](#)
- [stdair/bom/SegmentSnapshotTableKey.cpp](#)

*BUILTIN\_SAMPLE*  
*LAST\_VALUE*

Definition at line 19 of file [ServiceInitialisationType.hpp](#).

### 32.146.3 Constructor & Destructor Documentation

#### 32.146.3.1 stdair::ServiceInitialisationType::ServiceInitialisationType (const [EN\\_ServiceInitialisationType](#) & iServiceInitialisationType)

Main constructor.

Definition at line 36 of file [ServiceInitialisationType.cpp](#).

**32.146.3.2 stdair::ServiceInitialisationType::ServiceInitialisationType (const char *iType*)**

Alternative constructor.

Definition at line 65 of file [ServiceInitialisationType.cpp](#).

**32.146.3.3 stdair::ServiceInitialisationType::ServiceInitialisationType (const std::string & *iType*)**

Alternative constructor.

Definition at line 71 of file [ServiceInitialisationType.cpp](#).

References [getType\(\)](#).

**32.146.3.4 stdair::ServiceInitialisationType::ServiceInitialisationType (const ServiceInitialisationType & *iServiceInitialisationType*)**

Default copy constructor.

Definition at line 30 of file [ServiceInitialisationType.cpp](#).

**32.146.4 Member Function Documentation****32.146.4.1 const std::string & stdair::ServiceInitialisationType::getLabel (const EN\_ServiceInitialisationType & *iType*) [static]**

Get the label as a string (e.g., "Not yet initialised", "File parsing" or "Built-in sample BOM").

Definition at line 81 of file [ServiceInitialisationType.cpp](#).

**32.146.4.2 ServiceInitialisationType::EN\_ServiceInitialisationType  
stdair::ServiceInitialisationType::getType (const char *iTypeChar*) [static]**

Get the type value from parsing a single char (e.g., 'N', 'F', 'B').

Definition at line 42 of file [ServiceInitialisationType.cpp](#).

References [BUILTIN\\_SAMPLE](#), [describeLabels\(\)](#), [FILE\\_PARSING](#), [LAST\\_VALUE](#), and [NOT\\_YET\\_INITIALISED](#).

**32.146.4.3 char stdair::ServiceInitialisationType::getTypeLabel (const EN\_ServiceInitialisationType & *iType*) [static]**

Get the label as a single char (e.g., 'N', 'F', 'B').

Definition at line 87 of file [ServiceInitialisationType.cpp](#).

**32.146.4.4 std::string stdair::ServiceInitialisationType::getTypeLabelAsString (const EN\_ServiceInitialisationType & *iType*) [static]**

Get the label as a string of a single char (e.g., "N", "F", "B").

Definition at line 93 of file [ServiceInitialisationType.cpp](#).

**32.146.4.5 std::string stdair::ServiceInitialisationType::describeLabels () [static]**

List the labels.

Definition at line 100 of file [ServiceInitialisationType.cpp](#).

References [LAST\\_VALUE](#).

Referenced by [getType\(\)](#).

**32.146.4.6 ServiceInitialisationType::EN\_ServiceInitialisationType  
stdair::ServiceInitialisationType::getType () const**

Get the enumerated value.

Definition at line 113 of file [ServiceInitialisationType.cpp](#).

Referenced by [ServiceInitialisationType\(\)](#).

**32.146.4.7 char stdair::ServiceInitialisationType::getTypeAsChar () const**

Get the enumerated value as a short string (e.g., 'N', 'F', 'B').

Definition at line 118 of file [ServiceInitialisationType.cpp](#).

**32.146.4.8 std::string stdair::ServiceInitialisationType::getTypeAsString () const**

Get the enumerated value as a short string (e.g., "N", "F", "B").

Definition at line 124 of file [ServiceInitialisationType.cpp](#).

**32.146.4.9 const std::string stdair::ServiceInitialisationType::describe () const [virtual]**

Give a description of the structure (e.g., "Not yet initialised", "File parsing" or "Built-in sample BOM").

Implements [stdair::StructAbstract](#).

Definition at line 131 of file [ServiceInitialisationType.cpp](#).

**32.146.4.10 bool stdair::ServiceInitialisationType::operator== (const  
EN\_ServiceInitialisationType & iType) const**

Comparison operator.

Definition at line 139 of file [ServiceInitialisationType.cpp](#).

**32.146.4.11 void stdair::StructAbstract::toStream (std::ostream & ioOut) const [inline,  
inherited]**

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 29 of file [StructAbstract.hpp](#).

References [stdair::StructAbstract::describe\(\)](#).

#### 32.146.4.12 virtual void stdair::StructAbstract::fromStream (std::istream & ioIn) [inline, virtual, inherited]

Read a Business Object from an input stream.

##### Parameters:

*istream&* the input stream.

Reimplemented in [stdair::ProgressStatusSet](#), [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::EventStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 38 of file [StructAbstract.hpp](#).

Referenced by [operator>>\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/basic/ServiceInitialisationType.hpp](#)
- [stdair/basic/ServiceInitialisationType.cpp](#)

## 32.147 stdair::SimpleNestingStructException Class Reference

- class [FacBom](#)
- class [FacBomManager](#)
- class [boost::serialization::access](#)

### 32.148.1 Detailed Description

Structure holding a nesting node map according to the yield.

Definition at line 26 of file [SimpleNestingStructure.hpp](#).

### 32.148.2 Member Typedef Documentation

#### 32.148.2.1 typedef NestingStructureKey stdair::SimpleNestingStructure::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 36 of file [SimpleNestingStructure.hpp](#).

### 32.148.3 Constructor & Destructor Documentation

#### 32.148.3.1 stdair::SimpleNestingStructure::SimpleNestingStructure (const Key\_T & iKey)

Main constructor.

Definition at line 36 of file [SimpleNestingStructure.cpp](#).

#### 32.148.3.2 stdair::SimpleNestingStructure::~~SimpleNestingStructure () [virtual]

Destructor.

Definition at line 41 of file [SimpleNestingStructure.cpp](#).

### 32.148.4 Member Function Documentation

#### 32.148.4.1 const Key\_T& stdair::SimpleNestingStructure::getKey () const [inline]

Get the nesting key.

Definition at line 41 of file [SimpleNestingStructure.hpp](#).

#### 32.148.4.2 BomAbstract\* const stdair::SimpleNestingStructure::getParent () const [inline]

Get the parent object.

Definition at line 46 of file [SimpleNestingStructure.hpp](#).

#### 32.148.4.3 const HolderMap\_T& stdair::SimpleNestingStructure::getHolderMap () const [inline]

Get the map of children holders.

Definition at line 53 of file [SimpleNestingStructure.hpp](#).

#### 32.148.4.4 const NestingNodeList\_T & stdair::SimpleNestingStructure::getNestingNodeList () const

Get the nesting node list

Definition at line 115 of file [SimpleNestingStructure.cpp](#).

#### 32.148.4.5 void stdair::SimpleNestingStructure::toStream (std::ostream & ioOut) const [inline, virtual]

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 69 of file [SimpleNestingStructure.hpp](#).

References [toString\(\)](#).

**32.148.4.6** void stdair::SimpleNestingStructure::fromStream (std::istream & *ioIn*) [inline, virtual]

Read a Business Object from an input stream.

#### Parameters:

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 78 of file [SimpleNestingStructure.hpp](#).

**32.148.4.7** std::string stdair::SimpleNestingStructure::toString () const [virtual]

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 107 of file [SimpleNestingStructure.cpp](#).

References [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

**32.148.4.8** const std::string stdair::SimpleNestingStructure::describeKey () const [inline]

Get a string describing the key.

Definition at line 89 of file [SimpleNestingStructure.hpp](#).

References [stdair::NestingStructureKey::toString\(\)](#).

Referenced by [toString\(\)](#).

**32.148.4.9** template<class Archive > void stdair::SimpleNestingStructure::serialize (Archive & *ar*, const unsigned int *iFileVersion*) [inline]

Serialisation.

### 32.148.5 Friends And Related Function Documentation

**32.148.5.1** friend class FacBom [friend]

Definition at line 27 of file [SimpleNestingStructure.hpp](#).

**32.148.5.2** friend class FacBomManager [friend]

Definition at line 28 of file [SimpleNestingStructure.hpp](#).

### 32.148.5.3 friend class boost::serialization::access [friend]

Definition at line 29 of file [SimpleNestingStructure.hpp](#).

The documentation for this class was generated from the following files:

- [stdair/bom/SimpleNestingStructure.hpp](#)
- [stdair/bom/SimpleNestingStructure.cpp](#)

## 32.149 **swift::SKeymap Class Reference**

The readline keymap wrapper.

```
#include <stdair/ui/cmdline/SReadline.hpp>
```

### Public Member Functions

- [SKeymap](#) (bool PrintableBound=false)  
*Creates a new keymap.*
- [SKeymap](#) (Keymap Pattern)  
*Creates a new keymap which is a copy of Pattern.*
- [~SKeymap](#) ()  
*Frees the allocated keymap.*
- void [Bind](#) (int Key, KeyCallback Callback)  
*Binds the given key to a function.*
- void [Unbind](#) (int Key)  
*Unbinds the given key.*
- [SKeymap](#) (const [SKeymap](#) &rhs)  
*Copy constructor.*
- [SKeymap](#) & [operator=](#) (const [SKeymap](#) &rhs)  
*operator=*

### Friends

- class [SReadline](#)

### 32.149.1 Detailed Description

The readline keymap wrapper. Attention: It is not thread safe! Supports: key binding, key unbinding

Definition at line 307 of file [SReadline.hpp](#).

## 32.149.2 Constructor & Destructor Documentation

### 32.149.2.1 swift::SKeymap::SKeymap (bool *PrintableBound* = false) [inline, explicit]

Creates a new keymap.

#### Parameters:

*PrintableBound* if true - the printable characters are bound if false - the keymap is empty

Definition at line 319 of file [SReadline.hpp](#).

### 32.149.2.2 swift::SKeymap::SKeymap (Keymap *Pattern*) [inline, explicit]

Creates a new keymap which is a copy of Pattern.

#### Parameters:

*Pattern* A keymap to be copied.

Definition at line 342 of file [SReadline.hpp](#).

### 32.149.2.3 swift::SKeymap::~~SKeymap () [inline]

Frees the allocated keymap.

Definition at line 354 of file [SReadline.hpp](#).

### 32.149.2.4 swift::SKeymap::SKeymap (const SKeymap & *rhs*) [inline]

Copy constructor.

#### Parameters:

*rhs* Right hand side object of [SKeymap](#)

Definition at line 395 of file [SReadline.hpp](#).

## 32.149.3 Member Function Documentation

### 32.149.3.1 void swift::SKeymap::Bind (int *Key*, KeyCallback *Callback*) [inline]

Binds the given key to a function.

#### Parameters:

*Key* A key to be bound

**Callback** A function to be called when the Key is pressed

Definition at line 366 of file [SReadline.hpp](#).

### 32.149.3.2 void swift::SKeymap::Unbind (int *Key*) [inline]

Unbinds the given key.

#### Parameters:

**Key** A key to be unbound

Definition at line 381 of file [SReadline.hpp](#).

### 32.149.3.3 SKeymap& swift::SKeymap::operator= (const SKeymap & *rhs*) [inline]

operator=

#### Parameters:

**rhs** Right hand side object of [SKeymap](#)

Definition at line 407 of file [SReadline.hpp](#).

## 32.149.4 Friends And Related Function Documentation

### 32.149.4.1 friend class SReadline [friend]

### 32.153.1 Detailed Description

The readline library wrapper. Attention: It is not thread safe! Supports: editing, history, custom completers  
Definition at line 424 of file [SReadline.hpp](#).

### 32.153.2 Constructor & Destructor Documentation

#### 32.153.2.1 swift::SReadline::SReadline (const size\_t *Limit* = DefaultHistoryLimit) [inline]

Constructs the object, sets the completion function.

##### Parameters:

*Limit* History size

Definition at line 431 of file [SReadline.hpp](#).

#### 32.153.2.2 swift::SReadline::SReadline (const std::string & *historyFileName*, const size\_t *Limit* = DefaultHistoryLimit) [inline]

Constructs the object, sets the completion function, loads history.

##### Parameters:

*historyFileName* File name to load history from

*Limit* History size

Definition at line 446 of file [SReadline.hpp](#).

References [LoadHistory\(\)](#).

### 32.153.2.3 swift::SReadline::~~SReadline () [inline]

Saves the session history (if the file name was provided) and destroys the object.

Definition at line 462 of file [SReadline.hpp](#).

References [SaveHistory\(\)](#).

## 32.153.3 Member Function Documentation

### 32.153.3.1 std::string swift::SReadline::GetLine (const std::string & *Prompt*) [inline]

Gets a single line from a user.

#### Parameters:

*Prompt* A printed prompt

#### Returns:

A string which was actually inputed

Definition at line 473 of file [SReadline.hpp](#).

Referenced by [GetLine\(\)](#).

### 32.153.3.2 template<typename Container > std::string swift::SReadline::GetLine (const std::string & *Prompt*, Container & *ReadTokens*) [inline]

Gets a single line from a user.

#### Parameters:

*Prompt* A printed prompt

*ReadTokens* A user inputed string splitted into tokens. The container is cleared first

#### Returns:

A string which was actually inputed

Definition at line 487 of file [SReadline.hpp](#).

References [GetLine\(\)](#).

### 32.153.3.3 template<typename Container > std::string swift::SReadline::GetLine (const std::string & *Prompt*, Container & *ReadTokens*, bool & *BreakOut*) [inline]

Gets a single line from a user.

**Parameters:**

*Prompt* A printed prompt

*BreakOut* it is set to true if the EOF found

*ReadTokens* A user inputted string splitted into tokens. The container is cleared first

**Returns:**

A string which was actually inputted

Definition at line 502 of file [SReadline.hpp](#).

References [GetLine\(\)](#).

### 32.153.3.4 `std::string swift::SReadline::GetLine (const std::string & Prompt, bool & BreakOut) [inline]`

Gets a single line from a user.

**Parameters:**

*Prompt* A printed prompt

*BreakOut* it is set to true if the EOF found

**Returns:**

A string which was actually inputted

Definition at line 517 of file [SReadline.hpp](#).

### 32.153.3.5 `template<typename ContainerType > void swift::SReadline::GetHistory (ContainerType & Container) [inline]`

Fills the given container with the current history list. Does not clear the given container

Definition at line 552 of file [SReadline.hpp](#).

### 32.153.3.6 `bool swift::SReadline::SaveHistory (std::ostream & OS) [inline]`

Saves the history to the given file stream.

**Parameters:**

*OS* output file stream

**Returns:**

true if success

Definition at line 564 of file [SReadline.hpp](#).

Referenced by [SaveHistory\(\)](#), and [~SReadline\(\)](#).

**32.153.3.7 bool swift::SReadline::SaveHistory (const std::string & *FileName*) [inline]**

Saves the history to the given file.

**Parameters:**

*FileName* File name to save the history to

**Returns:**

true if success

Definition at line 581 of file [SReadline.hpp](#).

References [SaveHistory\(\)](#).

**32.153.3.8 void swift::SReadline::ClearHistory () [inline]**

Clears the history. Does not affect the file where the previous session history is saved.

Definition at line 594 of file [SReadline.hpp](#).

Referenced by [LoadHistory\(\)](#).

**32.153.3.9 bool swift::SReadline::LoadHistory (std::istream & *IS*) [inline]**

Loads a history from a file stream.

**Parameters:**

*IS* Input file stream

**Returns:**

true if success

Definition at line 604 of file [SReadline.hpp](#).

References [ClearHistory\(\)](#).

Referenced by [LoadHistory\(\)](#), and [SReadline\(\)](#).

**32.153.3.10 bool swift::SReadline::LoadHistory (const std::string & *FileName*) [inline]**

Loads a history from the given file.

**Parameters:**

*FileName* File name to be load from

**Returns:**

true if success

Definition at line 629 of file [SReadline.hpp](#).

References [LoadHistory\(\)](#).

**32.153.3.11 template<typename ContainerType > void swift::SReadline::RegisterCompletions (const ContainerType & *Container*) [inline]**

Allows to register custom completers. Supports a special keyword: file. It means to use the standard file name completer.

For example the given container elements could be as follows:

- command1 opt1
- command1 opt2 file
- command2
- command2 opt1

Each container element must describe a single possible command line. The container element must have a conversion to std::string operator.

**Parameters:**

*Container* A container which has all the user possible commands.

Definition at line 658 of file [SReadline.hpp](#).

**32.153.3.12 void swift::SReadline::SetKeymap (SKeymap & *NewKeymap*) [inline]**

Sets the given keymap.

**Parameters:**

*NewKeymap* The keymap that should be used from now.

Definition at line 675 of file [SReadline.hpp](#).

The documentation for this class was generated from the following file:

- stdair/ui/cmdline/[SReadline.hpp](#)

### 32.154.1 Detailed Description

Interface for the STDAIR Services.

Definition at line 44 of file [STDAIR\\_Service.hpp](#).

### 32.154.2 Constructor & Destructor Documentation

#### 32.154.2.1 stdair::STDAIR\_Service::STDAIR\_Service ()

Default constructor.

Definition at line 45 of file [STDAIR\\_Service.cpp](#).

#### 32.154.2.2 stdair::STDAIR\_Service::STDAIR\_Service (const BasLogParams & iLogParams)

Constructor. The init() method is called; see the corresponding documentation for more details.

Moreover, a reference on an output stream is given, so that log outputs can be directed onto that stream.

#### Parameters:

← **const** [BasLogParams](#)& Parameters for the output log stream.

Definition at line 61 of file [STDAIR\\_Service.cpp](#).

#### 32.154.2.3 stdair::STDAIR\_Service::STDAIR\_Service (const BasLogParams & iLogParams, const BasDBParams & iDBParams)

Constructor. The init() method is called; see the corresponding documentation for more details.

A reference on an output stream is given, so that log outputs can be directed onto that stream.

Moreover, database connection parameters are given, so that database events can use the corresponding access.

**Parameters:**

- ← **const** [BasLogParams](#)& Parameters for the output log stream.
- ← **const** [BasDBParams](#)& Parameters for the database session.

Definition at line 75 of file [STDAIR\\_Service.cpp](#).

**32.154.2.4 stdair::STDAIR\_Service::~~STDAIR\_Service ()**

Destructor.

Definition at line 93 of file [STDAIR\\_Service.cpp](#).

**32.154.3 Member Function Documentation****32.154.3.1 void stdair::STDAIR\_Service::buildSampleBom ()**

Build a sample BOM tree, and attach it to the [BomRoot](#) instance.

As for now, a single sample BOM tree is built, with objects for all the simulator-related components, i.e.:

- schedule (e.g., [AirSched](#)),
- inventory (e.g., [AirInv](#)),
- revenue management (e.g., [RMOL](#)),
- pricing (e.g., [SimFQT](#)),
- revenue accounting (e.g., [AirRAC](#)),
- demand generation (e.g., [TraDemGen](#)),
- customer choice (e.g., [TravelCCM](#)),
- event manager (e.g., [SEvMgr](#))

Most of the inventories just contain one flight. One of those flights has two legs (and therefore three segments).

Definition at line 172 of file [STDAIR\\_Service.cpp](#).

**32.154.3.2 void stdair::STDAIR\_Service::buildDummyInventory (const CabinCapacity\_T & iCabinCapacity)**

Build a dummy inventory, containing a dummy flight-date with a single leg-cabin and some virtual booking classes. That structure is the bare minimum required to perform an optimisation on a leg-cabin.

As for now, that method is called only by [RMOL](#). Indeed, the revenue management component ([RMOL](#)) needs very basic set up in order to perform optimisation at leg-level. Hence, there are:

- a dedicated inventory ('XX'),
- the corresponding flight-date (#9999, departing 01/01/1900),

- a leg-date (departing and arriving from/to 'XXX' airport),
- 
- a leg-cabin ('X').
- 

Most of the data is dummy because RMOL uses only the cabin capacity from that part of the BOM tree.

**Parameters:**

*const* CabinCapacity\_T& Cabin capacity for revenue management optimisation.

Definition at line 187 of file [STDAIR\\_Service.cpp](#).

**32.154.3.3 void stdair::STDAIR\_Service::buildDummyLegSegmentAccesses (BomRoot & iBomRoot)**

Build the direct accesses between the dummy segment cabins and the dummy leg cabins within the dummy flight dates (the dummy fare family flight date and the classic dummy flight date).

As for now (May 2012), that method is called only by RMOL. It is a substitute for the code doing it automatically located in AirInv. See the AIRINV::InventoryManager::createDirectAccesses command.

**Parameters:**

*BomRoot&* Top of the BOM tree, to which the sample should be attached.

Definition at line 204 of file [STDAIR\\_Service.cpp](#).

**32.154.3.4 void stdair::STDAIR\_Service::buildSampleTravelSolutionForPricing (TravelSolutionList\_T & ioTravelSolutionList)**

Build a sample list of travel solutions.

As of now (March 2011), that list is made of the following travel solutions:

- BA9
- LHR-SYD
- 2011-06-10

**Parameters:**

*TravelSolutionList\_T&* Sample list of travel solution structures. It should be given empty. It is altered with the returned sample.

Definition at line 215 of file [STDAIR\\_Service.cpp](#).

### 32.154.3.5 void stdair::STDAIR\_Service::buildSampleTravelSolutions (TravelSolutionList\_T & ioTravelSolutionList)

Build a sample list of travel solutions.

As of now (March 2011), that list is made of the following travel solutions:

- BA9
- LHR-SYD
- 2011-06-10
- Q
- WTP: 900
- Change fee: 20; Non refundable; Saturday night stay

#### Parameters:

*TravelSolutionList\_T&* Sample list of travel solution structures. It should be given empty. It is altered with the returned sample.

Definition at line 222 of file [STDAIR\\_Service.cpp](#).

### 32.154.3.6 BookingRequestStruct stdair::STDAIR\_Service::buildSampleBookingRequest (const bool isForCRS = false)

Build a sample booking request structure.

As of now (March 2011), the sample booking request is made of the following parameters:

- Return trip (inbound): LHR-SYD (POS: LHR, Channel: DN),
- Departing 10-JUN-2011 around 8:00, staying 7 days
- Requested on 15-MAY-2011 at 10:00
- Economy cabin, 3 persons, FF member
- WTP: 1000.0 EUR
- Dis-utility: 100.0 EUR/hour

As of now (March 2011), the CRS-related booking request is made of the following parameters:

- Return trip (inbound): SIN-BKK (POS: SIN, Channel: IN),
- Departing 30-JAN-2010 around 10:00, staying 7 days
- Requested on 22-JAN-2010 at 10:00
- Economy cabin, 3 persons, FF member
- WTP: 1000.0 EUR
- Dis-utility: 100.0 EUR/hour

**Parameters:**

**const** bool isForCRS Whether the sample booking request is for CRS.

**Returns:**

[BookingRequestStruct](#)& Sample booking request structure.

Definition at line 229 of file [STDAIR\\_Service.cpp](#).

**32.154.3.7 void stdair::STDAIR\_Service::clonePersistentBom ()**

Clone the persistent Bom.

Definition at line 635 of file [STDAIR\\_Service.cpp](#).

References [stdair::FacSupervisor::cleanCloneBomLayer\(\)](#), and [stdair::FacSupervisor::instance\(\)](#).

**32.154.3.8 std::string stdair::STDAIR\_Service::jsonExportFlightDateList (const AirlineCode\_T & iAirlineCode = "all", const FlightNumber\_T & iFlightNumber = 0) const**

Recursively dump, in the returned string and in JSON format, the flight-date list corresponding to the parameters given as input.

**Parameters:**

**const** AirlineCode& Airline for which the flight-dates should be displayed. If set to "all" (default), all the inventories will be displayed.

**const** FlightNumber\_T& Flight number for which all the departure dates should be displayed. If set to 0 (the default), all the flight numbers will be displayed.

Definition at line 242 of file [STDAIR\\_Service.cpp](#).

**32.154.3.9 std::string stdair::STDAIR\_Service::jsonExportFlightDateObjects (const AirlineCode\_T & iAirlineCode, const FlightNumber\_T & iFlightNumber, const Date\_T & iDepartureDate) const**

Recursively dump, in the returned string and in JSON format, the detailed flight-date (leg, segments, cabins, classes, ...) corresponding to the parameters given as input.

**Parameters:**

**const** AirlineCode\_T& Airline code of the flight to dump.

**const** FlightNumber\_T& Flight number of the flight to dump.

**const** Date\_T& Departure date of the flight to dump.

**Returns:**

std::string Output string in which the BOM tree is JSON-ified.

Definition at line 262 of file [STDAIR\\_Service.cpp](#).

References [stdair::BomRetriever::retrieveFlightDateFromKeySet\(\)](#).

### 32.154.3.10 std::string stdair::STDAIR\_Service::jsonExportEventObject (const EventStruct & iEventStruct) const

Recursively dump, in the returned string and in JSON format, the event object.

#### Returns:

std::string Output string in which the event is JSON-ified.

Definition at line 312 of file [STDAIR\\_Service.cpp](#).

References [stdair::EventType::BKG\\_REQ](#), [stdair::EventType::BRK\\_PT](#), [stdair::EventType::CX](#), [stdair::EventStruct::getEventType\(\)](#), [stdair::BomJSONExport::jsonExportBookingRequestObject\(\)](#), [stdair::BomJSONExport::jsonExportBreakPointObject\(\)](#), [stdair::EventType::OPT\\_NOT\\_4\\_FD](#), [stdair::EventType::OPT\\_NOT\\_4\\_NET](#), [stdair::EventType::RM](#), [stdair::EventType::SKD\\_CHG](#), and [stdair::EventType::SNAPSHOT](#).

### 32.154.3.11 std::string stdair::STDAIR\_Service::jsonExportConfiguration () const

Dump, in the returned string and in JSON format, the configuration.

#### Returns:

std::string Output string in which the configuration tree is JSON-ified.

Definition at line 359 of file [STDAIR\\_Service.cpp](#).

References [stdair::ConfigHolderStruct::jsonExport\(\)](#).

### 32.154.3.12 bool stdair::STDAIR\_Service::jsonImportConfiguration (const JSONString & iJSONString) const

Extract the configuration ptree from the given JSON-formatted string and add it to the configuration holder

#### Parameters:

**const JSONString&** JSON-formatted string.

#### Returns:

bool State whether the extracting has been successful.

Definition at line 342 of file [STDAIR\\_Service.cpp](#).

References [stdair::BomJSONImport::jsonImportConfig\(\)](#).

### 32.154.3.13 std::string stdair::STDAIR\_Service::list (const AirlineCode\_T & iAirlineCode = "a11", const FlightNumber\_T & iFlightNumber = 0) const

Display the list of flight-dates (contained within the BOM tree) corresponding to the parameters given as input.

**Parameters:**

*const* AirlineCode& Airline for which the flight-dates should be displayed. If set to "all" (the default), all the inventories will be displayed.

*const* FlightNumber\_T& Flight number for which all the departure dates should be displayed. If set to 0 (the default), all the flight numbers will be displayed.

**Returns:**

std::string Output string in which the BOM tree is logged/dumped.

Definition at line 428 of file [STDAIR\\_Service.cpp](#).

**32.154.3.14 std::string stdair::STDAIR\_Service::listAirportPairDateRange () const**

Display the list of airports pairs and date ranges (contained within the BOM tree)

**Parameters:**

*std::ostream&* Output stream in which the airport pairs and date ranges are logged/dumped.

Definition at line 446 of file [STDAIR\\_Service.cpp](#).

**32.154.3.15 bool stdair::STDAIR\_Service::check (const AirlineCode\_T & iAirlineCode, const FlightNumber\_T & iFlightNumber, const Date\_T & iDepartureDate) const**

Check whether the given flight-date is a valid one.

**Parameters:**

*const* [stdair::AirlineCode\\_T](#)& Airline code of the flight to check.

*const* [stdair::FlightNumber\\_T](#)& Flight number of the flight to check.

*const* [stdair::Date\\_T](#)& Departure date of the flight to check.

**Returns:**

bool Whether or not the given flight date is valid.

Definition at line 463 of file [STDAIR\\_Service.cpp](#).

References [stdair::BomRetriever::retrieveFlightDateFromKeySet\(\)](#).

**32.154.3.16 bool stdair::STDAIR\_Service::check (const AirportCode\_T & ioOrigin, const AirportCode\_T & ioDestination, const Date\_T & iDepartureDate) const**

Check whether the given couple airportpair-date is a valid one.

**Parameters:**

*const* [stdair::AirportCode\\_T](#)& Origin airport of the fare rule to check.

*const* [stdair::AirportCode\\_T](#)& Destination airport of the fare rule to check.

*const* [stdair::Date\\_T](#)& Departure date of the fare rule to check.

**Returns:**

bool Whether or not the given airportpair-date couple is a valid one.

Definition at line 485 of file [STDAIR\\_Service.cpp](#).

References [stdair::BomRetriever::retrieveDatePeriodListFromKeySet\(\)](#).

**32.154.3.17 std::string stdair::STDAIR\_Service::configDisplay () const**

Display (dump in the returned string) the configuration.

**Returns:**

std::string Output string in which the configuration is logged/dumped.

Definition at line 508 of file [STDAIR\\_Service.cpp](#).

References [stdair::ConfigHolderStruct::describe\(\)](#).

**32.154.3.18 std::string stdair::STDAIR\_Service::csvDisplay () const**

Recursively display (dump in the returned string) the objects of the persistent BOM tree.

**Returns:**

std::string Output string in which the persistent BOM tree is logged/dumped.

Definition at line 525 of file [STDAIR\\_Service.cpp](#).

Referenced by [csvDisplay\(\)](#).

**32.154.3.19 std::string stdair::STDAIR\_Service::csvDisplay (const BomRoot & iBomRoot) const**

Recursively display (dump in the returned string) the objects of the BOM tree.

**Parameters:**

*const* [BomRoot](#)& Reference on the [BomRoot](#) to display.

**Returns:**

std::string Output string in which the BOM tree is logged/dumped.

Definition at line 541 of file [STDAIR\\_Service.cpp](#).

References [csvDisplay\(\)](#).

**32.154.3.20 std::string stdair::STDAIR\_Service::csvDisplay (const AirlineCode\_T & iAirlineCode, const FlightNumber\_T & iFlightNumber, const Date\_T & iDepartureDate) const**

Recursively display (dump in the returned string) the flight-date corresponding to the parameters given as input.

**Parameters:**

*const* AirlineCode\_T& Airline code of the flight to display.  
*const* FlightNumber\_T& Flight number of the flight to display.  
*const* Date\_T& Departure date of the flight to display.

**Returns:**

std::string Output string in which the BOM tree is logged/dumped.

Definition at line 555 of file [STDAIR\\_Service.cpp](#).

References [csvDisplay\(\)](#), and [stdair::BomRetriever::retrieveFlightDateFromKeySet\(\)](#).

### 32.154.3.21 std::string stdair::STDAIR\_Service::csvDisplay (const TravelSolutionList\_T & iTravelSolutionList) const

Display (dump in the returned string) the full list of travel solution structures.

**Returns:**

std::string Output string in which the list of travel solutions is logged/dumped.

Definition at line 587 of file [STDAIR\\_Service.cpp](#).

References [csvDisplay\(\)](#).

### 32.154.3.22 std::string stdair::STDAIR\_Service::csvDisplay (const AirportCode\_T & iOrigin, const AirportCode\_T & iDestination, const Date\_T & iDepartureDate) const

Recursively display (dump in the returned string) the fare-rules corresponding to the parameters given as input.

**Parameters:**

*const* AirportCode\_T& Origin airport of the fare-rules to display  
*const* AirportCode\_T& Destination airport of the fare-rules to display.  
*const* Date\_T& Departure date of the fare-rules to display.

**Returns:**

std::string Output string in which the BOM tree is logged/dumped.

Definition at line 598 of file [STDAIR\\_Service.cpp](#).

References [csvDisplay\(\)](#), and [stdair::BomRetriever::retrieveDatePeriodListFromKeySet\(\)](#).

### 32.154.3.23 BomRoot & stdair::STDAIR\_Service::getBomRoot () const

Get a reference on the [BomRoot](#) object. If the service context has not been initialised, that method throws an exception (failing assertion).

**Returns:**

[BomRoot](#)& Reference on the [BomRoot](#).

Definition at line 128 of file [STDAIR\\_Service.cpp](#).

**32.154.3.24 BomRoot & stdair::STDAIR\_Service::getPersistentBomRoot () const**

Get a reference on the [BomRoot](#) object. If the service context has not been initialised, that method throws an exception (failing assertion).

**Returns:**

[BomRoot](#)& Reference on the [BomRoot](#).

Definition at line 138 of file [STDAIR\\_Service.cpp](#).

**32.154.3.25 BasLogParams stdair::STDAIR\_Service::getLogParams () const**

Get the log parameters.

**Returns:**

[BasLogParams](#) Copy of the structure holding the log parameters.

Definition at line 148 of file [STDAIR\\_Service.cpp](#).

**32.154.3.26 const BasDBParams & stdair::STDAIR\_Service::getDBParams () const**

Get the database parameters.

**Returns:**

const [BasDBParams](#)& Reference on the structure holding the database parameters.

Definition at line 153 of file [STDAIR\\_Service.cpp](#).

**32.154.3.27 const ServiceInitialisationType & stdair::STDAIR\_Service::getServiceInitialisationType () const**

Get the type of initialisation (e.g., not yet, file parsing, sample BOM) which the component (owner of the current [STDAIR\\_Service](#) instance) has gone through.

**Returns:**

const [ServiceInitialisationType](#)& Reference on the type of initialisation (enumeration structure).

Definition at line 163 of file [STDAIR\\_Service.cpp](#).

### 32.154.3.28 void stdair::STDAIR\_Service::importINIFig (const ConfigINIFile & iConfigINIFile)

Import the configuration INI input file (format cfg).

#### Parameters:

**const** ConfigINIFile& INI input file.

Definition at line 375 of file [STDAIR\\_Service.cpp](#).

### 32.154.3.29 void stdair::STDAIR\_Service::importConfigValue (const std::string & iValue, const std::string & iPath)

Create the given specified path in the configuration tree and add the corresponding given value (or replace the value if the path already exists).

#### Parameters:

**const** std::string& Value to add in the configuration tree.

**const** std::string& Path to create (or to look for).

Definition at line 391 of file [STDAIR\\_Service.cpp](#).

References [stdair::ConfigHolderStruct::addValue\(\)](#).

### 32.154.3.30 template<typename ValueType > bool stdair::STDAIR\_Service::exportConfigValue (ValueType & ioValue, const std::string & iPath) [inline]

Look for the specified path in the configuration tree and, if existing, try to extract the corresponding value. The type of the value to extract is a template parameter.

#### Parameters:

**ValueType&** Value to add in the configuration tree.

**const** std::string& Path to look for.

Definition at line 552 of file [STDAIR\\_Service.hpp](#).

References [stdair::ConfigHolderStruct::exportValue\(\)](#).

### 32.154.3.31 void stdair::STDAIR\_Service::updateAirlineFeatures ()

Update the airline features objects thanks to the configuration holder.

Definition at line 408 of file [STDAIR\\_Service.cpp](#).

References [stdair::ConfigHolderStruct::updateAirlineFeatures\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/STDAIR\\_Service.hpp](#)
- [stdair/service/STDAIR\\_Service.cpp](#)

## 32.155 stdair::STDAIR\_ServiceContext Class Reference

Class holding the context of the Stdair services.

`#include <stdair/service/STDAIR_ServiceContext.hpp>` Inheritance diagram for stdair::STDAIR\_ServiceContext::

### Public Member Functions

- virtual void [toStream](#) (std::ostream &ioOut) const
- virtual void [fromStream](#) (std::istream &ioIn)

### Friends

- class [STDAIR\\_Service](#)
- class [FacSTDAIRServiceContext](#)

### 32.155.1 Detailed Description

Class holding the context of the Stdair services.

Definition at line 25 of file [STDAIR\\_ServiceContext.hpp](#).

### 32.155.2 Member Function Documentation

#### 32.155.2.1 virtual void stdair::ServiceAbstract::toStream (std::ostream & ioOut) const [inline, virtual, inherited]

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* the output stream.

Definition at line 28 of file [ServiceAbstract.hpp](#).

#### 32.155.2.2 virtual void stdair::ServiceAbstract::fromStream (std::istream & ioIn) [inline, virtual, inherited]

Read a Business Object from an input stream.

#### Parameters:

*istream&* the input stream.

Definition at line 35 of file [ServiceAbstract.hpp](#).

Referenced by [operator>>\(\)](#).

### 32.155.3 Friends And Related Function Documentation

#### 32.155.3.1 friend class STDAIR\_Service [friend]

The [STDAIR\\_Service](#) class should be the sole class to get access to ServiceContext content: general users do not want to bother with a context interface.

Definition at line 29 of file [STDAIR\\_ServiceContext.hpp](#).

#### 32.155.3.2 friend class FacSTDAIRServiceContext [friend]

Definition at line 30 of file [STDAIR\\_ServiceContext.hpp](#).

The documentation for this class was generated from the following file:

- [stdair/service/STDAIR\\_ServiceContext.hpp](#)

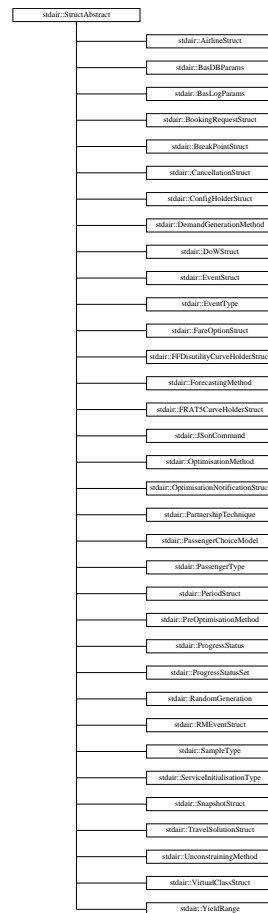

### 32.156 stdair::StructAbstract Struct Reference

Base class for the light structures.

```
#include <stdair/basic/StructAbstract.hpp>Inheritance
stdair::StructAbstract::
```

diagram

### 32.156.1 Detailed Description

Base class for the light structures.

Definition at line 16 of file [StructAbstract.hpp](#).

### 32.156.2 Constructor & Destructor Documentation

#### 32.156.2.1 virtual stdair::StructAbstract::~~StructAbstract () [inline, virtual]

Destructor.

Definition at line 22 of file [StructAbstract.hpp](#).

#### 32.156.2.2 stdair::StructAbstract::StructAbstract () [inline, protected]

Protected Default Constructor to ensure this class is abstract.

Definition at line 49 of file [StructAbstract.hpp](#).

### 32.156.3 Member Function Documentation

#### 32.156.3.1 void stdair::StructAbstract::toStream (std::ostream & ioOut) const [inline]

Dump a Business Object into an output stream.

##### Parameters:

*ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 29 of file [StructAbstract.hpp](#).

References [describe\(\)](#).

#### 32.156.3.2 virtual void stdair::StructAbstract::fromStream (std::istream & ioIn) [inline, virtual]

Read a Business Object from an input stream.

##### Parameters:

*istream&* the input stream.

Reimplemented in [stdair::ProgressStatusSet](#), [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::EventStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 38 of file [StructAbstract.hpp](#).

Referenced by [operator>>\(\)](#).

### 32.156.3.3 virtual const std::string stdair::StructAbstract::describe () const [pure virtual]

Display of the structure.

Implemented in [stdair::BasDBParams](#), [stdair::BasLogParams](#), [stdair::DemandGenerationMethod](#), [stdair::EventType](#), [stdair::ForecastingMethod](#), [stdair::JsonCommand](#), [stdair::OptimisationMethod](#), [stdair::PartnershipTechnique](#), [stdair::PassengerChoiceModel](#), [stdair::PassengerType](#), [stdair::PreOptimisationMethod](#), [stdair::ProgressStatus](#), [stdair::ProgressStatusSet](#), [stdair::RandomGeneration](#), [stdair::SampleType](#), [stdair::ServiceInitialisationType](#), [stdair::UnconstrainingMethod](#), [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::DoWStruct](#), [stdair::EventStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::PeriodStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

#### 32.157.1 Detailed Description

Class representing the actual attributes for a fare time-period.

Definition at line 18 of file [TimePeriod.hpp](#).

#### 32.157.2 Member Typedef Documentation

##### 32.157.2.1 typedef TimePeriodKey stdair::TimePeriod::Key\_T

Definition allowing to retrieve the associated BOM key type.

Definition at line 28 of file [TimePeriod.hpp](#).

#### 32.157.3 Constructor & Destructor Documentation

##### 32.157.3.1 stdair::TimePeriod::TimePeriod (const Key\_T & iKey) [protected]

Main constructor.

Definition at line 27 of file [TimePeriod.cpp](#).

##### 32.157.3.2 stdair::TimePeriod::~~TimePeriod () [protected, virtual]

Destructor.

Definition at line 32 of file [TimePeriod.cpp](#).

#### 32.157.4 Member Function Documentation

##### 32.157.4.1 void stdair::TimePeriod::toStream (std::ostream & ioOut) const [inline, virtual]

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Implements [stdair::BomAbstract](#).

Definition at line 38 of file [TimePeriod.hpp](#).

References [toString\(\)](#).

**32.157.4.2 void stdair::TimePeriod::fromStream (std::istream & ioIn) [inline, virtual]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Implements [stdair::BomAbstract](#).

Definition at line 47 of file [TimePeriod.hpp](#).

**32.157.4.3 std::string stdair::TimePeriod::toString () const [virtual]**

Get the serialised version of the Business Object.

Implements [stdair::BomAbstract](#).

Definition at line 36 of file [TimePeriod.cpp](#).

References [describeKey\(\)](#).

Referenced by [toStream\(\)](#).

**32.157.4.4 const std::string stdair::TimePeriod::describeKey () const [inline]**

Get a string describing the key.

Definition at line 58 of file [TimePeriod.hpp](#).

References [\\_key](#), and [stdair::TimePeriodKey::toString\(\)](#).

Referenced by [toString\(\)](#).

**32.157.4.5 const Key\_T& stdair::TimePeriod::getKey () const [inline]**

Get the primary key (time range start, time range end).

Definition at line 67 of file [TimePeriod.hpp](#).

References [\\_key](#).

**32.157.4.6 BomAbstract\* const stdair::TimePeriod::getParent () const [inline]**

Get a reference on the parent object instance.

Definition at line 74 of file [TimePeriod.hpp](#).

References [\\_parent](#).

**32.157.4.7 const HolderMap\_T& stdair::TimePeriod::getHolderMap () const [inline]**

Get a reference on the children holder.

Definition at line 81 of file [TimePeriod.hpp](#).

References [\\_holderMap](#).

**32.157.4.8 const Time\_T& stdair::TimePeriod::getTimeRangeStart () const [inline]**

Get the time range start.

Definition at line 88 of file [TimePeriod.hpp](#).

References [\\_key](#), and [stdair::TimePeriodKey::getTimeRangeStart\(\)](#).

Referenced by [isDepartureTimeValid\(\)](#).

**32.157.4.9 const Time\_T& stdair::TimePeriod::getTimeRangeEnd () const [inline]**

Get the time range end

Definition at line 95 of file [TimePeriod.hpp](#).

References [\\_key](#), and [stdair::TimePeriodKey::getTimeRangeEnd\(\)](#).

Referenced by [isDepartureTimeValid\(\)](#).

**32.157.4.10 bool stdair::TimePeriod::isDepartureTimeValid (const Time\_T & iFlightTime) const**

Check if the given departure time is included in the departure period of the segment path.

Definition at line 44 of file [TimePeriod.cpp](#).

References [getTimeRangeEnd\(\)](#), [getTimeRangeStart\(\)](#), and [STDAIR\\_LOG\\_DEBUG](#).

**32.157.5 Friends And Related Function Documentation****32.157.5.1 friend class FacBom [friend]**

Definition at line 19 of file [TimePeriod.hpp](#).

**32.157.5.2 friend class FacCloneBom [friend]**

Definition at line 20 of file [TimePeriod.hpp](#).

**32.157.5.3 friend class FacBomManager [friend]**

Definition at line 21 of file [TimePeriod.hpp](#).

### 32.157.6 Member Data Documentation

#### 32.157.6.1 Key\_T stdair::TimePeriod::\_key [protected]

Primary key (flight number and departure date).

Definition at line 133 of file [TimePeriod.hpp](#).

Referenced by [describeKey\(\)](#), [getKey\(\)](#), [getTimeRangeEnd\(\)](#), and [getTimeRangeStart\(\)](#).

#### 32.157.6.2 BomAbstract\* stdair::TimePeriod::\_parent [protected]

Pointer on the parent class ([Inventory](#)).

Definition at line 138 of file [TimePeriod.hpp](#).

Referenced by [getParent\(\)](#).

#### 32.157.6.3 HolderMap\_T stdair::TimePeriod::\_holderMap [protected]

Map holding the children.

Definition at line 143 of file [TimePeriod.hpp](#).

Referenced by [getHolderMap\(\)](#).

The documentation for this class was generated from the following files:

- [stdair/bom/TimePeriod.hpp](#)
- [stdair/bom/TimePeriod.cpp](#)

## 32.158 stdair::TimePeriodKey Struct Reference

Key of time-period.

### 32.158.1 Detailed Description

Key of time-period.

Definition at line 15 of file [TimePeriodKey.hpp](#).

### 32.158.2 Constructor & Destructor Documentation

#### 32.158.2.1 stdair::TimePeriodKey::TimePeriodKey (const Time\_T & iTimeRangeStart, const Time\_T & iTimeRangeEnd)

Main constructor.

Definition at line 21 of file [TimePeriodKey.cpp](#).

#### 32.158.2.2 stdair::TimePeriodKey::TimePeriodKey (const TimePeriodKey & iKey)

Copy constructor.

Definition at line 28 of file [TimePeriodKey.cpp](#).

#### 32.158.2.3 stdair::TimePeriodKey::~TimePeriodKey ()

Destructor.

Definition at line 34 of file [TimePeriodKey.cpp](#).

### 32.158.3 Member Function Documentation

#### 32.158.3.1 const Time\_T& stdair::TimePeriodKey::getTimeRangeStart () const [inline]

Get the time period start.

Definition at line 35 of file [TimePeriodKey.hpp](#).

Referenced by [stdair::TimePeriod::getTimeRangeStart\(\)](#).

#### 32.158.3.2 const Time\_T& stdair::TimePeriodKey::getTimeRangeEnd () const [inline]

Get the time period end.

Definition at line 42 of file [TimePeriodKey.hpp](#).

Referenced by [stdair::TimePeriod::getTimeRangeEnd\(\)](#).

#### 32.158.3.3 void stdair::TimePeriodKey::toStream (std::ostream & ioOut) const [virtual]

Dump a Business Object Key into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 38 of file [TimePeriodKey.cpp](#).

References [toString\(\)](#).

### 32.158.3.4 void stdair::TimePeriodKey::fromStream (std::istream & *ioIn*) [virtual]

Read a Business Object Key from an input stream.

#### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 43 of file [TimePeriodKey.cpp](#).

### 32.158.3.5 const std::string stdair::TimePeriodKey::toString () const [virtual]

Get the serialised version of the Business Object Key. That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 47 of file [TimePeriodKey.cpp](#).

Referenced by [stdair::TimePeriod::describeKey\(\)](#), and [toStream\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/TimePeriodKey.hpp](#)
- [stdair/bom/TimePeriodKey.cpp](#)

## 32.159 stdair::TravelSolutionStruct Struct Reference

Structure holding the elements of a travel solution.

`#include <stdair/bom/TravelSolutionStruct.hpp>`  
 stdair::TravelSolutionStruct::

### 32.159.1 Detailed Description

Structure holding the elements of a travel solution.

Definition at line 24 of file [TravelSolutionStruct.hpp](#).

### 32.159.2 Constructor & Destructor Documentation

#### 32.159.2.1 stdair::TravelSolutionStruct::TravelSolutionStruct ()

Default constructor.

Definition at line 15 of file [TravelSolutionStruct.cpp](#).

#### 32.159.2.2 stdair::TravelSolutionStruct::~~TravelSolutionStruct ()

Destructor.

Definition at line 19 of file [TravelSolutionStruct.cpp](#).

### 32.159.3 Member Function Documentation

#### 32.159.3.1 const SegmentPath\_T& stdair::TravelSolutionStruct::getSegmentPath () const [inline]

Get the segment path.

Definition at line 28 of file [TravelSolutionStruct.hpp](#).

**32.159.3.2** `const ClassAvailabilityMapHolder_T&  
stdair::TravelSolutionStruct::getClassAvailabilityMapHolder () const  
[inline]`

Get the holder of availabilities.

Definition at line 33 of file [TravelSolutionStruct.hpp](#).

**32.159.3.3** `const ClassObjectIDMapHolder_T&  
stdair::TravelSolutionStruct::getClassObjectIDMapHolder () const  
[inline]`

Get the holder of object ID's.

Definition at line 38 of file [TravelSolutionStruct.hpp](#).

**32.159.3.4** `const ClassYieldMapHolder_T&  
stdair::TravelSolutionStruct::getClassYieldMapHolder () const  
[inline]`

Get the holder of yields.

Definition at line 43 of file [TravelSolutionStruct.hpp](#).

**32.159.3.5** `const BidPriceVectorHolder_T&  
stdair::TravelSolutionStruct::getBidPriceVectorHolder () const  
[inline]`

Get the holder of bid price vectors.

Definition at line 48 of file [TravelSolutionStruct.hpp](#).

**32.159.3.6** `const ClassBpvMapHolder_T& stdair::TravelSolutionStruct::getClassBpvMapHolder  
() const [inline]`

Get the holder of class - bid price reference.

Definition at line 53 of file [TravelSolutionStruct.hpp](#).

**32.159.3.7** `const FareOptionList_T& stdair::TravelSolutionStruct::getFareOptionList () const  
[inline]`

Get the list of fare options.

Definition at line 58 of file [TravelSolutionStruct.hpp](#).

**32.159.3.8** `FareOptionList_T& stdair::TravelSolutionStruct::getFareOptionListRef ()  
[inline]`

Get the non-const list of fare options.

Definition at line 63 of file [TravelSolutionStruct.hpp](#).

**32.159.3.9** `const FareOptionStruct& stdair::TravelSolutionStruct::getChosenFareOption () const [inline]`

Get the chosen fare option.

Definition at line 68 of file [TravelSolutionStruct.hpp](#).

**32.159.3.10** `void stdair::TravelSolutionStruct::addSegment (const std::string & iKey)`

Add a segment key to the segment path.

Definition at line 154 of file [TravelSolutionStruct.cpp](#).

**32.159.3.11** `void stdair::TravelSolutionStruct::addClassAvailabilityMap (const ClassAvailabilityMap_T & iMap)`

Add a class availability map.

Definition at line 160 of file [TravelSolutionStruct.cpp](#).

**32.159.3.12** `void stdair::TravelSolutionStruct::addClassObjectIDMap (const ClassObjectIDMap_T & iMap)`

Add a class object ID map.

Definition at line 166 of file [TravelSolutionStruct.cpp](#).

**32.159.3.13** `void stdair::TravelSolutionStruct::addClassYieldMap (const ClassYieldMap_T & iMap)`

Add a class yield map.

Definition at line 172 of file [TravelSolutionStruct.cpp](#).

**32.159.3.14** `void stdair::TravelSolutionStruct::addBidPriceVector (const BidPriceVector_T & iBpv)`

Add a bid price vector.

Definition at line 178 of file [TravelSolutionStruct.cpp](#).

**32.159.3.15** `void stdair::TravelSolutionStruct::addClassBpvMap (const ClassBpvMap_T & iMap)`

Add a class bpv reference map.

Definition at line 184 of file [TravelSolutionStruct.cpp](#).

**32.159.3.16** `void stdair::TravelSolutionStruct::addFareOption (const FareOptionStruct & iFareOption)`

Add a fare option.

Definition at line 190 of file [TravelSolutionStruct.cpp](#).

**32.159.3.17** void stdair::TravelSolutionStruct::setChosenFareOption (const FareOptionStruct & iChosenFO) [inline]

Set the chosen fare option.

Definition at line 97 of file [TravelSolutionStruct.hpp](#).

**32.159.3.18** void stdair::TravelSolutionStruct::toStream (std::ostream & ioOut) const

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 23 of file [TravelSolutionStruct.cpp](#).

References [describe\(\)](#).

**32.159.3.19** void stdair::TravelSolutionStruct::fromStream (std::istream & ioIn) [virtual]

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 28 of file [TravelSolutionStruct.cpp](#).

**32.159.3.20** const std::string stdair::TravelSolutionStruct::describe () const [virtual]

Display of the structure.

Implements [stdair::StructAbstract](#).

Definition at line 53 of file [TravelSolutionStruct.cpp](#).

References [stdair::FareOptionStruct::describe\(\)](#), [stdair::BomKeyManager::extractKeys\(\)](#), and [stdair::ParsedKey::toString\(\)](#).

Referenced by [toStream\(\)](#).

**32.159.3.21** const std::string stdair::TravelSolutionStruct::display () const

Display of the structure.

Definition at line 95 of file [TravelSolutionStruct.cpp](#).

References [stdair::FareOptionStruct::display\(\)](#), [stdair::BomKeyManager::extractKeys\(\)](#), and [stdair::ParsedKey::toString\(\)](#).

**32.159.3.22** `const std::string stdair::TravelSolutionStruct::describeSegmentPath () const`

Display only the segment path.

Definition at line 32 of file [TravelSolutionStruct.cpp](#).

References [stdair::BomKeyManager::extractKeys\(\)](#), and [stdair::ParsedKey::toString\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/TravelSolutionStruct.hpp](#)
- [stdair/bom/TravelSolutionStruct.cpp](#)

**32.160** `soci::type_conversion< stdair::AirlineStruct >` Struct Template Reference

```
#include <stdair/dbadaptor/Dbairline.hpp>
```

**Public Types**

- typedef values [base\\_type](#)

**Static Public Member Functions**

- static void [from\\_base](#) (values const &iAirlineValues, indicator, [stdair::AirlineStruct](#) &ioAirline)
- static void [to\\_base](#) (const [stdair::AirlineStruct](#) &iAirline, values &ioAirlineValues, indicator &ioIndicator)

**32.160.1 Detailed Description**

```
template<> struct soci::type_conversion< stdair::AirlineStruct >
```

Specify how the AirlineStruct struct can be converted to (resp. from) values stored into (resp. retrieved from) database, using the SOCI framework.

Definition at line 25 of file [Dbairline.hpp](#).

**32.160.2 Member Typedef Documentation****32.160.2.1** typedef values `soci::type_conversion< stdair::AirlineStruct >::base_type`

Definition at line 27 of file [Dbairline.hpp](#).

**32.160.3 Member Function Documentation****32.160.3.1** `void soci::type_conversion< stdair::AirlineStruct >::from_base (values const &iAirlineValues, indicator, stdair::AirlineStruct &ioAirline) [static]`

Fill an Airline object from the database values.

Definition at line 17 of file [Dbairline.cpp](#).

References [stdair::AirlineStruct::setAirlineCode\(\)](#), and [stdair::AirlineStruct::setAirlineName\(\)](#).

**32.160.3.2** `void soci::type_conversion< stdair::AirlineStruct >::to_base (const stdair::AirlineStruct & iAirline, values & ioAirlineValues, indicator & ioIndicator) [static]`

Fill the database values from an Airline object.

Definition at line 30 of file [Dbairline.cpp](#).

References [stdair::AirlineStruct::getAirlineCode\(\)](#), and [stdair::AirlineStruct::getAirlineName\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/dbadaptor/Dbairline.hpp](#)
- [stdair/dbadaptor/Dbairline.cpp](#)

## 32.161 `TypeWithSize< size >` Class Template Reference

```
#include <stdair/basic/float_utils_google.hpp>
```

### Public Types

- typedef void [UInt](#)

### 32.161.1 Detailed Description

```
template<size_t size> class TypeWithSize< size >
```

Definition at line 54 of file [float\\_utils\\_google.hpp](#).

### 32.161.2 Member Typedef Documentation

**32.161.2.1** `template<size_t size> typedef void TypeWithSize< size >::UInt`

Definition at line 58 of file [float\\_utils\\_google.hpp](#).

The documentation for this class was generated from the following file:

- [stdair/basic/float\\_utils\\_google.hpp](#)

## 32.162 `TypeWithSize< 4 >` Class Template Reference

```
#include <stdair/basic/float_utils_google.hpp>
```

### Public Types

- typedef int [Int](#)
- typedef unsigned int [UInt](#)

### 32.162.1 Detailed Description

`template<> class TypeWithSize< 4 >`

Definition at line 63 of file [float\\_utils\\_google.hpp](#).

### 32.162.2 Member Typedef Documentation

#### 32.162.2.1 `typedef int TypeWithSize< 4 >::Int`

Definition at line 69 of file [float\\_utils\\_google.hpp](#).

#### 32.162.2.2 `typedef unsigned int TypeWithSize< 4 >::UInt`

Definition at line 70 of file [float\\_utils\\_google.hpp](#).

The documentation for this class was generated from the following file:

- [stdair/basic/float\\_utils\\_google.hpp](#)

## 32.163 `TypeWithSize< 8 >` Class Template Reference

```
#include <stdair/basic/float_utils_google.hpp>
```

### Public Types

- `typedef long long` [Int](#)
- `typedef unsigned long long` [UInt](#)

### 32.163.1 Detailed Description

`template<> class TypeWithSize< 8 >`

Definition at line 75 of file [float\\_utils\\_google.hpp](#).

### 32.163.2 Member Typedef Documentation

#### 32.163.2.1 `typedef long long TypeWithSize< 8 >::Int`

Definition at line 81 of file [float\\_utils\\_google.hpp](#).

#### 32.163.2.2 `typedef unsigned long long TypeWithSize< 8 >::UInt`

Definition at line 82 of file [float\\_utils\\_google.hpp](#).

The documentation for this class was generated from the following file:

- [stdair/basic/float\\_utils\\_google.hpp](#)

## 32.164 stdair::UnconstrainingMethod Struct Reference

`#include <stdair/basic/UnconstrainingMethod.hpp>`  
 stdair::UnconstrainingMethod::

### Public Types

- enum [EN\\_UnconstrainingMethod](#) { [EM](#) = 0, [LAST\\_VALUE](#) }

### Public Member Functions

- [EN\\_UnconstrainingMethod](#) [getMethod](#) () const
- std::string [getMethodAsString](#) () const
- const std::string [describe](#) () const
- bool [operator==](#) (const [EN\\_UnconstrainingMethod](#) &) const
- [UnconstrainingMethod](#) (const [EN\\_UnconstrainingMethod](#) &)
- [UnconstrainingMethod](#) (const char iMethod)
- [UnconstrainingMethod](#) (const [UnconstrainingMethod](#) &)
- void [toStream](#) (std::ostream &ioOut) const
- virtual void [fromStream](#) (std::istream &ioIn)

### Static Public Member Functions

- static const std::string & [getLabel](#) (const [EN\\_UnconstrainingMethod](#) &)
- static char [getMethodLabel](#) (const [EN\\_UnconstrainingMethod](#) &)
- static std::string [getMethodLabelAsString](#) (const [EN\\_UnconstrainingMethod](#) &)
- static std::string [describeLabels](#) ()

#### 32.164.1 Detailed Description

Enumeration of unconstraining methods.

Definition at line 15 of file [UnconstrainingMethod.hpp](#).

### 32.164.2 Member Enumeration Documentation

#### 32.164.2.1 enum stdair::UnconstrainingMethod::EN\_UnconstrainingMethod

Enumerator:

*EM*

*LAST\_VALUE*

Definition at line 17 of file [UnconstrainingMethod.hpp](#).

### 32.164.3 Constructor & Destructor Documentation

#### 32.164.3.1 stdair::UnconstrainingMethod::UnconstrainingMethod (const EN\_UnconstrainingMethod & *iUnconstrainingMethod*)

Constructor.

Definition at line 36 of file [UnconstrainingMethod.cpp](#).

#### 32.164.3.2 stdair::UnconstrainingMethod::UnconstrainingMethod (const char *iMethod*)

Constructor.

Definition at line 41 of file [UnconstrainingMethod.cpp](#).

References [describeLabels\(\)](#), [EM](#), and [LAST\\_VALUE](#).

#### 32.164.3.3 stdair::UnconstrainingMethod::UnconstrainingMethod (const UnconstrainingMethod & *iUnconstrainingMethod*)

Default copy constructor.

Definition at line 30 of file [UnconstrainingMethod.cpp](#).

### 32.164.4 Member Function Documentation

#### 32.164.4.1 const std::string & stdair::UnconstrainingMethod::getLabel (const EN\_UnconstrainingMethod & *iMethod*) [static]

Get the label as a string (e.g., "Expectation-Maximisation")

Definition at line 58 of file [UnconstrainingMethod.cpp](#).

#### 32.164.4.2 char stdair::UnconstrainingMethod::getMethodLabel (const EN\_UnconstrainingMethod & *iMethod*) [static]

Get the label as a single char (e.g., 'T' or 'B').

Definition at line 63 of file [UnconstrainingMethod.cpp](#).

#### 32.164.4.3 std::string stdair::UnconstrainingMethod::getMethodLabelAsString (const EN\_UnconstrainingMethod & *iMethod*) [static]

Get the label as a string of a single char (e.g., "T" or "B").

Definition at line 69 of file [UnconstrainingMethod.cpp](#).

#### 32.164.4.4 std::string stdair::UnconstrainingMethod::describeLabels () [static]

List the labels.

Definition at line 76 of file [UnconstrainingMethod.cpp](#).

References [LAST\\_VALUE](#).

Referenced by [UnconstrainingMethod\(\)](#).

#### 32.164.4.5 UnconstrainingMethod::EN\_UnconstrainingMethod stdair::UnconstrainingMethod::getMethod () const

Get the enumerated value.

Definition at line 88 of file [UnconstrainingMethod.cpp](#).

Referenced by [stdair::AirlineFeature::getUnconstrainingMethod\(\)](#).

#### 32.164.4.6 std::string stdair::UnconstrainingMethod::getMethodAsString () const

Get the enumerated value as a short string (e.g., "T" or "B").

Definition at line 93 of file [UnconstrainingMethod.cpp](#).

#### 32.164.4.7 const std::string stdair::UnconstrainingMethod::describe () const [virtual]

Give a description of the structure (e.g., "Expectation-Maximisation").

Implements [stdair::StructAbstract](#).

Definition at line 100 of file [UnconstrainingMethod.cpp](#).

#### 32.164.4.8 bool stdair::UnconstrainingMethod::operator== (const EN\_UnconstrainingMethod & *iMethod*) const

Comparison operator.

Definition at line 108 of file [UnconstrainingMethod.cpp](#).

#### 32.164.4.9 void stdair::StructAbstract::toStream (std::ostream & *ioOut*) const [inline, inherited]

Dump a Business Object into an output stream.

#### Parameters:

*ostream&* the output stream.

Reimplemented in [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 29 of file [StructAbstract.hpp](#).

References [stdair::StructAbstract::describe\(\)](#).

#### 32.164.4.10 virtual void stdair::StructAbstract::fromStream (std::istream & ioIn) [inline, virtual, inherited]

Read a Business Object from an input stream.

##### Parameters:

*istream&* the input stream.

Reimplemented in [stdair::ProgressStatusSet](#), [stdair::YieldRange](#), [stdair::AirlineStruct](#), [stdair::BookingRequestStruct](#), [stdair::BreakPointStruct](#), [stdair::CancellationStruct](#), [stdair::ConfigHolderStruct](#), [stdair::EventStruct](#), [stdair::FareOptionStruct](#), [stdair::FFDisutilityCurveHolderStruct](#), [stdair::FRAT5CurveHolderStruct](#), [stdair::OptimisationNotificationStruct](#), [stdair::RMEventStruct](#), [stdair::SnapshotStruct](#), [stdair::TravelSolutionStruct](#), and [stdair::VirtualClassStruct](#).

Definition at line 38 of file [StructAbstract.hpp](#).

Referenced by [operator>>\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/basic/UnconstrainingMethod.hpp](#)
- [stdair/basic/UnconstrainingMethod.cpp](#)

## 32.165 stdair::VirtualClassStruct Struct Reference

`#include <stdair/bom/VirtualClassStruct.hpp>` Inheritance diagram for `stdair::VirtualClassStruct`:

### Public Member Functions

- [VirtualClassStruct](#) (const [BookingClassList\\_T](#) &)
- [~VirtualClassStruct](#) ()

### 32.165.1 Detailed Description

Structure holding the elements of a virtual class.

Definition at line 24 of file [VirtualClassStruct.hpp](#).

### 32.165.2 Constructor & Destructor Documentation

#### 32.165.2.1 stdair::VirtualClassStruct::VirtualClassStruct (const VirtualClassStruct & iVC)

Default copy constructor.

Definition at line 19 of file [VirtualClassStruct.cpp](#).

#### 32.165.2.2 stdair::VirtualClassStruct::VirtualClassStruct (const BookingClassList\_T & ioBookingClassList)

Constructor.

Definition at line 26 of file [VirtualClassStruct.cpp](#).

#### 32.165.2.3 stdair::VirtualClassStruct::~~VirtualClassStruct ()

Destructor.

Definition at line 31 of file [VirtualClassStruct.cpp](#).

### 32.165.3 Member Function Documentation

#### 32.165.3.1 const BookingClassList\_T& stdair::VirtualClassStruct::getBookingClassList () const [inline]

Get the list of booking class.

Definition at line 28 of file [VirtualClassStruct.hpp](#).

**32.165.3.2 const Yield\_T& stdair::VirtualClassStruct::getYield () const [inline]**

Get the yield (average price paid for that virtual class).

Definition at line 33 of file [VirtualClassStruct.hpp](#).

Referenced by [stdair::LegCabin::displayVirtualClassList\(\)](#).

**32.165.3.3 const MeanValue\_T& stdair::VirtualClassStruct::getMean () const [inline]**

Get the mean value of the demand distribution.

Definition at line 38 of file [VirtualClassStruct.hpp](#).

**32.165.3.4 const StdDevValue\_T& stdair::VirtualClassStruct::getStdDev () const [inline]**

Get the standard deviation of the demand distribution.

Definition at line 43 of file [VirtualClassStruct.hpp](#).

**32.165.3.5 const BookingLimit\_T& stdair::VirtualClassStruct::getCumulatedBookingLimit () const [inline]**

Get the booking limit of the class.

Definition at line 48 of file [VirtualClassStruct.hpp](#).

Referenced by [stdair::LegCabin::displayVirtualClassList\(\)](#).

**32.165.3.6 const ProtectionLevel\_T& stdair::VirtualClassStruct::getCumulatedProtection () const [inline]**

Get the protection level of the class.

Definition at line 53 of file [VirtualClassStruct.hpp](#).

Referenced by [stdair::LegCabin::displayVirtualClassList\(\)](#).

**32.165.3.7 const GeneratedDemandVector\_T  
stdair::VirtualClassStruct::getGeneratedDemandVector ()  
const**

Get the generated demand sample vector for Monte-Carlo method.

Definition at line 54 of file [VirtualClassStruct.cpp](#).

References [stdair::BookingClass::getGeneratedDemandVector\(\)](#).

**32.165.3.8 void stdair::VirtualClassStruct::setYield (const Yield\_T & iYield) [inline]**

Set the yield (average price paid for that virtual class).

Definition at line 63 of file [VirtualClassStruct.hpp](#).

**32.165.3.9 void stdair::VirtualClassStruct::setMean (const MeanValue\_T & iMean) [inline]**

Set the mean value of the demand distribution.

Definition at line 68 of file [VirtualClassStruct.hpp](#).

**32.165.3.10 void stdair::VirtualClassStruct::setStdDev (const StdDevValue\_T & iStdDev) [inline]**

Set the standard deviation of the demand distribution.

Definition at line 73 of file [VirtualClassStruct.hpp](#).

**32.165.3.11 void stdair::VirtualClassStruct::setCumulatedBookingLimit (const BookingLimit\_T & iBL) [inline]**

Set the booking limit of the class.

Definition at line 78 of file [VirtualClassStruct.hpp](#).

**32.165.3.12 void stdair::VirtualClassStruct::setCumulatedProtection (const ProtectionLevel\_T & iP) [inline]**

Set the protection level of the class.

Definition at line 83 of file [VirtualClassStruct.hpp](#).

**32.165.3.13 void stdair::VirtualClassStruct::addBookingClass (BookingClass & iBookingClass) [inline]**

Add a booking class to the list of booking classes. Note: it is not a link Parent/Child so we don't use the [FacBom](#). The Virtual Classes are not bom objects because the optimiser needs to build them before each optimisation.

Definition at line 92 of file [VirtualClassStruct.hpp](#).

**32.165.3.14 void stdair::VirtualClassStruct::toStream (std::ostream & ioOut) const**

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 36 of file [VirtualClassStruct.cpp](#).

References [describe\(\)](#).

**32.165.3.15 void stdair::VirtualClassStruct::fromStream (std::istream & ioIn) [virtual]**

Read a Business Object from an input stream.

**Parameters:**

*istream*& the input stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 41 of file [VirtualClassStruct.cpp](#).

**32.165.3.16 const std::string stdair::VirtualClassStruct::describe () const [virtual]**

Display of the structure.

Implements [stdair::StructAbstract](#).

Definition at line 45 of file [VirtualClassStruct.cpp](#).

Referenced by [toStream\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/VirtualClassStruct.hpp](#)
- [stdair/bom/VirtualClassStruct.cpp](#)

**32.166 stdair::YieldFeatures Class Reference**

Class representing the actual attributes for a yield date-period.

`#include <stdair/bom/YieldFeatures.hpp>`Inheritance diagram for `stdair::YieldFeatures`:

**Public Types**

- typedef [YieldFeaturesKey](#) [Key\\_T](#)

**Public Member Functions**

- const std::string [describe](#) () const

### 32.168.1 Detailed Description

Class representing a range of yields.

Typically, bookings are priced according to rules (e.g., fare rules), leading to slight variations of revenues for a given product. The "yield range" captures the extent of revenues earned for a given product.

When no average and lower yields are defined, they are assumed to be equal to the upper yield.

Note that the lower yield is generally not defined, as it corresponds to the upper yield of the lower yield range.

Definition at line 23 of file [YieldRange.hpp](#).

### 32.168.2 Constructor & Destructor Documentation

#### 32.168.2.1 stdair::YieldRange::YieldRange ()

Constructors.

Definition at line 13 of file [YieldRange.cpp](#).

Definition at line 33 of file [YieldRange.cpp](#).

### 32.168.2.5 stdair::YieldRange::YieldRange (const Yield\_T *iUpperYield*, const Yield\_T *iAverageYield*, const Yield\_T *iLowerYield*)

Definition at line 40 of file [YieldRange.cpp](#).

### 32.168.2.6 stdair::YieldRange::~~YieldRange () [virtual]

Constructors.

Definition at line 48 of file [YieldRange.cpp](#).

## 32.168.3 Member Function Documentation

### 32.168.3.1 Yield\_T stdair::YieldRange::getUpperYield () const [inline]

Getter for the upper yield of the range.

Definition at line 39 of file [YieldRange.hpp](#).

### 32.168.3.2 Yield\_T stdair::YieldRange::getAverageYield () const [inline]

Getter for the average yield of the range.

Definition at line 43 of file [YieldRange.hpp](#).

### 32.168.3.3 Yield\_T stdair::YieldRange::getLowerYield () const [inline]

Getter for the lower yield of the range.

Definition at line 47 of file [YieldRange.hpp](#).

### 32.168.3.4 void stdair::YieldRange::setUpperYield (const Yield\_T *iUpperYield*) [inline]

Setter for the upper yield of the range.

Definition at line 53 of file [YieldRange.hpp](#).

### 32.168.3.5 void stdair::YieldRange::setAverageYield (const Yield\_T *iAverageYield*) [inline]

Setter for the average yield of the range.

Definition at line 57 of file [YieldRange.hpp](#).

### 32.168.3.6 void stdair::YieldRange::setLowerYield (const Yield\_T *iLowerYield*) [inline]

Setter for the lower yield of the range.

Definition at line 61 of file [YieldRange.hpp](#).

**32.168.3.7 void stdair::YieldRange::toStream (std::ostream & *ioOut*) const**

Dump a Business Object into an output stream.

**Parameters:**

*ostream&* the output stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 52 of file [YieldRange.cpp](#).

**32.168.3.8 void stdair::YieldRange::fromStream (std::istream & *ioIn*) [virtual]**

Read a Business Object from an input stream.

**Parameters:**

*istream&* the input stream.

Reimplemented from [stdair::StructAbstract](#).

Definition at line 58 of file [YieldRange.cpp](#).

**32.168.3.9 const std::string stdair::YieldRange::describe () const [virtual]**

Display of the structure.

Implements [stdair::StructAbstract](#).

Definition at line 62 of file [YieldRange.cpp](#).

The documentation for this class was generated from the following files:

- [stdair/basic/YieldRange.hpp](#)
- [stdair/basic/YieldRange.cpp](#)

- void [toStream](#) (std::ostream &ioOut) const
- void [fromStream](#) (std::istream &ioIn)
- const std::string [toString](#) () const

### 32.170.1 Detailed Description

Key of [YieldStore](#).

Definition at line 14 of file [YieldStoreKey.hpp](#).

### 32.170.2 Constructor & Destructor Documentation

#### 32.170.2.1 stdair::YieldStoreKey::YieldStoreKey (const AirlineCode\_T & iAirlineCode)

Constructors.

Definition at line 10 of file [YieldStoreKey.cpp](#).

#### 32.170.2.2 stdair::YieldStoreKey::YieldStoreKey (const YieldStoreKey & iKey)

Definition at line 14 of file [YieldStoreKey.cpp](#).

#### 32.170.2.3 stdair::YieldStoreKey::~YieldStoreKey ()

Destructor.

Definition at line 19 of file [YieldStoreKey.cpp](#).

### 32.170.3 Member Function Documentation

#### 32.170.3.1 `const AirlineCode_T& stdair::YieldStoreKey::getAirlineCode () const` `[inline]`

Get the airline code.

Definition at line 30 of file [YieldStoreKey.hpp](#).

Referenced by [stdair::YieldStore::getAirlineCode\(\)](#).

#### 32.170.3.2 `void stdair::YieldStoreKey::toStream (std::ostream & ioOut) const` `[virtual]`

Dump a Business Object Key into an output stream.

##### Parameters:

*ostream&* the output stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 23 of file [YieldStoreKey.cpp](#).

References [toString\(\)](#).

#### 32.170.3.3 `void stdair::YieldStoreKey::fromStream (std::istream & ioIn)` `[virtual]`

Read a Business Object Key from an input stream.

##### Parameters:

*istream&* the input stream.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 28 of file [YieldStoreKey.cpp](#).

#### 32.170.3.4 `const std::string stdair::YieldStoreKey::toString () const` `[virtual]`

Get the serialised version of the Business Object Key.

That string is unique, at the level of a given Business Object, when among children of a given parent Business Object.

For instance, "H" and "K" allow to differentiate among two marketing classes for the same segment-date.

Reimplemented from [stdair::KeyAbstract](#).

Definition at line 32 of file [YieldStoreKey.cpp](#).

Referenced by [stdair::YieldStore::describeKey\(\)](#), [toStream\(\)](#), and [stdair::YieldStore::toString\(\)](#).

The documentation for this struct was generated from the following files:

- [stdair/bom/YieldStoreKey.hpp](#)
- [stdair/bom/YieldStoreKey.cpp](#)

00032 // The Google C++ Testing Framework (Google Test)
00033
00034
00035 // This template class serves as a compile-time function from size to
00036 // type. It maps a size in bytes to a primitive type with that
00037 // size. e.g.
00038 //
00039 //     TypeWithSize<4>::UInt
00040 //
00041 // is typedef-ed to be unsigned int (unsigned integer made up of 4
00042 // bytes).
00043 //
00044 // Such functionality should belong to STL, but I cannot find it
00045 // there.
00046 //
00047 // Google Test uses this class in the implementation of floating-point
00048 // comparison.
00049 //
00050 // For now it only handles UInt (unsigned int) as that's all Google Test
00051 // needs. Other types can be easily added in the future if need
00052 // arises.
00053 template <size_t size>
00054 class TypeWithSize {
00055 public:
00056     // This prevents the user from using TypeWithSize<N> with incorrect

00088 // (either single-precision or double-precision, depending on the
00089 // template parameters).
00090 //
00091 // The purpose of this class is to do more sophisticated number
00092 // comparison. (Due to round-off error, etc, it's very unlikely that
00093 // two floating-points will be equal exactly. Hence a naive
00094 // comparison by the == operation often doesn't work.)
00095 //
00096 // Format of IEEE floating-point:
00097 //
00098 //     The most-significant bit being the leftmost, an IEEE
00099 //     floating-point looks like
00100 //
00101 //         sign_bit exponent_bits fraction_bits
00102 //
00103 //     Here, sign_bit is a single bit that designates the sign of the
00104 //     number.
00105 //
00106 //     For float, there are 8 exponent bits and 23 fraction bits.
00107 //
00108 //     For double, there are 11 exponent bits and 52 fraction bits.
00109 //
00110 //     More details can be found at
00111 //     http://en.wikipedia.org/wiki/IEEE\_floating-point\_standard.
00112 //

### 33.635.1 Typedef Documentation

#### 33.635.1.1 typedef int(\* pt2Func)(char \*)

Definition at line 35 of file [readline\\_autocomp.hpp](#).

### 33.635.2 Function Documentation

#### 33.635.2.1 char\* getwd ()

[readline\\_autocomp.hpp](#) -- A tiny application which demonstrates how to use the GNU Readline library. This application interactively allows users to manipulate files and their modes.

Referenced by [com\\_pwd\(\)](#).

#### 33.635.2.2 char\* xmalloc (size\_t)

Referenced by [dupstr\(\)](#).

#### 33.635.2.3 void com\_list (char \* arg)

List the file(s) named in arg.

Definition at line 264 of file [readline\\_autocomp.hpp](#).

#### 33.635.2.4 int com\_view (char \* arg)

Definition at line 274 of file [readline\\_autocomp.hpp](#).

References [valid\\_argument\(\)](#).

#### 33.635.2.5 int com\_rename (char \* arg)

Definition at line 284 of file [readline\\_autocomp.hpp](#).

References [too\\_dangerous\(\)](#).

#### 33.635.2.6 int com\_stat (char \* arg)

Definition at line 289 of file [readline\\_autocomp.hpp](#).

References [valid\\_argument\(\)](#).

**33.635.2.7 int com\_pwd (char \* *ignore*)**

Definition at line 367 of file [readline\\_autocomp.hpp](#).

References [getwd\(\)](#).

Referenced by [com\\_cd\(\)](#).

**33.635.2.8 int com\_delete (char \* *arg*)**

Definition at line 315 of file [readline\\_autocomp.hpp](#).

References [too\\_dangerous\(\)](#).

**33.635.2.9 int com\_help (char \* *arg*)**

Print out help for ARG, or for all of the commands if ARG is not present.

Definition at line 324 of file [readline\\_autocomp.hpp](#).

References [COMMAND::name](#).

**33.635.2.10 int com\_cd (char \* *arg*)**

Definition at line 356 of file [readline\\_autocomp.hpp](#).

References [com\\_pwd\(\)](#).

**33.635.2.11 int com\_quit (char \* *arg*)**

Definition at line 381 of file [readline\\_autocomp.hpp](#).

**33.635.2.12 char \* stripwhite (char \* *string*)**

Strip whitespace from the start and end of STRING. Return a pointer into STRING.

Definition at line 152 of file [readline\\_autocomp.hpp](#).

**33.635.2.13 COMMAND \* find\_command (char \* *name*)**

Look up NAME as the name of a command, and return a pointer to that command. Return a NULL pointer if NAME isn't a command name.

Definition at line 136 of file [readline\\_autocomp.hpp](#).

References [COMMAND::name](#).

Referenced by [execute\\_line\(\)](#).

**33.635.2.14 char\* dupstr (char \* *iString*)**

Duplicate a string

Definition at line 85 of file [readline\\_autocomp.hpp](#).References [xmalloc\(\)](#).Referenced by [command\\_generator\(\)](#).**33.635.2.15 int execute\_line (char \* *line*)**

Execute a command line.

Definition at line 94 of file [readline\\_autocomp.hpp](#).References [find\\_command\(\)](#), and [COMMAND::func](#).**33.635.2.16 char \* command\_generator (char \* *text*, int *state*)**

Generator function for command completion. STATE lets us know whether to start from scratch; without any state (i.e. STATE == 0), then we start at the top of the list.

Definition at line 222 of file [readline\\_autocomp.hpp](#).References [dupstr\(\)](#).Referenced by [fileman\\_completion\(\)](#).**33.635.2.17 char \*\* fileman\_completion (char \* *text*, int *start*, int *end*)**

Attempt to complete on the contents of TEXT. START and END bound the region of rl\_line\_buffer that contains the word to complete. TEXT is the word to complete. We can use the entire contents of rl\_line\_buffer in case we want to do some simple parsing. Return the array of matches, or NULL if there aren't any.

Definition at line 200 of file [readline\\_autocomp.hpp](#).References [command\\_generator\(\)](#).Referenced by [initialize\\_readline\(\)](#).**33.635.2.18 void initialize\_readline ()**

Tell the GNU Readline library how to complete. We want to try to complete on command names if this is the first word in the line, or on filenames if not.

Definition at line 185 of file [readline\\_autocomp.hpp](#).References [fileman\\_completion\(\)](#).**33.635.2.19 void too\_dangerous (char \* *caller*)**Definition at line 387 of file [readline\\_autocomp.hpp](#).Referenced by [com\\_delete\(\)](#), and [com\\_rename\(\)](#).

### 33.635.2.20 int valid\_argument (char \* *caller*, char \* *arg*)

Definition at line 395 of file [readline\\_autocomp.hpp](#).

Referenced by [com\\_stat\(\)](#), and [com\\_view\(\)](#).

## 33.635.3 Variable Documentation

### 33.635.3.1 COMMAND commands[ ]

**Initial value:**

```
{
{ "cd", (*com_cd)(), "Change to directory DIR" },
{ "delete", com_delete, "Delete FILE" },
{ "help", com_help, "Display this text" },
{ "?", com_help, "Synonym for 'help'" },
{ "list", com_list, "List files in DIR" },
{ "ls", com_list, "Synonym for 'list'" },
{ "pwd", com_pwd, "Print the current working directory" },
{ "quit", com_quit, "Quit using airinv" },
{ "rename", com_rename, "Rename FILE to NEWNAME" },
{ "stat", com_stat, "Print out statistics on FILE" },
{ "view", com_view, "View the contents of FILE" },
{ (char*) NULL, (pt2Func) NULL, (char*) NULL }
}
```

Definition at line 58 of file [readline\\_autocomp.hpp](#).

### 33.635.3.2 int done

When non-zero, this global means the user is done using this program.

Definition at line 80 of file [readline\\_autocomp.hpp](#).

### 33.635.3.3 char syscom[1024] [static]

String to pass to system(). This is for the LIST, VIEW and RENAME commands.

Definition at line 259 of file [readline\\_autocomp.hpp](#).

**33.636 stdair/ui/cmdline/readline\_autocomp.hpp**

#### 33.637.1 Detailed Description

C++ wrapper around libreadline. Supported: editing, history, custom completers, keymaps. Attention: implementation is not thread safe! It is mainly because the readline library provides pure C interface and has many calls for an "atomic" completion operation

Definition in file [SReadline.hpp](#).
