The **boxedminipage** package[*]

A package for producing framed minipages.

Mario Wolczko, `mario@acm.org`

21 May 1992

The boxedminipage package is a LaTeX package which defines the boxedminipage environment – like `minipage`, but with a frame around it. The thickness of the rules around the box is controlled by `\fboxrule`, and the distance between the rules and the edges of the inner box is governed by `\fboxsep`.

This code is based on Lamport's `minipage` code.

Changes:

Fixed, 7 Jun 89 by Jerry Leichter – Leave `\fboxsep` worth of separation at top and bottom, not just at the sides!
