1.6 About Airlnv

Airlnv is a C++ library of airline inventory management classes and functions, mainly targeting simulation purposes. [N](#)

Airlnv makes an extensive use of existing open-source libraries for increased functionality, speed and accuracy. In particular the [Boost](#) (*C++ Standard Extensions*) library is used.

The Airlnv library originates from the department of Operational Research and Innovation at [Amadeus](#), Sophia Antipolis, France. Airlnv is released under the terms of the [GNU Lesser General Public License](#) (LGPLv2.1) for you to enjoy.

Airlnv should work on [GNU/Linux](#), [Sun Solaris](#), Microsoft Windows (with [Cygwin](#), [MinGW/MSYS](#), or [Microsoft Visual C++ .NET](#)) and [Mac OS X](#) operating systems.

Note

(N) - The Airlnv library is **NOT** intended, in any way, to be used by airlines for production systems. If you want to report issue, bug or feature request, or if you just want to give feedback, have a look on the right-hand side of this page for the preferred reporting methods. In any case, please do not contact Amadeus directly for any matter related to Airlnv.

(N) - **Amadeus** employees.

3 Coding Rules

In the following sections we describe the naming conventions which are used for files, classes, structures, local variables, and global variables.

3.1 Default Naming Rules for Variables

Variables names follow Java naming conventions. Examples:

- `lNumberOfPassengers`
- `lSeatAvailability`

3.2 Default Naming Rules for Functions

Function names follow Java naming conventions. Example:

- `int myFunctionName (const int& a, int b)`

3.3 Default Naming Rules for Classes and Structures

Each new word in a class or structure name should always start with a capital letter and the words should be separated with an under-score. Abbreviations are written with capital letters. Examples:

- `MyClassName`
- `MyStructName`

3.4 Default Naming Rules for Files

Files are named after the C++ class names.

Source files are named using `.cpp` suffix, whereas header files end with `.hpp` extension. Examples:

- `FlightDate.hpp`
- `SegmentDate.cpp`

3.5 Default Functionality of Classes

All classes that are configured by input parameters should include:

- default empty constructor
- one or more additional constructor(s) that takes input parameters and initializes the class instance
- setup function, preferably named `'setup'` or `'set_parameters'`

Explicit destructor functions are not required, unless they are needed. It shall not be possible to use any of the other member functions unless the class has been properly initiated with the input parameters.

4 Copyright and License

4.1 GNU LESSER GENERAL PUBLIC LICENSE

4.1.1 Version 2.1, February 1999

Copyright (C) 1991, 1999 Free Software Foundation, Inc.
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

[This is the first released version of the Lesser GPL. It also counts as the successor of the GNU Library Public License, version 2, hence the version number 2.1.]

4.2 Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public Licenses are intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users.

This license, the Lesser General Public License, applies to some specially designated software packages--typically libraries--of the Free Software Foundation and other authors who decide to use it. You can use it too, but we suggest you first think carefully about whether this license or the ordinary General Public License is the better strategy to use in any particular case, based on the explanations below.

When we speak of free software, we are referring to freedom of use, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish); that you receive source code or can get it if you want it; that you can change the software and use pieces of it in new free programs; and that you are informed that you can do these things.

To protect your rights, we need to make restrictions that forbid distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal permission to copy, distribute and/or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.

Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to permit linking those libraries into non-free programs.

When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a combined work, a derivative of the original library. The ordinary General Public License therefore permits such linking only if the entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.

We call this license the "Lesser" General Public License because it does Less to protect the user's freedom than the ordinary General Public License. It also provides other free software developers Less of an advantage over competing non-free programs. These disadvantages are the reason we use the ordinary General Public License for many libraries. However, the Lesser license provides advantages in certain special circumstances.

For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de-facto standard. To achieve this, non-free programs must be allowed to use the library. A more frequent case is that a free library does the same job as widely used non-free libraries. In this case, there is little to gain by limiting the free library to free software only, so we use the Lesser General Public License.

In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of free software. For example, permission to use the GNU C Library in non-free programs enables many more people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.

Although the Lesser General Public License is Less protective of the users' freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The former contains code derived from the library, whereas the latter must be combined with the library in order to run.

4.3 TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called "this License"). Each licensee is addressed as "you".

A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The "Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term "modification".)

"Source code" for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library's complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of

any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

1. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) The modified work must itself be a software library.
- b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.
- c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.
- d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

1. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

1. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

1. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

1. As an exception to the Sections above, you may also combine or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)

b) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library already present on the user's computer system, rather than copying library functions into the executable, and (2) will operate properly with a modified version of the library, if the user installs one, as long as the modified version is interface-compatible with the version that the work was made with.

c) Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.

d) If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.

e) Verify that the user has already received a copy of these materials or that you have already sent this user a copy.

For an executable, the required form of the "work that uses the Library" must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the materials to be distributed need not include anything that is normally distributed (in either source or binary form) with the major components

(compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

1. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:

a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.

b) Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

- (a) You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

1. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

1. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.

1. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

1. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among

countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

1. The Free Software Foundation may publish revised and/or new versions of the Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

1. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

4.3.1 NO WARRANTY

1. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.
1. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

4.3.2 END OF TERMS AND CONDITIONS

4.4 How to Apply These Terms to Your New Programs

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

```
<one line to give the library's name and a brief idea of what it does.>
Copyright (C) <year> <name of author>
```

```
This library is free software; you can redistribute it and/or
modify it under the terms of the GNU Lesser General Public
License as published by the Free Software Foundation; either
version 2.1 of the License, or (at your option) any later version.
```

This library is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Lesser General Public License for more details.

You should have received a copy of the GNU Lesser General Public License along with this library; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the library, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the library 'Frob' (a library for tweaking knobs) written by James Random Hacker.

<signature of Ty Coon>, 1 April 1990
Ty Coon, President of Vice

That's all there is to it!

5 Documentation Rules

5.1 General Rules

All classes in Airlnv should be properly documented with Doxygen comments in include (.hpp) files. Source (.cpp) files should be documented according to a normal standard for well documented C++ code.

An example of how the interface of a class shall be documented in Airlnv is shown here:

```

/*!
 * \brief Brief description of MyClass here
 *
 * Detailed description of MyClass here. With example code if needed.
 */
class MyClass {
public:
    ///! Default constructor
    MyClass(void) { setup_done = false; }

    /*!
     * \brief Constructor that initializes the class with parameters
     *
     * Detailed description of the constructor here if needed
     *
     * \param[in] param1 Description of \a param1 here
     * \param[in] param2 Description of \a param2 here
     */
    MyClass(TYPE1 param1, TYPE2 param2) { setup(param1, param2); }

    /*!
     * \brief Setup function for MyClass
     *
     * Detailed description of the setup function here if needed
     *
     * \param[in] param1 Description of \a param1 here
     * \param[in] param2 Description of \a param2 here
     */
    void setup(TYPE1 param1, TYPE2 param2);

    /*!
     * \brief Brief description of memberFunction1
     *

```

```

    * Detailed description of memberFunction1 here if needed
    *
    * \param[in]    param1 Description of \a param1 here
    * \param[in]    param2 Description of \a param2 here
    * \param[in,out] param3 Description of \a param3 here
    * \return Description of the return value here
    */
    TYPE4 memberFunction1(TYPE1 param1, TYPE2 param2, TYPE3 &param3);

private:

    bool _setUpDone;          /*!< Variable that checks if the class is properly
                               initialized with parameters */
    TYPE1 _privateVariable1; /*!< Short description of _privateVariable1 here
    TYPE2 _privateVariable2; /*!< Short description of _privateVariable2 here
};

```

5.2 File Header

All files should start with the following header, which include Doxygen's `\file`, `\brief` and `\author` tags, `$Date$` and `$Revisions$` CVS tags, and a common copyright note:

```

/*!
 * \file
 * \brief Brief description of the file here
 * \author Names of the authors who contributed to this code
 * \date Date
 *
 * Detailed description of the file here if needed.
 *
 * -----
 *
 * AirInv - C++ Airline Inventory Management Library
 *
 * Copyright (C) 2009-2010 (\see authors file for a list of contributors)
 *
 * \see copyright file for license information
 *
 * -----
 */

```

5.3 Grouping Various Parts

All functions must be added to a Doxygen group in order to appear in the documentation. The following code example defines the group `'my_group'`:

```

/*!
 * \defgroup my_group Brief description of the group here
 *
 * Detailed description of the group here
 */

```

The following example shows how to document the function `myFunction` and how to add it to the group `my_group`:

```

/*!
 * \brief Brief description of myFunction here
 * \ingroup my_group
 *
 * Detailed description of myFunction here
 *
 * \param[in] param1 Description of \a param1 here
 * \param[in] param2 Description of \a param2 here
 * \return Description of the return value here
 */
TYPE3 myFunction(TYPE1 param1, TYPE2 &param2);

```

6 Main features

A short list of the main features of AirInv is given below sorted in different categories. Many more features and functions exist and for these we refer to the reference documentation.

6.1 Network generation

- Network/graph generation

6.2 Inventory generation

- Inventory generation

6.3 Finding travel solutions

- Matching of travel solutions with user requests

6.4 Distributed inventories

- Inventory independent partitions
- MPI-based distribution

6.5 Other features

- CSV input file parsing
- Memory handling

7 Make a Difference

Do not ask what AirSched can do for you. Ask what you can do for AirSched.

You can help us to develop the AirSched library. There are always a lot of things you can do:

- Start using AirSched
- Tell your friends about AirSched and help them to get started using it
- If you find a bug, report it to us. Without your help we can never hope to produce a bug free code.
- Help us to improve the documentation by providing information about documentation bugs
- Answer support requests in the AirSched discussion forums on SourceForge. If you know the answer to a question, help others to overcome their AirSched problems.
- Help us to improve our algorithms. If you know of a better way (e.g. that is faster or requires less memory) to implement some of our algorithms, then let us know.
- Help us to port AirSched to new platforms. If you manage to compile AirSched on a new platform, then tell us how you did it.
- Send us your code. If you have a good AirSched compatible code, which you can release under the LGPLv2.1, and you think it should be included in AirSched, then send it to us.
- Become an AirSched developer. Send us an e-mail and tell what you can do for AirSched.

8 Make a new release

8.1 Introduction

This document describes briefly the recommended procedure of releasing a new version of AirInv using a Linux development machine and the SourceForge project site.

The following steps are required to make a release of the distribution package.

8.2 Initialisation

Clone locally the full [Git project](#):

```
cd ~
mkdir -p dev/sim
cd ~/dev/sim
git clone git://airinv.git.sourceforge.net/gitroot/airinv/airinv airinvgit
cd airinvgit
git checkout trunk
```

8.3 Branch creation

Create the branch, on your local clone, corresponding to the new release (say, 0.5.0):

```
cd ~/dev/sim/airinvgit
git checkout trunk
git checkout -b 0.5.0
```

Update the version in the various build system files, replacing 99.99.99 by the correct version number:

```
vi CMakeLists.txt
vi autogen.sh
```

Update the version and add a change-log in the ChangeLog and in the RPM specification files:

```
vi ChangeLog
vi airinv.spec
```

8.4 Commit and publish the release branch

Commit the new release:

```
cd ~/dev/sim/airinvgit
git add -A
git commit -m "[Release 0.5.0] Release of version 0.5.0."
git push
```

8.5 Update the change-log in the trunk as well

Update the change-log in the ChangeLog and RPM specification files:

```
cd ~/dev/sim/airinvgit
git checkout trunk
vi ChangeLog
vi airinv.spec
```

Commit the change-logs and publish the trunk (main development branch):

```
git commit -m "[Doc] Integrated the change-log of the release 0.5.0."
git push
```

8.6 Create distribution packages

Create the distribution packages using the following command:

```
cd ~/dev/sim/airinvgit
git checkout 0.5.0
rm -rf build && mkdir -p build
cd build
cmake -DCMAKE_INSTALL_PREFIX=/home/user/dev/deliveries/airinv-0.5.0 \
  -DWITH_STDAIR_PREFIX=/home/user/dev/deliveries/stdair-stable \
  -DCMAKE_BUILD_TYPE:String=Debug -DINSTALL_DOC:BOOL=ON ..
make check && make dist
```

This will configure, compile and check the package. The output packages will be named, for instance, `airinv-0.5.0.tar.gz` and `airinv-0.5.0.tar.bz2`.

8.7 Generation the RPM packages

Optionally, generate the RPM package (for instance, for [Fedora/RedHat](#)):

```
cd ~/dev/sim/airinvgit
git checkout 0.5.0
rm -rf build && mkdir -p build
cd build
cmake -DCMAKE_INSTALL_PREFIX=/home/user/dev/deliveries/airinv-0.5.0 \
  -DWITH_STDAIR_PREFIX=/home/user/dev/deliveries/stdair-stable \
  -DCMAKE_BUILD_TYPE:String=Debug -DINSTALL_DOC:BOOL=ON ..
make dist
```

To perform this step, `rpm-build`, `rpmlint` and `rpmdevtools` have to be available on the system.

```
cp airinv.spec ~/dev/packages/SPECS \
  && cp airinv-0.5.0.tar.bz2 ~/dev/packages/SOURCES
cd ~/dev/packages/SPECS
rpmbuild -ba airinv.spec
rpmlint -i ../SPECS/airinv.spec ../SRPMS/airinv-0.5.0-1.fc15.src.rpm \
  ../RPMS/noarch/airinv-* ../RPMS/i686/airinv-*
```

8.8 Update distributed change log

Update the `NEWS` and `ChangeLog` files with appropriate information, including what has changed since the previous release. Then commit and push the changes into the [AirInv's Git repository](#).

8.9 Create the binary package, including the documentation

Create the binary package, which includes HTML and PDF documentation, using the following command:

```
make package
```

The output binary package will be named, for instance, `airinv-0.5.0-Linux.tar.bz2`. That package contains both the HTML and PDF documentation. The binary package contains also the executables and shared libraries, as well as C++ header files, but all of those do not interest us for now.

8.10 Upload the files to SourceForge

Upload the distribution and documentation packages to the SourceForge server. Check [SourceForge help page on uploading software](#).

8.11 Upload the documentation to SourceForge

In order to update the Web site files, either:

- synchronise them with rsync and SSH:

```
cd ~/dev/sim/airinvgit
git checkout 0.5.0
rsync -aiv doc/html/ doc/latex/refman.pdf joe,airinv@web.sourceforge.net:htdocs/
```

where `-aiv` options mean:

- `-a`: archive/mirror mode; equals `-rlptgoD` (no `-H`, `-A`, `-X`)
- `-v`: increase verbosity
- `-i`: output a change-summary for all updates
- Note the trailing slashes (/) at the end of both the source and target directories. It means that the content of the source directory (`doc/html`), rather than the directory itself, has to be copied into the content of the target directory.

- or use the [SourceForge Shell service](#).

8.12 Make a new post

- submit a new entry in the [SourceForge project-related news feed](#)
- make a new post on the [SourceForge hosted WordPress blog](#)
- and update, if necessary, [Trac tickets](#).

8.13 Send an email on the announcement mailing-list

Finally, you should send an announcement to airinv-announce@lists.sourceforge.net (see <https://lists.sourceforge.net/lists/listinfo/airinv-announce> for the archives)

9 Installation

9.1 Table of Contents

- [Fedora/RedHat Linux distributions](#)
- [Airinv Requirements](#)
- [Basic Installation](#)
- [Compilers and Options](#)
- [Compiling For Multiple Architectures](#)
- [Installation Names](#)
- [Optional Features](#)
- [Particular systems](#)
- [Specifying the System Type](#)
- [Sharing Defaults](#)
- [Defining Variables](#)
- [‘cmake’ Invocation](#)

9.2 Fedora/RedHat Linux distributions

Note that on [Fedora/RedHat](#) Linux distributions, RPM packages are available and can be installed with your usual package manager. For instance:

```
yum -y install airinv-devel airinv-doc
```

RPM packages can also be available on the [SourceForge download site](#).

9.3 Airinv Requirements

Airinv should compile without errors or warnings on most GNU/Linux systems, on UNIX systems like Solaris SunOS, and on POSIX based environments for Microsoft Windows like Cygwin or MinGW with MSYS. It can be also built on Microsoft Windows NT/2000/XP/Vista/7 using Microsoft's Visual C++ .NET, but our support for this compiler is limited. For GNU/Linux, SunOS, Cygwin and MinGW we assume that you have at least the following GNU software installed on your computer:

- GNU Autotools:
 - [autoconf](#),
 - [automake](#),
 - [libtool](#),
 - [make](#), version 3.72.1 or later (check version with ``make --version``)
- [GCC](#) - GNU C++ Compiler (g++), version 4.3.x or later (check version with ``gcc --version``)
- [Boost](#) - C++ STL extensions, version 1.35 or later (check version with ``grep "define BOOST_LIB_VERSION" /usr/include/boost/version.hpp``)
- [MySQL](#) - Database client libraries, version 5.0 or later (check version with ``mysql --version``)
- [SOXI](#) - C++ database client library wrapper, version 3.0.0 or later (check version with ``soci-config --version``)

Optionally, you might need a few additional programs: [Doxygen](#), [LaTeX](#), [Dvips](#) and [Ghostscript](#), to generate the HTML and PDF documentation.

We strongly recommend that you use recent stable releases of the GCC, if possible. We do not actively work on supporting older versions of the GCC, and they may therefore (without prior notice) become unsupported in future releases of Airinv.

9.4 Basic Installation

Briefly, the shell commands `./cmake .. && make install` should configure, build, and install this package. The following more-detailed instructions are generic; see the `'README'` file for instructions specific to this package. Some packages provide this `'INSTALL'` file but do not implement all of the features documented below. The lack of an optional feature in a given package is not necessarily a bug. More recommendations for GNU packages can be found in the info page corresponding to "Makefile Conventions: (standards)Makefile Conventions".

The `'cmake'` shell script attempts to guess correct values for various system-dependent variables used during compilation. It uses those values to create a `'Makefile'` in each directory of the package. It may also create one or more `'.h'` files containing system-dependent definitions. Finally, it creates a `'CMakeCache.txt'` cache file that you can refer to in the future to recreate the current configuration, and a file `'CMakeFiles'` containing compiler output (useful mainly for debugging `'cmake'`).

It can also use an optional file (typically called `'config.cache'` and enabled with `'--cache-file=config.cache'` or simply `'-C'`) that saves the results of its tests to speed up reconfiguring. Caching is disabled by default to prevent problems with accidental use of stale cache files.

If you need to do unusual things to compile the package, please try to figure out how `'configure'` could check whether to do them, and mail diffs or instructions to the address given in the `'README'` so they can be considered for the

next release. If you are using the cache, and at some point `'config.cache'` contains results you don't want to keep, you may remove or edit it.

The file `<tt>'CMakeLists.txt'</tt>` is used to create the `\c 'Makefile'`

files.

The simplest way to compile this package is:

1. `'cd'` to the directory containing the package's source code and type `'./cmake .'` to configure the package for your system. Running `'cmake'` is generally fast. While running, it prints some messages telling which features it is checking for.
2. Type `'make'` to compile the package.
3. Optionally, type `'make check'` to run any self-tests that come with the package, generally using the just-built uninstalled binaries.
4. Type `'make install'` to install the programs and any data files and documentation. When installing into a prefix owned by root, it is recommended that the package be configured and built as a regular user, and only the `'make install'` phase executed with root privileges.
5. You can remove the program binaries and object files from the source code directory by typing `'make clean'`. To also remove the files that `'configure'` created (so you can compile the package for a different kind of computer), type `'make distclean'`. There is also a `'make maintainer-clean'` target, but that is intended mainly for the package's developers. If you use it, you may have to get all sorts of other programs in order to regenerate files that came with the distribution.
6. Often, you can also type `'make uninstall'` to remove the installed files again. In practice, not all packages have tested that uninstallation works correctly, even though it is required by the GNU Coding Standards.

9.5 Compilers and Options

Some systems require unusual options for compilation or linking that the `'cmake'` script does not know about. Run `'./cmake --help'` for details on some of the pertinent environment variables.

You can give `'cmake'` initial values for configuration parameters by setting variables in the command line or in the environment. Here is an example:

```
./cmake CC=c99 CFLAGS=-g LIBS=-lposix
```

See also

[Defining Variables](#) for more details.

9.6 Compiling For Multiple Architectures

You can compile the package for more than one kind of computer at the same time, by placing the object files for each architecture in their own directory. To do this, you can use GNU `'make'`. `'cd'` to the directory where you want the object files and executables to go and run the `'configure'` script. `'configure'` automatically checks for the source code in the directory that `'configure'` is in and in `'..'` . This is known as a "VPATH" build.

With a non-GNU 'make', it is safer to compile the package for one architecture at a time in the source code directory. After you have installed the package for one architecture, use 'make distclean' before reconfiguring for another architecture.

On MacOS X 10.5 and later systems, you can create libraries and executables that work on multiple system types--known as "fat" or "universal" binaries--by specifying multiple '-arch' options to the compiler but only a single '-arch' option to the preprocessor. Like this:

```
./configure CC="gcc -arch i386 -arch x86_64 -arch ppc -arch ppc64" \
           CXX="g++ -arch i386 -arch x86_64 -arch ppc -arch ppc64" \
           CPP="gcc -E" CXXCPP="g++ -E"
```

This is not guaranteed to produce working output in all cases, you may have to build one architecture at a time and combine the results using the 'lipo' tool if you have problems.

9.7 Installation Names

By default, 'make install' installs the package's commands under '/usr/local/bin', include files under '/usr/local/include', etc. You can specify an installation prefix other than '/usr/local' by giving 'configure' the option '--prefix=PREFIX', where PREFIX must be an absolute file name.

You can specify separate installation prefixes for architecture-specific files and architecture-independent files. If you pass the option '--exec-prefix=PREFIX' to 'configure', the package uses PREFIX as the prefix for installing programs and libraries. Documentation and other data files still use the regular prefix.

In addition, if you use an unusual directory layout you can give options like '--bindir=DIR' to specify different values for particular kinds of files. Run 'configure --help' for a list of the directories you can set and what kinds of files go in them. In general, the default for these options is expressed in terms of '\${prefix}', so that specifying just '--prefix' will affect all of the other directory specifications that were not explicitly provided.

The most portable way to affect installation locations is to pass the correct locations to 'configure'; however, many packages provide one or both of the following shortcuts of passing variable assignments to the 'make install' command line to change installation locations without having to reconfigure or recompile.

The first method involves providing an override variable for each affected directory. For example, 'make install prefix=/alternate/directory' will choose an alternate location for all directory configuration variables that were expressed in terms of '\${prefix}'. Any directories that were specified during 'configure', but not in terms of '\${prefix}', must each be overridden at install time for the entire installation to be relocated. The approach of makefile variable overrides for each directory variable is required by the GNU Coding Standards, and ideally causes no recompilation. However, some platforms have known limitations with the semantics of shared libraries that end up requiring recompilation when using this method, particularly noticeable in packages that use GNU Libtool.

The second method involves providing the 'DESTDIR' variable. For example, 'make install DESTDIR=/alternate/directory' will prepend '/alternate/directory' before all installation names. The approach of 'DESTDIR' overrides is not required by the GNU Coding Standards, and does not work on platforms that

have drive letters. On the other hand, it does better at avoiding recompilation issues, and works well even when some directory options were not specified in terms of `'${prefix}'` at `'configure'` time.

9.8 Optional Features

If the package supports it, you can cause programs to be installed with an extra prefix or suffix on their names by giving `'cmake'` the option `'--program-prefix=PREFIX'` or `'--program-suffix=SUFFIX'`.

Some packages pay attention to `'--enable-FEATURE'` options to `'configure'`, where `FEATURE` indicates an optional part of the package. They may also pay attention to `'--with-PACKAGE'` options, where `PACKAGE` is something like `'gnu-as'` or `'x'` (for the X Window System). The `'README'` should mention any `'--enable-'` and `'--with-'` options that the package recognizes.

For packages that use the X Window System, `'configure'` can usually find the X include and library files automatically, but if it doesn't, you can use the `'configure'` options `'--x-includes=DIR'` and `'--x-libraries=DIR'` to specify their locations.

Some packages offer the ability to configure how verbose the execution of `'make'` will be. For these packages, running `'./configure --enable-silent-rules'` sets the default to minimal output, which can be overridden with `'make V=1'`; while running `'./configure --disable-silent-rules'` sets the default to verbose, which can be overridden with `'make V=0'`.

9.9 Particular systems

On HP-UX, the default C compiler is not ANSI C compatible. If GNU CC is not installed, it is recommended to use the following options in order to use an ANSI C compiler:

```
./configure CC="cc -Ae -D_XOPEN_SOURCE=500"
```

and if that doesn't work, install pre-built binaries of GCC for HP-UX.

On OSF/1 a.k.a. Tru64, some versions of the default C compiler cannot parse its `<wchar.h>` header file. The option `'-nodtk'` can be used as a workaround. If GNU CC is not installed, it is therefore recommended to try

```
./configure CC="cc"
```

and if that doesn't work, try

```
./configure CC="cc -nodtk"
```

On Solaris, don't put `'/usr/ucb'` early in your `'PATH'`. This directory contains several dysfunctional programs; working variants of these programs are available in `'/usr/bin'`. So, if you need `'/usr/ucb'` in your `'PATH'`, put it *after* `'/usr/bin'`.

On Haiku, software installed for all users goes in `'/boot/common'`, not `'/usr/local'`. It is recommended to use the following options:

```
./cmake -DCMAKE_INSTALL_PREFIX=/boot/common
```

9.10 Specifying the System Type

There may be some features `'configure'` cannot figure out automatically, but needs to determine by the type of machine the package will run on. Usually, assuming the package is built to be run on the *same* architectures, `'configure'` can figure that out, but if it prints a message saying it cannot guess the machine type, give it the `'--build=TYPE'` option. TYPE can either be a short name for the system type, such as `'sun4'`, or a canonical name which has the form CPU-COMPANY-SYSTEM

where SYSTEM can have one of these forms:

- OS
- KERNEL-OS

See the file `'config.sub'` for the possible values of each field. If `'config.sub'` isn't included in this package, then this package doesn't need to know the machine type.

If you are *building* compiler tools for cross-compiling, you should use the option `'--target=TYPE'` to select the type of system they will produce code for.

If you want to use a cross compiler, that generates code for a platform different from the build platform, you should specify the "host" platform (i.e., that on which the generated programs will eventually be run) with `'--host=TYPE'`.

9.11 Sharing Defaults

If you want to set default values for `'configure'` scripts to share, you can create a site shell script called `'config.site'` that gives default values for variables like `'CC'`, `'cache_file'`, and `'prefix'`. `'configure'` looks for `'PREFIX/share/config.site'` if it exists, then `'PREFIX/etc/config.site'` if it exists. Or, you can set the `'CONFIG_SITE'` environment variable to the location of the site script. A warning: not all `'configure'` scripts look for a site script.

9.12 Defining Variables

Variables not defined in a site shell script can be set in the environment passed to `'configure'`. However, some packages may run `'configure'` again during the build, and the customized values of these variables may be lost. In order to avoid this problem, you should set them in the `'configure'` command line, using `'VAR=value'`. For example:

```
./configure CC=/usr/local2/bin/gcc
```

causes the specified `'gcc'` to be used as the C compiler (unless it is overridden in the site shell script).

Unfortunately, this technique does not work for `'CONFIG_SHELL'` due to an Autoconf bug. Until the bug is fixed you can use this workaround:

```
CONFIG_SHELL=/bin/bash /bin/bash ./configure CONFIG_SHELL=/bin/bash
```

9.13 'cmake' Invocation

`'cmake'` recognizes the following options to control how it operates.

- '--help', '-h' print a summary of all of the options to 'cmake', and exit.
- '--help=short', '--help=recursive' print a summary of the options unique to this package's 'configure', and exit. The 'short' variant lists options used only in the top level, while the 'recursive' variant lists options also present in any nested packages.
- '--version', '-V' print the version of Autoconf used to generate the 'configure' script, and exit.
- '--cache-file=FILE' enable the cache: use and save the results of the tests in FILE, traditionally 'config.cache'. FILE defaults to '/dev/null' to disable caching.
- '--config-cache', '-C' alias for '--cache-file=config.cache'.
- '--quiet', '--silent', '-q' do not print messages saying which checks are being made. To suppress all normal output, redirect it to '/dev/null' (any error messages will still be shown).
- '--srcdir=DIR' look for the package's source code in directory DIR. Usually 'configure' can determine that directory automatically.
- '--prefix=DIR' use DIR as the installation prefix.

See also

[Installation Names](#) for more details, including other options available for fine-tuning the installation locations.

- '--no-create', '-n' run the configure checks, but stop before creating any output files.

'cmake' also accepts some other, not widely useful, options. Run 'cmake' --help' for more details.

The 'cmake' script produces an output like this:

```
export LIBSUFFIX_4_CMAKE="-DLIB_SUFFIX=64"
export INSTALL_BASEDIR=/home/user/dev/deliveries
cmake -DCMAKE_INSTALL_PREFIX=${INSTALL_BASEDIR}/airinv-0.5.0 \
-DWITH_STDAIR_PREFIX=${INSTALL_BASEDIR}/stdair-stable \
-DWITH_AIRAC_PREFIX=${INSTALL_BASEDIR}/airrac-stable \
-DWITH_RMOL_PREFIX=${INSTALL_BASEDIR}/rmol-stable \
-DCMAKE_BUILD_TYPE:String=Debug -DINSTALL_DOC:BOOL=ON ${LIBSUFFIX_4_CMAKE} ..

It is recommended that you check if your library has been compiled and linked properly and works as expected. To do so, you should execute the testing process 'make check'. As a result, you should obtain a similar report:

```
[ 0%] Built target hdr_cfg_airinv
[ 0%] Built target hdr_cfg_airrac
[ 13%] Built target airaclib
[ 13%] Built target hdr_cfg_rmol
[ 38%] Built target rmolib
[ 98%] Built target airinvlib
[100%] Built target InventoryTestSuitetst
Scanning dependencies of target check_airinvtst
Test project /home/dan/dev/sim/airinv/airinvgithub/build/test/airinv
  Start 1: InventoryTestSuitetst
1/1 Test #1: InventoryTestSuitetst ..... Passed    0.08 sec

100% tests passed, 0 tests failed out of 1

Total Test time (real) = 0.35 sec
[100%] Built target check_airinvtst
Scanning dependencies of target check
[100%] Built target check
```

Check if all the executed tests PASSED. If not, please contact us by filling a [bug-report](#).

Finally, you should install the compiled and linked library, include files and (optionally) HTML and PDF documentation by typing:

```
make install
```

Depending on the PREFIX settings during configuration, you might need the root (administrator) access to perform this step.

Eventually, you might invoke the following command

```
make clean
```

to remove all files created during compilation process, or even

```
cd ~/dev/sim/airinvgit
rm -rf build && mkdir build
cd build
```

to remove everything.

10 Linking with Airinv

10.1 Table of Contents

- [Introduction](#)
- [Dependencies](#)
- [Using the pkg-config command](#)
- [Using the airinv-config script](#)
- [M4 macro for the GNU Autotools](#)
- [Using Airinv with dynamic linking](#)

10.2 Introduction

There are two convenient methods of linking your programs with the Airinv library. The first one employs the `'pkg-config'` command (see <http://pkgconfig.freedesktop.org/>), whereas the second one uses `'airinv-config'` script. These methods are shortly described below.

10.3 Dependencies

The Airinv library depends on several other C++ components.

10.3.1 StdAir

Among them, as for now, only StdAir has been packaged. The support for StdAir is taken in charge by a dedicated M4 macro file (namely, `'stdair.m4'`), from the configuration script (generated thanks to `'configure.ac'`).

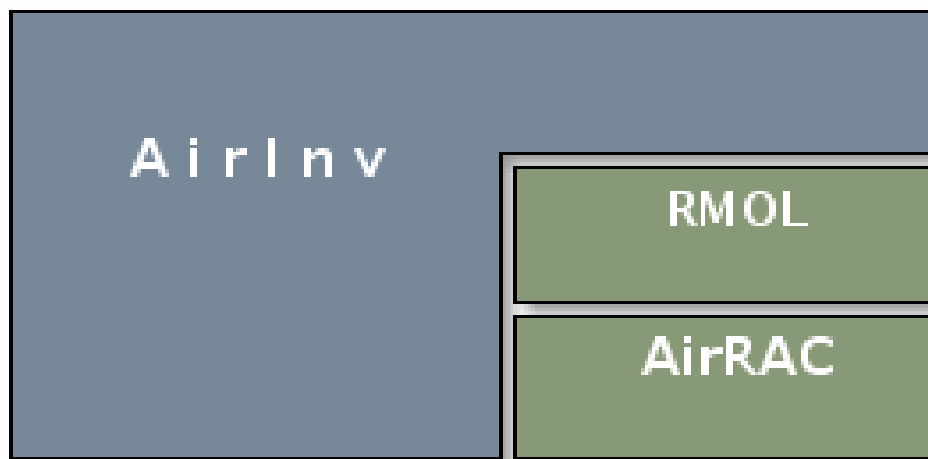

Figure 1: Airinv Dependencies

10.4 Using the pkg-config command

`'pkg-config'` is a helper tool used when compiling applications and libraries. It helps you insert the correct compiler and linker options. The syntax of the `'pkg-config'` is as follows:

```
pkg-config <options> <library_name>
```

For instance, assuming that you need to compile an Airinv based program `'my_prog.cpp'`, you should use the following command:

```
g++ `pkg-config --cflags airinv` -o my_prog my_prog.cpp `pkg-config --libs airinv`
```

For more information see the `'pkg-config'` man pages.

10.5 Using the airinv-config script

Airinv provides a shell script called `airinv-config`, which is installed by default in ``$prefix/bin'` (``/usr/local/bin'`) directory. It can be used to simplify compilation and linking of Airinv based programs. The usage of this script is quite similar to the usage of the ``pkg-config'` command.

Assuming that you need to compile the program ``my_prog.cpp'` you can now do that with the following command:

```
g++ `airinv-config --cflags` -o my_prog_opt my_prog.cpp `airinv-config --libs`
```

A list of ``airinv-config'` options can be obtained by typing:

```
airinv-config --help
```

If the ``airinv-config'` command is not found by your shell, you should add its location ``$prefix/bin'` to the `PATH` environment variable, e.g.:

```
export PATH=/usr/local/bin:$PATH
```

10.6 M4 macro for the GNU Autotools

A M4 macro file is delivered with Airinv, namely ``airinv.m4'`, which can be found in, e.g., ``/usr/share/aclocal'`. When used by a ``configure'` script, thanks to the ``AM_PATH_Airinv'` macro (specified in the M4 macro file), the following Makefile variables are then defined:

- ``Airinv_VERSION'` (e.g., defined to 0.23.0)
- ``Airinv_CFLAGS'` (e.g., defined to ``-I${prefix}/include'`)
- ``Airinv_LIBS'` (e.g., defined to ``-L${prefix}/lib -lairinv'`)

10.7 Using Airinv with dynamic linking

When using static linking some of the library routines in Airinv are copied into your executable program. This can lead to unnecessary large executables. To avoid having too large executable files you may use dynamic linking instead. Dynamic linking means that the actual linking is performed when the program is executed. This requires that the system is able to locate the shared Airinv library file during your program execution. If you install the Airinv library using a non-standard prefix, the ``LD_LIBRARY_PATH'` environment variable might be used to inform the linker of the dynamic library location, e.g.:

```
export LD_LIBRARY_PATH=<Airinv installation prefix>/lib:$LD_LIBRARY_PATH
```

11 Test Rules

This section describes rules how the functionality of the IT++ library should be verified. In the ``tests'` subdirectory test files are provided. All functionality should be tested using these test files.

11.1 The Test File

Each new IT++ module/class should be accompanied with a test file. The test file is an implementation in C++ that tests the functionality of a function/class or a group of functions/classes called modules. The test file should test relevant parameter settings and input/output relations to guarantee correct functionality of the corresponding classes/functions. The test files should be maintained using version control and updated whenever new functionality is added to the IT++ library.

The test file should print relevant data to a standard output that can be used to verify the functionality. All relevant parameter settings should be tested.

The test file should be placed in the ``tests'` subdirectory and should have a name ending with ``_test.cpp'`.

11.2 The Reference File

Consider a test file named `'module_test.cpp'`. A reference file named `'module_test.ref'` should accompany the test file. The reference file contains a reference printout of the standard output generated when running the test program. The reference file should be maintained using version control and updated according to the test file.

11.3 Testing IT++ Library

One can compile and execute all test programs from `'tests'` subdirectory by typing

```
% make check
```

after successful compilation of the IT++ library.

 - [Airline Schedule BOM Tree](#)
- [Extending the BOM Tree](#)
- [The travel solution calculation procedure](#)

12.2 Introduction

The `AirInv` library contains classes for airline business management. This document does not cover all the aspects of the `AirInv` library. It does however explain the most important things you need to know in order to start using `AirInv`.

12.3 Get Started

12.3.1 Get the AirInv library

Clone locally the full [Git project](#):

```
cd ~
mkdir -p dev/sim
cd ~/dev/sim
git clone git://airinv.git.sourceforge.net/gitroot/airinv/airinv airinvgit
cd airinvgit
git checkout trunk
```

12.3.2 Build the AirInv project

Link with StdAir, create the distribution package (say, 0.5.0) and compile using the following commands:

```
cd ~/dev/sim/airinvgit
rm -rf build && mkdir -p build
cd build
cmake -DCMAKE_INSTALL_PREFIX=~/dev/deliveries/airinv-0.5.0 \
  -DWITH_STDAIR_PREFIX=~/dev/deliveries/stdair-stable \
  -DCMAKE_BUILD_TYPE:String=Debug -DINSTALL_DOC:BOOL=ON ..
make
```

12.3.3 Build and Run the Tests

After building the AirInv project, the following commands run the tests:

```
cd ~/dev/sim/airinvgit
cd build
make check
```

As a result, you should obtain a similar report:

```
[ 0%] Built target hdr_cfg_airinv
[ 96%] Built target airinvlib
[100%] Built target AirlineScheduleTestSuitetst
Scanning dependencies of target check_airinvtst
Test project /home/dan/dev/sim/airinv/airinvgithub/build/test/airinv
  Start 1: AirlineScheduleTestSuitetst
1/1 Test #1: AirlineScheduleTestSuitetst ..... Passed    0.15 sec

100% tests passed, 0 tests failed out of 1

Total Test time (real) = 0.40 sec
[100%] Built target check_airinvtst
Scanning dependencies of target check
[100%] Built target check
```

12.3.4 Install the AirInv Project (Binaries, Documentation)

After the step [Build the AirInv project](#), to install the library and its header files, type:

```
cd ~/dev/sim/airinvgit
cd build
make install
```

You can check that the executables and other required files have been copied into the given final directory:

```
cd ~/dev/deliveries/airinv-0.5.0
```

To generate the AirInv project documentation, the commands are:

```
cd ~/dev/sim/airinvgit
cd build
make doc
```

The AirInv project documentation is available in the following formats: HTML, LaTeX. Those documents are available in a subdirectory:

```
cd ~/dev/sim/airinvgit
cd build
cd doc
```

12.4 Input file of AirInv Project

The schedule input file structure should look like the following sample:

Each line, beyond the header, represents a schedule entry, i.e., the specification of a given flight-period (see [AIR-INV::FlightPeriodStruct](#)). The fields are as follows:

- Flights section
 - AirlineCode (e.g., BA)
 - FlightNumber (e.g., 9)
 - Start of the flight departure period (e.g., 2007-04-20)
 - End of the flight departure period (e.g., 2007-06-30)
 - Day-Of-the-Week for the flight departure period (DOW) (e.g., 0000011)
 - Leg section
 - Segment section
- Leg section
 - BoardPoint (e.g., LHR)
 - OffPoint (e.g., BKK)
 - BoardTime (e.g., 22:00)
 - ArrivalTime (e.g., 15:15)
 - ArrivalDateOffSet (e.g., +1)
 - ElapsedTime (e.g., 11:15)
 - Leg-cabin section
- Leg-cabin section
 - Cabin code (e.g., F, J, W or Y)
 - Capacity (e.g., respectively 5, 12, 20 or 300)
- Segment section
 - Specificity flag:
 - * 0 means that all the segments behave the same way, i.e., have got the same dressing (distribution and order of the booking classes per cabin)
 - * 1 means that each segment behave differently. The full specification of each of those segments must therefore be given.
 - Segment-cabin section
 - Fare family section

- Segment-cabin section
 - Cabin code (e.g., F, J, W or Y)
 - List of (one-letter-code) booking classes for the cabin (e.g, respectively FA, JCDI, WT or YBHKMLSQ)
- Fare family section
 - Fare family code (e.g., 1)
 - List of (one-letter-code) booking classes for the fare family (e.g, respectively FA, JCDI, WT or YBHKMLSQ)

Some fare input examples (including the example above named `schedule03.csv`) are given in the `StdAir` project.

12.5 The schedule BOM Tree

The schedule-related Business Object Model (BOM) tree is a structure allowing to store all the `AIRINV::FlightPeriodStruct` objects of the simulation. That is why parsing an input file, containing the specification for all the flight-periods, is more convenient (

See also

the previous section [Input file of AirInv Project](#)).

As it may be time consuming, and it for sure requires some know-how, to first build such a schedule input file, a small sample BOM tree is provided by default when needed.

12.5.1 Build of the schedule BOM tree

First, a BOM root object (i.e., a root for all the classes in the project) is instantiated by the `stdair::STDAIR_ServiceContext` context object, when the `stdair::STDAIR_Service` is itself instantiated (during the instantiation of the `AIRINV::AIRINV_Service` object).

The corresponding type (class) `stdair::BomRoot` is defined in the `StdAir` library.

Then, the BOM root can be either constructed thanks to the `AIRINV::AIRINV_Service::buildSampleBom()` method:

```
void buildSampleBom();
```

or can be constructed using the schedule input file described above thanks to the `AIRINV::AIRINV_Service::parseAndLoad` (`const stdair::Filename_T&`) method:

```
void parseAndLoad (const stdair::Filename_T& iInventoryFilename);
```

12.5.2 Display of the schedule BOM tree

Note

That feature (of BOM tree display) has not been implemented yet. Do not hesitate to [open a ticket](#) if you would like to have it implemented more quickly.

The schedule BOM tree can be displayed as done in the `batches::airinv.cpp` program:

When the default BOM tree is used (-b/--builtin option of the main program `airinv.cpp`), the schedule BOM tree display (for now, corresponding to `schedule01.csv` parsed by `AIRINV::parseInventory`) should look like:

```

12.6 Exploring the Predefined BOM Tree

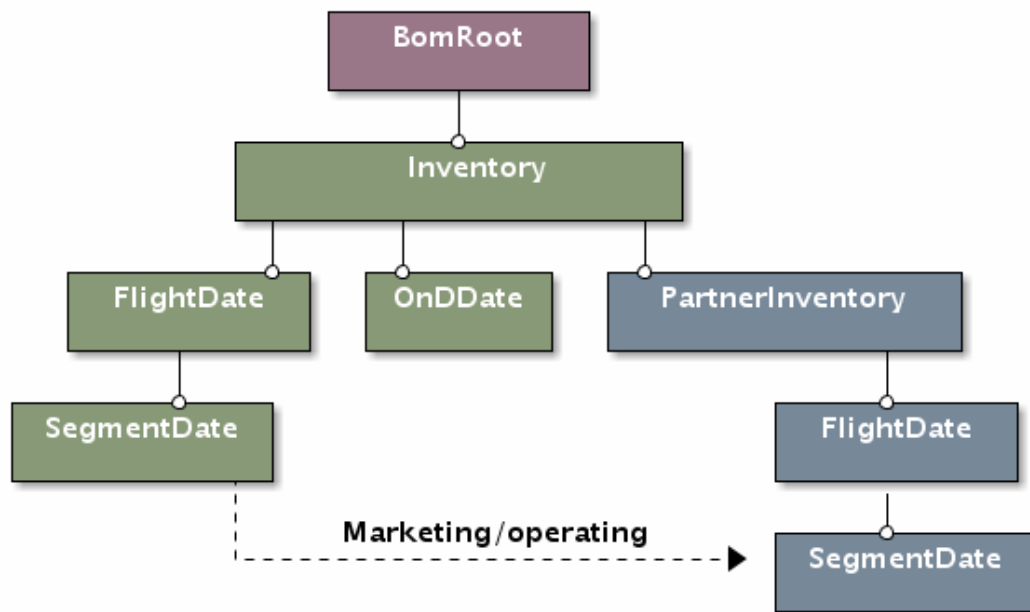

Figure 2: AirInv BOM tree

`AirInv` predefines a BOM (Business Object Model) tree specific to the airline IT arena.

12.6.1 Airline Network BOM Tree

- `AIRINV::ReachableUniverse`
- `AIRINV::OriginDestinationSet`
- `AIRINV::SegmentPathPeriod`

12.6.2 Airline Schedule BOM Tree

- `stdair::Inventory`
- `stdair::FlightPeriod`
- `stdair::SegmentPeriod`
- `stdair::OnDPeriod`

12.7 Extending the BOM Tree

12.8 The travel solution calculation procedure

The project `AirInv` aims at calculating a list of **travel solutions** for every incoming **booking request**.

13 Supported Systems

13.2 Introduction

This page is intended to provide a list of AirInv supported systems, i.e. the systems on which configuration, installation and testing process of the AirInv library has been successful. Results are grouped based on minor release number. Therefore, only the latest tests for bug-fix releases are included. Besides, the information on this page is divided into sections dependent on the operating system.

Where necessary, some extra information is given for each tested configuration, e.g. external libraries installed, configuration commands used, etc.

If you manage to compile, install and test the AirInv library on a system not mentioned below, please let us know, so we could update this database.

14 AirInv Supported Systems (Previous Releases)

14.1 AirInv 3.9.1

14.2 AirInv 3.9.0

14.3 AirInv 3.8.1

15 Tutorials

15.2 Preparing the AirSched Project for Development

The source code for these examples can be found in the `batches` and `test/airsched` directories. They are compiled along with the rest of the `AirSched` project. See the [Users Guide](#) for more details on how to build the `AirSched` project.

15.3 Your first networkBuilde

15.3.1 Summary of the different steps

All the steps below can be found in the same order in the batch `AirSched.cpp` program.

First, we instantiate the `AIRSCHEM_Service` object:

Then, we construct a default sample list of travel solutions and a default booking request (as mentioned in `ug_procedure_bookingrequest` and `ug_procedure_travelsolution` parts):

For basic use, the default BOM tree can be built using:

The main step is the network building (see [The travel solution calculation procedure](#)):

15.3.2 Result of the Batch Program

When the `AirSched.cpp` program is run (with the `-b` option), the log output file should look like:

What is interesting is to compare the travel solution list (here reduced to a single travel solution) displayed before:

and after the network building:

Between the two groups of dashes, we can see that a network option structure has been added by the network builder: the price is 450 EUR for the Y class, the ticket is refundable but there are exchange fees and the customer must stay over on Saturday night.

Let's return to our default BOM tree display: the only network rule stored was a match for the travel solution into consideration (same origin airport, same destination airport, flight date included in the network rule date range, same airline "BA", ...).

By looking at the network rule trip type "RT", we can guess we face a round trip network: that means the price given in the default bom tree construction in `stdair::CmdBomManager.hpp` has been divided by 2 because we are considering either an inbound trip or an outbound one.

15.4 Network building with an input file

15.4.1 How to build a network input file?

The objective here is to build a network input file to network build the default travel solution list built using:

This travel solution list, reduced to a singleton, can be displayed as done before:

We deduce:

- we need a network rule whose origin-destination couple is "LHR, SYD".
- the date range must include the date "2011-06-10".
- the time range must include the time "21:45".
- the airline operating is "BA", so it must be the airline pricing.

We can deduce a part of our network rule file :

We have no information about stay duration and advance purchase (such information are contained into the booking request): so let us put "0" to embrace all the requests possible.

No information for the point-of-sale and the channel too: let us consider all the channels ("IN", "DN", "IF" and "DF") and all the points of sale (the origin "LHR", the destination "SYD" and the rest-of-the-world "ROW") existing. To access this information, we could look into the default booking request.

The input file is now:

Let us say we have just the Economy cabin "Y" and British Airways prices ticket for class "Y".

No information about the trip type, so we duplicate all the network rules for both type: one-way "OW" and round-trip "RT" (to access this information, we could look to the default booking request).

The network options are all set to a default value "T" (meaning true) and the network values are chosen to be all distinct.

We obtain:

15.4.2 Building the BOM tree with an input file

The steps are the same as before [Summary of the different steps](#) except the bom tree must be built using the network input file :

15.4.3 Result of the Batch Program

When the `AirSched.cpp` program is run with the `-f` option linking with the file built just above:

```
~/AirSched -f ~/<YourFileName>.csv
```

the last lines of the log output should look like:

```
[D]~/AirSchedgit/AirSched/batches/AirSched.cpp:223: Travel solutions:
    [0] [0] BA, 9, 2011-06-10, LHR, SYD, 21:45 --- Y, 145, 1 1 1 ---
```

We have just one network option added to the travel solution. We can deduce from the price value 145 that the network builder used the network rule number 15 to price the travel solution. We have an inbound or outbound trip of a round trip: the total price 290 has been divided by 2.

16 Command-Line Test to Demonstrate How To Test the AirInv Project

23.1.1 Typedef Documentation

23.1.1.1 typedef boost::shared_ptr<[AIRINV_Service](#)> [AIRINV::AIRINV_ServicePtr_T](#)

(Smart) Pointer on the AirInv (slave) service handler.

Definition at line 110 of file [AIRINV_Types.hpp](#).

23.1.1.2 typedef boost::shared_ptr<[AIRINV_Master_Service](#)> [AIRINV::AIRINV_Master_ServicePtr_T](#)

(Smart) Pointer on the AirInv master service handler.

Definition at line 115 of file [AIRINV_Types.hpp](#).

23.1.1.3 typedef std::map<const stdair::AirlineCode_T, [AIRINV_ServicePtr_T](#)> [AIRINV::AIRINV_ServicePtr_Map_T](#)

Type defining a map of airline codes and the corresponding airline inventories.

Definition at line 122 of file [AIRINV_Types.hpp](#).

23.1.1.4 typedef std::map<const stdair::DTD_T, double> [AIRINV::FRAT5Curve_T](#)

Define the FRAT5 curve.

Definition at line 127 of file [AIRINV_Types.hpp](#).

23.1.1.5 typedef char [AIRINV::char_t](#)

Definition at line 31 of file [BasParserTypes.hpp](#).

23.1.1.6 typedef boost::spirit::classic::file_iterator<[char_t](#)> [AIRINV::iterator_t](#)

Definition at line 35 of file [BasParserTypes.hpp](#).

23.1.1.7 typedef boost::spirit::classic::scanner<[iterator_t](#)> [AIRINV::scanner_t](#)

Definition at line 36 of file [BasParserTypes.hpp](#).

List of FareFamily-Detail structures.

Definition at line 56 of file [FareFamilyStruct.hpp](#).

23.1.1.27 `typedef std::vector<LegCabinStruct> AIRINV::LegCabinStructList_T`

List of LegCabin-Detail structures.

Definition at line 52 of file [LegCabinStruct.hpp](#).

23.1.1.28 `typedef std::vector<LegStruct> AIRINV::LegStructList_T`

List of Leg structures.

Definition at line 55 of file [LegStruct.hpp](#).

23.1.1.29 `typedef std::vector<SegmentCabinStruct> AIRINV::SegmentCabinStructList_T`

List of SegmentCabin-Detail structures.

Definition at line 48 of file [SegmentCabinStruct.hpp](#).

23.1.1.30 `typedef std::vector<SegmentStruct> AIRINV::SegmentStructList_T`

List of Segment structures.

Definition at line 43 of file [SegmentStruct.hpp](#).

23.1.1.31 `typedef std::map<const stdair::Date_T, stdair::SegmentCabin*> AIRINV::DepartureDateSegmentCabinMap_T`

Definition at line 29 of file [InventoryManager.hpp](#).

23.1.1.32 `typedef std::map<const std::string, DepartureDateSegmentCabinMap_T>
AIRINV::SimilarSegmentCabinSetMap_T`

Definition at line 31 of file [InventoryManager.hpp](#).

23.1.1.33 `typedef boost::shared_ptr<boost::thread> AIRINV::ThreadShrPtr_T`

Definition at line 15 of file [AirInvServer_ASIO.cpp](#).

23.1.1.34 `typedef std::vector<ThreadShrPtr_T> AIRINV::ThreadShrPtrList_T`

Definition at line 16 of file [AirInvServer_ASIO.cpp](#).

23.1.1.35 `typedef boost::shared_ptr<Connection> AIRINV::ConnectionShrPtr_T`

Shared pointer on a [Connection](#) object.

Definition at line 71 of file [Connection.hpp](#).

23.1.2 Variable Documentation

23.1.2.1 `const std::string AIRINV::DEFAULT_AIRLINE_CODE = "BA"`

Default airline name for the [AIRINV_Service](#).

Definition at line 11 of file [BasConst.cpp](#).

23.1.2.2 `const FRAT5Curve_T AIRINV::DEFAULT_PICKUP_FRAT5_CURVE`

Initial value:

```
DefaultMap::createPickupFRAT5Curve()
```

Default pick-up FRAT5 curve for Q-equivalent booking conversion.

Definition at line 14 of file [BasConst.cpp](#).

24.1.1 Detailed Description

Interface for the [AIRINV](#) Services.

Definition at line 41 of file [AIRINV_Master_Service.hpp](#).

24.1.2 Constructor & Destructor Documentation

24.1.2.1 AIRINV::AIRINV_Master_Service::AIRINV_Master_Service (const stdair::BasLogParams & iLogParams, const stdair::BasDBParams & iDBParams)

Constructor.

The `initSlaveAirinvService()` method is called; see the corresponding documentation for more details.

A reference on an output stream is given, so that log outputs can be directed onto that stream.

Moreover, database connection parameters are given, so that a session can be created on the corresponding database.

Parameters

<i>const</i>	stdair::BasLogParams& Parameters for the output log stream.
<i>const</i>	stdair::BasDBParams& Parameters for the database access.

Definition at line 44 of file [AIRINV_Master_Service.cpp](#).

24.1.2.2 AIRINV::AIRINV_Master_Service::AIRINV_Master_Service (const stdair::BasLogParams & iLogParams)

Constructor.

The initSlaveAirinvService() method is called; see the corresponding documentation for more details.

A reference on an output stream is given, so that log outputs can be directed onto that stream.

Parameters

<i>const</i>	stdair::BasLogParams& Parameters for the output log stream.
--------------	---

Definition at line 66 of file [AIRINV_Master_Service.cpp](#).

24.1.2.3 AIRINV::AIRINV_Master_Service::AIRINV_Master_Service (stdair::STDAIR_ServicePtr_T ioSTDAIR_Service_ptr)

Constructor.

The initSlaveAirinvService() method is called; see the corresponding documentation for more details.

Moreover, as no reference on any output stream is given, it is assumed that the StdAir log service has already been initialised with the proper log output stream by some other methods in the calling chain (for instance, when the [AIRINV_Master_Service](#) is itself being initialised by another library service such as SIMCRS_Service).

Parameters

<i>stdair::STDAIR_ServicePtr_T</i>	Reference on the STDAIR service.
------------------------------------	----------------------------------

Definition at line 87 of file [AIRINV_Master_Service.cpp](#).

24.1.2.4 AIRINV::AIRINV_Master_Service::~~AIRINV_Master_Service ()

Destructor.

Definition at line 103 of file [AIRINV_Master_Service.cpp](#).

24.1.3 Member Function Documentation

24.1.3.1 void AIRINV::AIRINV_Master_Service::parseAndLoad (const stdair::Filename_T & iInventoryFilename)

Parse the inventory dump and load it into memory.

The CSV file, describing the airline inventory for the simulator, is parsed and instantiated in memory accordingly.

Parameters

<i>const</i>	stdair::Filename_T& Filename of the input demand file.
--------------	--

Definition at line 204 of file [AIRINV_Master_Service.cpp](#).

References [AIRINV::AIRINV_Service::parseAndLoad\(\)](#).

24.1.3.2 void AIRINV::AIRINV_Master_Service::parseAndLoad (const stdair::Filename_T & iScheduleFilename, const stdair::Filename_T & iODInputFilename, const AIRRAC::YieldFilePath & iYieldFilename)

Parse the schedule and O&D input files, and load them into memory.

The CSV files, describing the airline schedule and the O&Ds for the simulator, are parsed and instantiated in memory accordingly.

Parameters

<i>const</i>	stdair::Filename_T& Filename of the input schedule file.
<i>const</i>	stdair::Filename_T& Filename of the input O&D file.
<i>const</i>	AIRRAC::YieldFilePath& Filename of the input yield file.

Definition at line 227 of file [AIRINV_Master_Service.cpp](#).

References [AIRINV::AIRINV_Service::parseAndLoad\(\)](#).

**24.1.3.3 void AIRINV::AIRINV_Master_Service::initSnapshotAndRMEvents (const stdair::Date_T & *iStartDate*,
const stdair::Date_T & *iEndDate*)**

Initialise the snapshot and RM events for the inventories.

Parameters

<i>const</i>	stdair::Date_T& Parameters for the start date.
<i>const</i>	stdair::Date_T& Parameters for the end date.

Definition at line 429 of file [AIRINV_Master_Service.cpp](#).

References [AIRINV::AIRINV_Service::initRMEvents\(\)](#).

24.1.3.4 void AIRINV::AIRINV_Master_Service::buildSampleBom ()

Build a sample BOM tree, and attach it to the BomRoot instance.

The BOM tree is based on two actual inventories (one for BA, another for AF). Each inventory contains one flight. One of those flights has two legs (and therefore three segments).

Definition at line 252 of file [AIRINV_Master_Service.cpp](#).

References [AIRINV::AIRINV_Service::buildSampleBom\(\)](#).

**24.1.3.5 void AIRINV::AIRINV_Master_Service::calculateAvailability (stdair::TravelSolutionStruct & *ioTravelSolution*,
const stdair::PartnershipTechnique & *iPartnershipTechnique*)**

Compute the availability for the given travel solution.

Definition at line 468 of file [AIRINV_Master_Service.cpp](#).

References [AIRINV::AIRINV_Service::calculateAvailability\(\)](#).

**24.1.3.6 bool AIRINV::AIRINV_Master_Service::sell (const std::string & *iSegmentDateKey*, const stdair::ClassCode_T
& *iClassCode*, const stdair::PartySize_T & *iPartySize*)**

Register a booking.

Parameters

<i>const</i>	std::string& Key for the segment on which the sale is made.
<i>const</i>	stdair::ClassCode_T& Class code where the sale is made.
<i>const</i>	stdair::PartySize_T& Party size.

Returns

bool Whether or not the sale was successfull

Definition at line 499 of file [AIRINV_Master_Service.cpp](#).

References [AIRINV::AIRINV_Service::sell\(\)](#).

24.1.3.7 bool [AIRINV::AIRINV_Master_Service::cancel](#) (const std::string & *iSegmentDateKey*, const stdair::ClassCode_T & *iClassCode*, const stdair::PartySize_T & *iPartySize*)

Register a cancellation.

Parameters

<i>const</i>	std::string& Key for the segment on which the cancellation is made.
<i>const</i>	stdair::ClassCode_T& Class code where the sale is made.
<i>const</i>	stdair::PartySize_T& Party size.

Returns

bool Whether or not the sale was successfull

Definition at line 541 of file [AIRINV_Master_Service.cpp](#).

References [AIRINV::AIRINV_Service::cancel\(\)](#).

24.1.3.8 void [AIRINV::AIRINV_Master_Service::takeSnapshots](#) (const stdair::SnapshotStruct & *iSnapshot*)

Take inventory snapshots.

Definition at line 584 of file [AIRINV_Master_Service.cpp](#).

References [AIRINV::AIRINV_Service::takeSnapshots\(\)](#).

24.1.3.9 void [AIRINV::AIRINV_Master_Service::optimise](#) (const stdair::RMEventStruct & *iRMEvent*, const stdair::ForecastingMethod & *iForecastingMethod*, const stdair::PartnershipTechnique & *iPartnershipTechnique*)

Optimise (revenue management) an flight-date/network-date

Definition at line 610 of file [AIRINV_Master_Service.cpp](#).

References [AIRINV::AIRINV_Service::optimise\(\)](#).

24.1.3.10 std::string [AIRINV::AIRINV_Master_Service::jsonExport](#) (const stdair::AirlineCode_T & *iAirlineCode*, const stdair::FlightNumber_T & *iFlightNumber*, const stdair::Date_T & *iDepartureDate*) const

Recursively dump, in the returned string and in JSON format, the flight-date corresponding to the parameters given as input.

Parameters

<i>const</i>	stdair::AirlineCode_T& Airline code of the flight to dump.
<i>const</i>	stdair::FlightNumber_T& Flight number of the flight to dump.
<i>const</i>	stdair::Date_T& Departure date of the flight to dump.

Returns

std::string Output string in which the BOM tree is JSON-ified.

Definition at line 304 of file [AIRINV_Master_Service.cpp](#).

References [AIRINV::AIRINV_Service::jsonExport\(\)](#).

24.1.3.11 `std::string AIRINV::AIRINV_Master_Service::list (const stdair::AirlineCode_T & iAirlineCode = "all",
const stdair::FlightNumber_T & iFlightNumber = 0) const`

Display the list of flight-dates (contained within the BOM tree) corresponding to the parameters given as input.

Parameters

<i>const</i>	AirlineCode& Airline for which the flight-dates should be displayed. If set to "all" (the default), all the inventories will be displayed.
<i>const</i>	FlightNumber_T& Flight number for which all the departure dates should be displayed. If set to 0 (the default), all the flight numbers will be displayed.

Returns

std::string Output string in which the BOM tree is logged/dumped.

Definition at line 330 of file [AIRINV_Master_Service.cpp](#).

References [AIRINV::AIRINV_Service::list\(\)](#).

24.1.3.12 `bool AIRINV::AIRINV_Master_Service::check (const stdair::AirlineCode_T & iAirlineCode, const
stdair::FlightNumber_T & iFlightNumber, const stdair::Date_T & iDepartureDate) const`

Check whether the given flight-date is a valid one.

Parameters

<i>const</i>	stdair::AirlineCode_T& Airline code of the flight to check.
<i>const</i>	stdair::FlightNumber_T& Flight number of the flight to check.
<i>const</i>	stdair::Date_T& Departure date of the flight to check.

Returns

bool Whether or not the given flight date is valid.

Definition at line 355 of file [AIRINV_Master_Service.cpp](#).

References [AIRINV::AIRINV_Service::check\(\)](#).

24.1.3.13 `std::string AIRINV::AIRINV_Master_Service::csvDisplay () const`

Recursively display (dump in the returned string) the objects of the BOM tree.

Returns

std::string Output string in which the BOM tree is logged/dumped.

Definition at line 380 of file [AIRINV_Master_Service.cpp](#).

References [AIRINV::AIRINV_Service::csvDisplay\(\)](#).

24.1.3.14 `std::string AIRINV::AIRINV_Master_Service::csvDisplay (const stdair::AirlineCode_T & iAirlineCode, const
stdair::FlightNumber_T & iFlightNumber, const stdair::Date_T & iDepartureDate) const`

Recursively display (dump in the returned string) the flight-date corresponding to the parameters given as input.

Parameters

<i>const</i>	stdair::AirlineCode_T& Airline code of the flight to display.
<i>const</i>	stdair::FlightNumber_T& Flight number of the flight to display.
<i>const</i>	stdair::Date_T& Departure date of the flight to display.

Returns

std::string Output string in which the BOM tree is logged/dumped.

Definition at line 403 of file [AIRINV_Master_Service.cpp](#).

References [AIRINV::AIRINV_Service::csvDisplay\(\)](#).

24.3.1 Detailed Description

Interface for the [AIRINV](#) Services.

Definition at line 37 of file [AIRINV_Service.hpp](#).

24.3.2 Constructor & Destructor Documentation

24.3.2.1 AIRINV::AIRINV_Service::AIRINV_Service (const stdair::BasLogParams & iLogParams, const stdair::BasDBParams & iDBParams)

Constructor.

The `initAirinvService()` method is called; see the corresponding documentation for more details.

A reference on an output stream is given, so that log outputs can be directed onto that stream.

Moreover, database connection parameters are given, so that a session can be created on the corresponding database.

Parameters

<i>const</i>	stdair::BasLogParams& Parameters for the output log stream.
<i>const</i>	stdair::BasDBParams& Parameters for the database access.

Definition at line 74 of file [AIRINV_Service.cpp](#).

24.3.2.2 AIRINV::AIRINV_Service::AIRINV_Service (const stdair::BasLogParams & iLogParams)

Constructor.

The `initAirinvService()` method is called; see the corresponding documentation for more details.

A reference on an output stream is given, so that log outputs can be directed onto that stream.

Parameters

<i>const</i>	stdair::BasLogParams& Parameters for the output log stream.
--------------	---

Definition at line 48 of file [AIRINV_Service.cpp](#).

24.3.2.3 AIRINV::AIRINV_Service::AIRINV_Service (stdair::STDAIR_ServicePtr_T ioSTDAIR_Service_ptr)

Constructor.

The initAirInvService() method is called; see the corresponding documentation for more details.

Moreover, as no reference on any output stream is given, it is assumed that the StdAir log service has already been initialised with the proper log output stream by some other methods in the calling chain (for instance, when the [AIRINV_Master_Service](#) is itself being initialised by another library service such as [SIMCRS_Service](#)).

Parameters

<i>stdair::STDAIR_ServicePtr_T</i>	Reference on the STDAIR service.
<i>const</i>	stdair::Filename_T& Filename of the input inventory file.

Definition at line 101 of file [AIRINV_Service.cpp](#).

24.3.2.4 AIRINV::AIRINV_Service::~~AIRINV_Service ()

Destructor.

Definition at line 124 of file [AIRINV_Service.cpp](#).

24.3.3 Member Function Documentation

24.3.3.1 void AIRINV::AIRINV_Service::parseAndLoad (const stdair::Filename_T & iInventoryFilename)

Parse the inventory dump and load it into memory.

The CSV file, describing the airline inventory for the simulator, is parsed and instantiated in memory accordingly.

Parameters

<i>const</i>	stdair::Filename_T& Filename of the input demand file.
--------------	--

Definition at line 251 of file [AIRINV_Service.cpp](#).

24.3.3.4 stdair::RMEventList_T AIRINV::AIRINV_Service::initRMEvents (const stdair::Date_T & iStartDate, const stdair::Date_T & iEndDate)

Initialise the RM events for the inventory.

Parameters

<i>const</i>	stdair::Date_T& Parameters for the start date.
<i>const</i>	stdair::Date_T& Parameters for the end date.

Definition at line 493 of file [AIRINV_Service.cpp](#).

Referenced by [AIRINV::AIRINV_Master_Service::initSnapshotAndRMEvents\(\)](#).

24.3.3.5 void AIRINV::AIRINV_Service::calculateAvailability (stdair::TravelSolutionStruct & ioTravelSolution, const stdair::PartnershipTechnique & iPartnershipTechnique)

Compute the availability for the given travel solution.

Definition at line 525 of file [AIRINV_Service.cpp](#).

Referenced by [AIRINV::AIRINV_Master_Service::calculateAvailability\(\)](#).

24.3.3.6 bool AIRINV::AIRINV_Service::sell (const std::string & iSegmentDateKey, const stdair::ClassCode_T & iClassCode, const stdair::PartySize_T & iPartySize)

Register a booking.

Parameters

<i>const</i>	std::string& Key for the segment on which the sale is made
<i>const</i>	stdair::ClassCode_T& Class code where the sale is made
<i>const</i>	stdair::PartySize_T& Party size

Returns

bool Whether or not the sale was successful

Definition at line 552 of file [AIRINV_Service.cpp](#).

Referenced by [AIRINV::AIRINV_Master_Service::sell\(\)](#).

24.3.3.7 bool AIRINV::AIRINV_Service::cancel (const std::string & iSegmentDateKey, const stdair::ClassCode_T & iClassCode, const stdair::PartySize_T & iPartySize)

Register a cancellation.

Parameters

<i>const</i>	std::string& Key for the segment on which the cancellation is made
<i>const</i>	stdair::ClassCode_T& Class code where the sale is made
<i>const</i>	stdair::PartySize_T& Party size

Returns

bool Whether or not the sale was successfull

Definition at line 593 of file [AIRINV_Service.cpp](#).

Referenced by [AIRINV::AIRINV_Master_Service::cancel\(\)](#).

24.3.3.8 void **AIRINV::AIRINV_Service::takeSnapshots** (const stdair::AirlineCode_T & *iAirlineCode*, const stdair::DateTime_T & *iSnapshotTime*)

Take inventory snapshots.

Definition at line 637 of file [AIRINV_Service.cpp](#).

Referenced by [AIRINV::AIRINV_Master_Service::takeSnapshots\(\)](#).

24.3.3.9 void **AIRINV::AIRINV_Service::optimise** (const stdair::AirlineCode_T & *iAirlineCode*, const stdair::KeyDescription_T & *iFDDescription*, const stdair::DateTime_T & *iRMEventTime*, const stdair::ForecastingMethod & *iForecastingMethod*, const stdair::PartnershipTechnique & *iPartnershipTechnique*)

Optimise (revenue management) an flight-date/network-date

Definition at line 664 of file [AIRINV_Service.cpp](#).

Referenced by [AIRINV::AIRINV_Master_Service::optimise\(\)](#).

24.3.3.10 std::string **AIRINV::AIRINV_Service::jsonExport** (const stdair::AirlineCode_T & *iAirlineCode*, const stdair::FlightNumber_T & *iFlightNumber*, const stdair::Date_T & *iDepartureDate*) const

Recursively dump, in the returned string and in JSON format, the flight-date corresponding to the parameters given as input.

Parameters

<i>const</i>	stdair::AirlineCode_T& Airline code of the flight to dump.
<i>const</i>	stdair::FlightNumber_T& Flight number of the flight to dump.
<i>const</i>	stdair::Date_T& Departure date of the flight to dump.

Returns

std::string Output string in which the BOM tree is JSON-ified.

Definition at line 376 of file [AIRINV_Service.cpp](#).

Referenced by [AIRINV::AIRINV_Master_Service::jsonExport\(\)](#).

24.3.3.11 std::string **AIRINV::AIRINV_Service::list** (const stdair::AirlineCode_T & *iAirlineCode* = "all", const stdair::FlightNumber_T & *iFlightNumber* = 0) const

Display the list of flight-dates (contained within the BOM tree) corresponding to the parameters given as input.

Parameters

<i>const</i>	AirlineCode& Airline for which the flight-dates should be displayed. If set to "all" (the default), all the inventories will be displayed.
<i>const</i>	FlightNumber_T& Flight number for which all the departure dates should be displayed. If set to 0 (the default), all the flight numbers will be displayed.

Returns

std::string Output string in which the BOM tree is logged/dumped.

Definition at line 400 of file [AIRINV_Service.cpp](#).

Referenced by [AIRINV::AIRINV_Master_Service::list\(\)](#).

24.3.3.12 `bool AIRINV::AIRINV_Service::check (const stdair::AirlineCode_T & iAirlineCode, const stdair::FlightNumber_T & iFlightNumber, const stdair::Date_T & iDepartureDate) const`

Check whether the given flight-date is a valid one.

Parameters

<i>const</i>	stdair::AirlineCode_T& Airline code of the flight to check.
<i>const</i>	stdair::FlightNumber_T& Flight number of the flight to check.
<i>const</i>	stdair::Date_T& Departure date of the flight to check.

Returns

bool Whether or not the given flight date is valid.

Definition at line 424 of file [AIRINV_Service.cpp](#).

Referenced by [AIRINV::AIRINV_Master_Service::check\(\)](#).

24.3.3.13 `std::string AIRINV::AIRINV_Service::csvDisplay () const`

Recursively display (dump in the returned string) the objects of the BOM tree.

Returns

std::string Output string in which the BOM tree is logged/dumped.

Definition at line 448 of file [AIRINV_Service.cpp](#).

Referenced by [AIRINV::AIRINV_Master_Service::csvDisplay\(\)](#).

24.3.3.14 `std::string AIRINV::AIRINV_Service::csvDisplay (const stdair::AirlineCode_T & iAirlineCode, const stdair::FlightNumber_T & iFlightNumber, const stdair::Date_T & iDepartureDate) const`

Recursively display (dump in the returned string) the flight-date corresponding to the parameters given as input.

Parameters

<i>const</i>	stdair::AirlineCode_T& Airline code of the flight to display
<i>const</i>	stdair::FlightNumber_T& Flight number of the flight to display.
<i>const</i>	stdair::Date_T& Departure date of the flight to display.

Returns

std::string Output string in which the BOM tree is logged/dumped.

Definition at line 469 of file [AIRINV_Service.cpp](#).

The documentation for this class was generated from the following files:

- [airinv/AIRINV_Service.hpp](#)
- [airinv/service/AIRINV_Service.cpp](#)

24.4 AIRINV::AIRINV_ServiceContext Class Reference

Class holding the context of the AirInv services.

```
#include <airinv/service/AIRINV_ServiceContext.hpp>
```

Inheritance diagram for AIRINV::AIRINV_ServiceContext:

Friends

- class [AIRINV_Service](#)
- class [FacAirinvServiceContext](#)

24.4.1 Detailed Description

Class holding the context of the AirInv services.

Definition at line 26 of file [AIRINV_ServiceContext.hpp](#).

24.4.2 Friends And Related Function Documentation

24.4.2.1 friend class AIRINV_Service [friend]

The [AIRINV_Service](#) class should be the sole class to get access to ServiceContext content: general users do not want to bother with a context interface.

Definition at line 32 of file [AIRINV_ServiceContext.hpp](#).

24.4.2.2 friend class FacAirinvServiceContext [friend]

Definition at line 33 of file [AIRINV_ServiceContext.hpp](#).

The documentation for this class was generated from the following files:

- [airinv/service/AIRINV_ServiceContext.hpp](#)
- [airinv/service/AIRINV_ServiceContext.cpp](#)

24.5 AIRINV::AirInvServer Class Reference

```
#include <airinv/server/AirInvServer.hpp>
```

Inheritance diagram for AIRINV::AirInvServer:

Public Member Functions

- [AirInvServer](#) (const std::string &address, const std::string &port, const stdair::AirlineCode_T &iAirlineCode, std::size_t thread_pool_size)
- [~AirInvServer](#) ()
- void [run](#) ()
- void [stop](#) ()

24.5.1 Detailed Description

The top-level class of the AirInv server.

Definition at line 23 of file [AirInvServer.hpp](#).

24.5.2 Constructor & Destructor Documentation

24.5.2.1 AIRINV::AirInvServer::AirInvServer (const std::string & address, const std::string & port, const stdair::AirlineCode_T & iAirlineCode, std::size_t thread_pool_size)

Constructor.

Construct the server to listen on the specified TCP address and port, and serve up files from the given directory.

Definition at line 20 of file [AirInvServer_ASIO.cpp](#).

24.5.2.2 AIRINV::AirInvServer::~~AirInvServer ()

Destructor.

Definition at line 46 of file [AirInvServer_ASIO.cpp](#).

24.5.3 Member Function Documentation

24.5.3.1 void AIRINV::AirInvServer::run ()

Run the server's io_service loop.

Definition at line 50 of file [AirInvServer_ASIO.cpp](#).

Referenced by [main\(\)](#).

24.5.3.2 void AIRINV::AirInvServer::stop ()

Stop the server.

Definition at line 69 of file [AirInvServer_ASIO.cpp](#).

The documentation for this class was generated from the following files:

- [airinv/server/AirInvServer.hpp](#)
- [airinv/server/AirInvServer_ASIO.cpp](#)

24.6 AIRINV::BomAbstract Class Reference

```
#include <airinv/bom/BomAbstract.hpp>
```

Public Member Functions

- virtual void [toStream](#) (std::ostream &ioOut) const =0

- virtual void [fromStream](#) (std::istream &ioln)=0

- [BomAbstract](#) ()
- [BomAbstract](#) (const [BomAbstract](#) &)
- virtual [~BomAbstract](#) ()

Friends

- class [FacBomAbstract](#)

24.6.1 Detailed Description

Base class for the Business Object Model (BOM) layer.

Definition at line 14 of file [BomAbstract.hpp](#).

24.6.2 Constructor & Destructor Documentation

24.6.2.1 AIRINV::BomAbstract::BomAbstract () [inline, protected]

Protected Default Constructor to ensure this class is abstract.

Definition at line 40 of file [BomAbstract.hpp](#).

24.6.2.2 AIRINV::BomAbstract::BomAbstract (const BomAbstract &) [inline, protected]

Definition at line 41 of file [BomAbstract.hpp](#).

24.6.2.3 virtual AIRINV::BomAbstract::~~BomAbstract () [inline, protected, virtual]

Destructor.

Definition at line 44 of file [BomAbstract.hpp](#).

24.6.3 Member Function Documentation

24.6.3.1 virtual void AIRINV::BomAbstract::toStream (std::ostream & ioOut) const [pure virtual]

Dump a Business Object into an output stream.

Parameters

<i>ostream&</i>	the output stream.
---------------------	--------------------

24.6.3.2 virtual void AIRINV::BomAbstract::fromStream (std::istream & ioln) [pure virtual]

Read a Business Object from an input stream.

Parameters

<i>istream&</i>	the input stream.
---------------------	-------------------

Referenced by [operator>>\(\)](#).

24.6.3.3 `virtual std::string AIRINV::BomAbstract::toString () const [pure virtual]`

Get the serialised version of the Business Object.

24.6.3.4 `virtual std::string AIRINV::BomAbstract::describeKey () const [pure virtual]`

Get a string describing the whole key (differentiating two objects at any level).

24.6.3.5 `virtual std::string AIRINV::BomAbstract::describeShortKey () const [pure virtual]`

Get a string describing the short key (differentiating two objects at the same level).

24.6.4 Friends And Related Function Documentation

24.6.4.1 `friend class FacBomAbstract [friend]`

Definition at line 15 of file [BomAbstract.hpp](#).

The documentation for this class was generated from the following file:

- [airinv/bom/BomAbstract.hpp](#)

24.7 stdair::BomPropertyTree Struct Reference

```
#include <airinv/server/BomPropertyTree.hpp>
```

Public Member Functions

- void [load](#) (const std::string &iBomTree)
- std::string [save](#) () const

Public Attributes

- stdair::AirlineCode_T [_airlineCode](#)
- stdair::FlightNumber_T [_flightNumber](#)
- stdair::Date_T [_departureDate](#)
- std::set< stdair::AirportCode_T > [_airportCodeList](#)

24.7.1 Detailed Description

Structure representing a list of airports.

Definition at line 19 of file [BomPropertyTree.hpp](#).

24.7.2 Member Function Documentation

24.7.2.1 `void stdair::BomPropertyTree::load (const std::string & iBomTree)`

Update the current BOM tree (*this) with the parsed stream, which is JSON formatted.

Definition at line 17 of file [BomPropertyTree.cpp](#).

References [_airlineCode](#), [_departureDate](#), and [_flightNumber](#).

24.7.2.2 std::string stdair::BomPropertyTree::save () const

Dump the BOM tree (*this) into the stream with a JSON format.

Definition at line 60 of file [BomPropertyTree.cpp](#).

References [_airlineCode](#), [_airportCodeList](#), [_departureDate](#), and [_flightNumber](#).

24.7.3 Member Data Documentation**24.7.3.1 stdair::AirlineCode_T stdair::BomPropertyTree::_airlineCode**

Airline code.

Definition at line 33 of file [BomPropertyTree.hpp](#).

Referenced by [load\(\)](#), and [save\(\)](#).

24.7.3.2 stdair::FlightNumber_T stdair::BomPropertyTree::_flightNumber

Flight number.

Definition at line 36 of file [BomPropertyTree.hpp](#).

Referenced by [load\(\)](#), and [save\(\)](#).

24.7.3.3 stdair::Date_T stdair::BomPropertyTree::_departureDate

Departure date.

Definition at line 39 of file [BomPropertyTree.hpp](#).

Referenced by [load\(\)](#), and [save\(\)](#).

24.7.3.4 std::set<stdair::AirportCode_T> stdair::BomPropertyTree::_airportCodeList

Just to have a list, for now.

Definition at line 42 of file [BomPropertyTree.hpp](#).

Referenced by [save\(\)](#).

The documentation for this struct was generated from the following files:

- [airinv/server/BomPropertyTree.hpp](#)
- [airinv/server/BomPropertyTree.cpp](#)

24.8 AIRINV::BomRootHelper Class Reference

```
#include <airinv/bom/BomRootHelper.hpp>
```

Static Public Member Functions

- static void [fillFromRouting](#) (const stdair::BomRoot &)

24.8.1 Detailed Description

Class representing the actual business functions for an airline bom root.

Definition at line 16 of file [BomRootHelper.hpp](#).

24.8.2 Member Function Documentation

24.8.2.1 void AIRINV::BomRootHelper::fillFromRouting (const stdair::BomRoot & iBomRoot) [static]

Fill the attributes derived from the routing legs (e.g., board and off dates).

Definition at line 16 of file [BomRootHelper.cpp](#).

Referenced by [AIRINV::InventoryManager::createDirectAccesses\(\)](#).

The documentation for this class was generated from the following files:

- [airinv/bom/BomRootHelper.hpp](#)
- [airinv/bom/BomRootHelper.cpp](#)

24.9 AIRINV::BookingClassHelper Class Reference

```
#include <airinv/bom/BookingClassHelper.hpp>
```

24.9.1 Detailed Description

Class representing the actual business functions for an airline booking class.

Definition at line 19 of file [BookingClassHelper.hpp](#).

The documentation for this class was generated from the following file:

- [airinv/bom/BookingClassHelper.hpp](#)

24.10 AIRINV::BookingClassStruct Struct Reference

24.10.1 Detailed Description

Utility Structure for the parsing of BookingClass structures.

Definition at line 24 of file [BookingClassStruct.hpp](#).

24.10.2 Constructor & Destructor Documentation

24.10.2.1 AIRINV::BookingClassStruct::BookingClassStruct ()

Default Constructor.

Definition at line 16 of file [BookingClassStruct.cpp](#).

24.10.3 Member Function Documentation

24.10.3.1 stdair::ClassCode_T AIRINV::BookingClassStruct::getFullSubclassCode () const

Returns the concatenation of the class and subclass codes.

Definition at line 20 of file [BookingClassStruct.cpp](#).

References [_classCode](#), and [_subclassCode](#).

24.10.3.2 void AIRINV::BookingClassStruct::fill (stdair::BookingClass & ioBookingClass) const

Fill the BookingClass objects with the attributes of the [BookingClassStruct](#).

Definition at line 44 of file [BookingClassStruct.cpp](#).

24.10.3.3 const std::string AIRINV::BookingClassStruct::describe () const

Give a description of the structure (for display purposes).

Definition at line 27 of file [BookingClassStruct.cpp](#).

References [_classCode](#), [_cumulatedProtection](#), [_etb](#), [_nbOfBookings](#), [_nbOfGroupBookings](#), [_nbOfPendingGroupBookings](#), [_nbOfStaffBookings](#), [_nbOfWLBookings](#), [_nego](#), [_netClassAvailability](#), [_netRevenueAvailability](#), [_noShowPercentage](#), [_overbookingPercentage](#), [_parentClassCode](#), [_parentSubclassCode](#), [_protection](#), [_segmentAvailability](#), and [_subclassCode](#).

24.13 CmdAbstract Class Reference

Inheritance diagram for CmdAbstract:

The documentation for this class was generated from the following file:

- [airinv/command/InventoryBuilder.hpp](#)

24.14 COMMAND Struct Reference

```
#include <airinv/ui/cmdline/readline_autocomp.hpp>
```

Public Attributes

- `char const * name`
- `pt2Func * func`
- `char * doc`

24.14.1 Detailed Description

A structure which contains information on the commands this program can understand.

Definition at line 41 of file [readline_autocomp.hpp](#).

24.14.2 Member Data Documentation

24.14.2.1 `char const* COMMAND::name`

User printable name of the function.

Definition at line 45 of file [readline_autocomp.hpp](#).

Referenced by [com_help\(\)](#), and [find_command\(\)](#).

24.14.2.2 pt2Func* COMMAND::func

Function to call to do the job.

Definition at line 50 of file [readline_autocomp.hpp](#).

Referenced by [execute_line\(\)](#).

24.14.2.3 char* COMMAND::doc

Documentation for this function.

Definition at line 55 of file [readline_autocomp.hpp](#).

The documentation for this struct was generated from the following file:

- [airinv/ui/cmdline/readline_autocomp.hpp](#)

24.15 AIRINV::Connection Class Reference

```
#include <airinv/server/Connection.hpp>
```

Inheritance diagram for AIRINV::Connection:

Public Member Functions

- [Connection](#) (boost::asio::io_service &, [RequestHandler](#) &)
- boost::asio::ip::tcp::socket & [socket](#) ()
- void [start](#) ()

24.15.1 Detailed Description

Represents a single connection from a client.

Definition at line 25 of file [Connection.hpp](#).

24.15.2 Constructor & Destructor Documentation

24.15.2.1 AIRINV::Connection::Connection (boost::asio::io_service & ioService, RequestHandler & ioHandler)

Constructor.

Construct a connection with the given io_service.

Definition at line 16 of file [Connection.cpp](#).

24.15.3 Member Function Documentation

24.15.3.1 boost::asio::ip::tcp::socket & AIRINV::Connection::socket ()

Get the socket associated with the connection.

Definition at line 22 of file [Connection.cpp](#).

24.15.3.2 void AIRINV::Connection::start ()

Start the first asynchronous operation for the connection.

Definition at line 27 of file [Connection.cpp](#).

The documentation for this class was generated from the following files:

- [airinv/server/Connection.hpp](#)
- [airinv/server/Connection.cpp](#)

24.16 AIRINV::DCPEventGenerator Class Reference

24.17.1 Detailed Description

Utility Structure for the parsing of Flight-Period structures.

Definition at line 21 of file [DCPEventStruct.hpp](#).

24.17.2 Constructor & Destructor Documentation

24.17.2.1 AIRINV::DCPEventStruct::DCPEventStruct ()

Default constructor.

Definition at line 18 of file [DCPEventStruct.cpp](#).

24.17.3 Member Function Documentation

24.17.3.1 stdair::Date_T AIRINV::DCPEventStruct::getDate () const

Get the date from the staging details.

Definition at line 38 of file [DCPEventStruct.cpp](#).

References [_itDay](#), [_itMonth](#), and [_itYear](#).

24.17.3.2 stdair::Duration_T AIRINV::DCPEventStruct::getTime () const

Get the time from the staging details.

Definition at line 44 of file [DCPEventStruct.cpp](#).

References [_itHours](#), [_itMinutes](#), and [_itSeconds](#).

24.17.3.3 const std::string AIRINV::DCPEventStruct::describe () const

Display of the structure.

Definition at line 53 of file [DCPEventStruct.cpp](#).

References [_advancePurchase](#), [_airlineCodeList](#), [_cabinCode](#), [_changeFees](#), [_channel](#), [_classCodeList](#), [_dateRangeEnd](#), [_dateRangeStart](#), [_DCP](#), [_destination](#), [_minimumStay](#), [_nonRefundable](#), [_origin](#), [_pos](#), [_saturdayStay](#), [_timeRangeEnd](#), and [_timeRangeStart](#).

24.17.3.4 const unsigned int AIRINV::DCPEventStruct::getAirlineListSize () const [inline]

Get the size of the airline code list.

Definition at line 37 of file [DCPEventStruct.hpp](#).

References [_airlineCodeList](#).

24.17.3.5 const unsigned int AIRINV::DCPEventStruct::getClassCodeListSize () const [inline]

Get the size of the class code list.

Definition at line 42 of file [DCPEventStruct.hpp](#).

References [_classCodeList](#).

24.17.3.6 const stdair::AirlineCode_T & AIRINV::DCPEventStruct::getFirstAirlineCode () const

Get the first airline code.

Definition at line 87 of file [DCPEventStruct.cpp](#).

References [_airlineCodeList](#).

24.17.3.7 void AIRINV::DCPEventStruct::beginAirline ()

Initialise the internal iterators on airline code: The current iterator is set on the first airline code, the next iterator is set on the second one.

Definition at line 95 of file [DCPEventStruct.cpp](#).

References [_airlineCodeList](#), and [_itCurrentAirlineCode](#).

24.17.3.8 bool AIRINV::DCPEventStruct::hasNotReachedEndAirline () const

States whether or not the end of the (airline code) list has been reached.

Definition at line 100 of file [DCPEventStruct.cpp](#).

References [_airlineCodeList](#), and [_itCurrentAirlineCode](#).

24.17.3.9 stdair::AirlineCode_T AIRINV::DCPEventStruct::getCurrentAirlineCode () const

Get the current element (airline code).

Definition at line 106 of file [DCPEventStruct.cpp](#).

References [_airlineCodeList](#), and [_itCurrentAirlineCode](#).

24.17.3.10 void AIRINV::DCPEventStruct::iterateAirline ()

Iterate for one element (airline code): increment both internal iterators on Buckets.

Definition at line 112 of file [DCPEventStruct.cpp](#).

References [_classCodeList](#), and [_itCurrentAirlineCode](#).

24.17.3.11 const std::string & AIRINV::DCPEventStruct::getFirstClassCode () const

Get the first class code list as a string.

Definition at line 119 of file [DCPEventStruct.cpp](#).

References [_classCodeList](#).

24.17.3.12 void AIRINV::DCPEventStruct::beginClassCode ()

Initialise the internal iterators on class code: The current iterator is set on the first class code, the next iterator is set on the second one.

Definition at line 127 of file [DCPEventStruct.cpp](#).

References [_classCodeList](#), and [_itCurrentClassCode](#).

24.17.3.13 bool AIRINV::DCPEventStruct::hasNotReachedEndClassCode () const

States whether or not the end of the (class code) list has been reached.

Definition at line 132 of file [DCPEventStruct.cpp](#).

References [_classCodeList](#), and [_itCurrentClassCode](#).

24.17.3.14 std::string AIRINV::DCPEventStruct::getCurrentClassCode () const

Get the current element (class code).

Definition at line 138 of file [DCPEventStruct.cpp](#).

References [_classCodeList](#), and [_itCurrentClassCode](#).

24.17.3.15 void AIRINV::DCPEventStruct::iterateClassCode ()

Iterate for one element (classCode): increment both internal iterators on Buckets.

Definition at line 145 of file [DCPEventStruct.cpp](#).

References [_classCodeList](#), and [_itCurrentClassCode](#).

24.17.4 Member Data Documentation

24.17.4.1 stdair::year_t AIRINV::DCPEventStruct::_itYear

Staging Date.

Definition at line 87 of file [DCPEventStruct.hpp](#).

Referenced by [getDate\(\)](#).

24.17.4.2 stdair::month_t AIRINV::DCPEventStruct::_itMonth

Definition at line 88 of file [DCPEventStruct.hpp](#).

Referenced by [getDate\(\)](#).

24.17.4.3 stdair::day_t AIRINV::DCPEventStruct::_itDay

Definition at line 89 of file [DCPEventStruct.hpp](#).

Referenced by [getDate\(\)](#).

24.17.4.4 stdair::hour_t AIRINV::DCPEventStruct::_itHours

Staging Time.

Definition at line 93 of file [DCPEventStruct.hpp](#).

Referenced by [getTime\(\)](#).

24.17.4.5 stdair::minute_t AIRINV::DCPEventStruct::_itMinutes

Definition at line 94 of file [DCPEventStruct.hpp](#).

Referenced by [getTime\(\)](#).

24.17.4.6 stdair::second_t AIRINV::DCPEventStruct::_itSeconds

Definition at line 95 of file [DCPEventStruct.hpp](#).

Referenced by [getTime\(\)](#).

24.17.4.7 stdair::AirlineCodeList_T::iterator AIRINV::DCPEventStruct::_itCurrentAirlineCode

Iterator for the current airline code list.

Definition at line 98 of file [DCPEventStruct.hpp](#).

Referenced by [beginAirline\(\)](#), [getCurrentAirlineCode\(\)](#), [hasNotReachedEndAirline\(\)](#), and [iterateAirline\(\)](#).

24.17.4.8 stdair::ClassList_StringList_T::iterator AIRINV::DCPEventStruct::_itCurrentClassCode

Iterator for the current class code.

Definition at line 101 of file [DCPEventStruct.hpp](#).

Referenced by [beginClassCode\(\)](#), [getCurrentClassCode\(\)](#), [hasNotReachedEndClassCode\(\)](#), and [iterateClassCode\(\)](#).

24.17.4.9 stdair::AirportCode_T AIRINV::DCPEventStruct::_origin

Origin.

Definition at line 104 of file [DCPEventStruct.hpp](#).

Referenced by [describe\(\)](#).

24.17.4.10 stdair::AirportCode_T AIRINV::DCPEventStruct::_destination

Destination.

Definition at line 107 of file [DCPEventStruct.hpp](#).

Referenced by [describe\(\)](#).

24.17.4.11 stdair::Date_T AIRINV::DCPEventStruct::_dateRangeStart

Start Range date available for this DCP event.

Definition at line 110 of file [DCPEventStruct.hpp](#).

Referenced by [describe\(\)](#).

24.17.4.12 stdair::Date_T AIRINV::DCPEventStruct::_dateRangeEnd

Start Range date available for this DCP event.

Definition at line 113 of file [DCPEventStruct.hpp](#).

Referenced by [describe\(\)](#).

24.17.4.13 stdair::Duration_T AIRINV::DCPEventStruct::_timeRangeStart

Start time from the time range available for this DCP event.

Definition at line 116 of file [DCPEventStruct.hpp](#).

Referenced by [describe\(\)](#).

24.17.4.14 stdair::Duration_T AIRINV::DCPEventStruct::_timeRangeEnd

End time from the time range available for this DCP event.

Definition at line 119 of file [DCPEventStruct.hpp](#).

Referenced by [describe\(\)](#).

24.17.4.15 stdair::CabinCode_T AIRINV::DCPEventStruct::_cabinCode

Cabin code.

Definition at line 122 of file [DCPEventStruct.hpp](#).

Referenced by [describe\(\)](#).

24.17.4.16 stdair::CityCode_T AIRINV::DCPEventStruct::_pos

Point-of-sale.

Definition at line 125 of file [DCPEventStruct.hpp](#).

Referenced by [describe\(\)](#).

24.17.4.17 stdair::ChannelLabel_T AIRINV::DCPEventStruct::_channel

Channel distribution.

Definition at line 128 of file [DCPEventStruct.hpp](#).

Referenced by [describe\(\)](#).

24.17.4.18 stdair::DayDuration_T AIRINV::DCPEventStruct::_advancePurchase

Number of days that the ticket is sold before the flightDate.

Definition at line 131 of file [DCPEventStruct.hpp](#).

Referenced by [describe\(\)](#).

24.17.4.19 stdair::SaturdayStay_T AIRINV::DCPEventStruct::_saturdayStay

Boolean saying whether a saturday is considered during the stay .

Definition at line 134 of file [DCPEventStruct.hpp](#).

Referenced by [describe\(\)](#).

24.17.4.20 stdair::ChangeFees_T AIRINV::DCPEventStruct::_changeFees

Boolean saying whether the change fees option is requested or not.

Definition at line 137 of file [DCPEventStruct.hpp](#).

Referenced by [describe\(\)](#).

24.17.4.21 stdair::NonRefundable_T AIRINV::DCPEventStruct::_nonRefundable

Boolean saying whether the refundable option is requested or not.

Definition at line 140 of file [DCPEventStruct.hpp](#).

Referenced by [describe\(\)](#).

24.17.4.22 stdair::DayDuration_T AIRINV::DCPEventStruct::_minimumStay

Number of days that the customer spent into the destination city.

Definition at line 143 of file [DCPEventStruct.hpp](#).

Referenced by [describe\(\)](#).

24.17.4.23 stdair::PriceValue_T AIRINV::DCPEventStruct::_DCP

Price.

Definition at line 146 of file [DCPEventStruct.hpp](#).

Referenced by [describe\(\)](#).

24.17.4.24 stdair::AirlineCode_T AIRINV::DCPEventStruct::_airlineCode

Airline code

Definition at line 149 of file [DCPEventStruct.hpp](#).

24.17.4.25 stdair::ClassCode_T AIRINV::DCPEventStruct::_classCode

Code

Definition at line 152 of file [DCPEventStruct.hpp](#).

24.17.4.26 stdair::AirlineCodeList_T AIRINV::DCPEventStruct::_airlineCodeList

Airline Code List

Definition at line 155 of file [DCPEventStruct.hpp](#).

Referenced by [beginAirline\(\)](#), [describe\(\)](#), [getAirlineListSize\(\)](#), [getCurrentAirlineCode\(\)](#), [getFirstAirlineCode\(\)](#), and [hasNotReachedEndAirline\(\)](#).

24.17.4.27 stdair::ClassList_StringList_T AIRINV::DCPEventStruct::_classCodeList

Numbers of different Airline Codes Class Code List

Definition at line 161 of file [DCPEventStruct.hpp](#).

Referenced by [beginClassCode\(\)](#), [describe\(\)](#), [getClassCodeListSize\(\)](#), [getCurrentClassCode\(\)](#), [getFirstClassCode\(\)](#), [hasNotReachedEndClassCode\(\)](#), [iterateAirline\(\)](#), and [iterateClassCode\(\)](#).

#include <airinv/command/vault/DCPParser.hpp>
```

Inheritance diagram for AIRINV::DCPParser:

Static Public Member Functions

- static void [DCPRuleGeneration](#) (const stdair::Filename_T &, stdair::BomRoot &)

24.18.1 Detailed Description

Class wrapping the parser entry point.

Definition at line 19 of file [DCPParser.hpp](#).

24.18.2 Member Function Documentation

24.18.2.1 void AIRINV::DCPParser::DCPRuleGeneration (const stdair::Filename_T & iFilename, stdair::BomRoot & ioBomRoot) [static]

Parses the CSV file describing the DCPs for the simulator, and generates the event structures accordingly.

Parameters

<i>const</i>	stdair::Filename_T& The file-name of the CSV-formatted DCP input file.
<i>stdair::Bom-Root&</i>	Root of the BOM tree.

Definition at line 16 of file [DCPParser.cpp](#).

References [AIRINV::DCPRuleFileParser::generateDCPRules\(\)](#).

The documentation for this class was generated from the following files:

Public Member Functions

- [DCPRuleFileParser](#) (stdair::BomRoot &ioBomRoot, const stdair::Filename_T &iFilename)
- bool [generateDCPRules](#) ()

24.19.1 Detailed Description

Class wrapping the initialisation and entry point of the parser.

The seemingly redundancy is used to force the instantiation of the actual parser, which is a templatised Boost Spirit grammar. Hence, the actual parser is instantiated within that class object code.

Definition at line 337 of file [DCPParserHelper.hpp](#).

24.19.2 Constructor & Destructor Documentation

24.19.2.1 [AIRINV::DCPRuleFileParser::DCPRuleFileParser](#) (stdair::BomRoot & *ioBomRoot*, const stdair::Filename_T & *iFilename*)

Constructor.

Definition at line 572 of file [DCPParserHelper.cpp](#).

24.19.3 Member Function Documentation

24.19.3.1 bool [AIRINV::DCPRuleFileParser::generateDCPRules](#) ()

Parse the input file and generate the Inventories.

Definition at line 593 of file [DCPParserHelper.cpp](#).

Referenced by [AIRINV::DCPParser::DCPRuleGeneration\(\)](#).

The documentation for this class was generated from the following files:

- [FacSupervisor](#) (const [FacSupervisor](#) &)

24.33.1 Detailed Description

Singleton class to register and clean all Factories.

Definition at line 17 of file [FacSupervisor.hpp](#).

24.33.2 Member Typedef Documentation

24.33.2.1 typedef std::vector<[FacBomAbstract](#)*> AIRINV::FacSupervisor::BomFactoryPool_T

Define the pool (list) of factories.

Definition at line 21 of file [FacSupervisor.hpp](#).

24.33.2.2 `typedef std::vector<FacServiceAbstract*> AIRINV::FacSupervisor::ServiceFactoryPool_T`

Definition at line 22 of file [FacSupervisor.hpp](#).

24.33.3 Constructor & Destructor Documentation

24.33.3.1 `AIRINV::FacSupervisor::~~FacSupervisor ()`

Destructor

The static instance is deleted (and reset to NULL) by the static [cleanFactory\(\)](#) method.

Definition at line 41 of file [FacSupervisor.cpp](#).

References [cleanBomLayer\(\)](#), and [cleanServiceLayer\(\)](#).

24.33.3.2 `AIRINV::FacSupervisor::FacSupervisor ()` `[protected]`

Default Constructor.

This constructor is protected to ensure the singleton pattern.

Definition at line 16 of file [FacSupervisor.cpp](#).

Referenced by [instance\(\)](#).

24.33.3.3 `AIRINV::FacSupervisor::FacSupervisor (const FacSupervisor &)` `[inline, protected]`

Definition at line 66 of file [FacSupervisor.hpp](#).

24.33.4 Member Function Documentation

24.33.4.1 `FacSupervisor & AIRINV::FacSupervisor::instance ()` `[static]`

Provides the unique instance.

The singleton is instantiated when first used.

Returns

[FacSupervisor&](#)

Definition at line 20 of file [FacSupervisor.cpp](#).

References [FacSupervisor\(\)](#).

24.33.4.2 `void AIRINV::FacSupervisor::registerBomFactory (FacBomAbstract * ioFacBomAbstract_ptr)`

Register a newly instantiated concrete factory for the Bom layer.

When a concrete Factory is firstly instantiated this factory have to register itself to the [FacSupervisor](#)

Parameters

<i>FacAbstract&</i>	the concrete Factory to register.
-------------------------	-----------------------------------

Definition at line 30 of file [FacSupervisor.cpp](#).

24.33.4.3 `void AIRINV::FacSupervisor::registerServiceFactory (FacServiceAbstract * ioFacServiceAbstract_ptr)`

Register a newly instantiated concrete factory for the Service layer.

When a concrete Factory is firstly instantiated this factory have to register itself to the [FacSupervisor](#).

Parameters

<i>FacService-Abstract</i> &	the concrete Factory to register.
------------------------------	-----------------------------------

Definition at line 36 of file [FacSupervisor.cpp](#).

24.33.4.4 void AIRINV::FacSupervisor::cleanBomLayer ()

Clean all created object.

Call the clean method of all the instantiated factories for the Bom layer.

Definition at line 47 of file [FacSupervisor.cpp](#).

Referenced by [cleanFactory\(\)](#), and [~FacSupervisor\(\)](#).

24.33.4.5 void AIRINV::FacSupervisor::cleanServiceLayer ()

Clean all Service created object.

Call the clean method of all the instantiated factories for the Service layer.

Definition at line 61 of file [FacSupervisor.cpp](#).

Referenced by [cleanFactory\(\)](#), and [~FacSupervisor\(\)](#).

24.33.4.6 void AIRINV::FacSupervisor::cleanFactory () [static]

Clean the static instance.

The singleton is deleted.

Definition at line 75 of file [FacSupervisor.cpp](#).

References [cleanBomLayer\(\)](#), and [cleanServiceLayer\(\)](#).

The documentation for this class was generated from the following files:

24.38.1 Detailed Description

Utility Structure for the parsing of Flight-Date structures.

Definition at line 27 of file [FlightDateStruct.hpp](#).

24.38.2 Constructor & Destructor Documentation

24.38.2.1 AIRINV::FlightDateStruct::FlightDateStruct ()

Constructor.

Definition at line 17 of file [FlightDateStruct.cpp](#).

24.38.3 Member Function Documentation

24.38.3.1 stdair::Date_T AIRINV::FlightDateStruct::getDate () const

Set the date from the staging details.

Definition at line 25 of file [FlightDateStruct.cpp](#).

References [_itDay](#), [_itMonth](#), and [_itYear](#).

Referenced by [AIRINV::InventoryParserHelper::storeSnapshotDate::operator\(\)](#), [AIRINV::InventoryParserHelper::storeFlightDate::operator\(\)](#), [AIRINV::InventoryParserHelper::storeBoardingDate::operator\(\)](#), and [AIRINV::InventoryParserHelper::storeOffDate::operator\(\)](#).

24.38.3.2 stdair::Duration_T AIRINV::FlightDateStruct::getTime () const

Set the time from the staging details.

Definition at line 30 of file [FlightDateStruct.cpp](#).

References [_itHours](#), [_itMinutes](#), and [_itSeconds](#).

Referenced by [AIRINV::InventoryParserHelper::storeBoardingTime::operator\(\)](#), and [AIRINV::InventoryParserHelper::storeOffTime::operator\(\)](#).

24.38.3.3 const std::string AIRINV::FlightDateStruct::describe () const

Give a description of the structure (for display purposes).

Definition at line 37 of file [FlightDateStruct.cpp](#).

References [_airlineCode](#), [_flightDate](#), [_flightNumber](#), [_flightTypeCode](#), [_flightVisibilityCode](#), [_legList](#), [_segmentList](#), [AIRINV::SegmentStruct::describe\(\)](#), [AIRINV::LegStruct::describe\(\)](#), [AIRINV::FlightVisibilityCode::getCode\(\)](#), and [AIRINV::FlightVisibilityCode::NORMAL](#).

24.38.3.4 void AIRINV::FlightDateStruct::addAirport (const stdair::AirportCode_T & iAirport)

Add the given airport to the internal lists (if not already existing).

Definition at line 67 of file [FlightDateStruct.cpp](#).

References [_airportList](#), and [_airportOrderedList](#).

Referenced by [AIRINV::InventoryParserHelper::storeLegBoardingPoint::operator\(\)](#), and [AIRINV::InventoryParserHelper::storeLegOffPoint::operator\(\)](#).

24.38.3.5 void AIRINV::FlightDateStruct::buildSegments ()

Build the list of [SegmentStruct](#) objects.

Definition at line 83 of file [FlightDateStruct.cpp](#).

References [_airportList](#), [_airportOrderedList](#), [AIRINV::SegmentStruct::_boardingPoint](#), [AIRINV::SegmentStruct::_offPoint](#), and [_segmentList](#).

24.38.3.6 void AIRINV::FlightDateStruct::addSegmentCabin (const SegmentStruct & iSegment, const SegmentCabinStruct & iCabin)

Add, to the Segment structure whose key corresponds to the given (board point, off point) pair, the specific segment cabin details (mainly, the list of the class codes).

Note that the Segment structure is retrieved from the internal list, already filled by a previous step (the [buildSegments\(\)](#) method).

Definition at line 116 of file [FlightDateStruct.cpp](#).

References [AIRINV::SegmentStruct::_boardingPoint](#), [AIRINV::SegmentStruct::_cabinList](#), [AIRINV::SegmentStruct::_offPoint](#), and [_segmentList](#).

24.38.3.7 void AIRINV::FlightDateStruct::addSegmentCabin (const SegmentCabinStruct & iCabin)

Add, to all the Segment structures, the general segment cabin details (mainly, the list of the class codes).

Note that the Segment structures are stored within the internal list, already filled by a previous step (the [buildSegments\(\)](#) method).

Definition at line 153 of file [FlightDateStruct.cpp](#).

References [AIRINV::SegmentStruct::_cabinList](#), and [_segmentList](#).

24.38.3.8 void AIRINV::FlightDateStruct::addFareFamily (const SegmentStruct & iSegment, const SegmentCabinStruct & iCabin, const FareFamilyStruct & iFareFamily)

Add, to the SegmentCabin structure whose key corresponds to the given cabin code, the specific segment fare family details (mainly, the list of the class codes).

Note that the SegmentCabin structure is retrieved from the internal list, already filled by a previous step (the [buildSegmentCabins\(\)](#) method).

Definition at line 167 of file [FlightDateStruct.cpp](#).

References [AIRINV::SegmentStruct::_boardingPoint](#), [AIRINV::SegmentCabinStruct::_cabinCode](#), [AIRINV::SegmentStruct::_cabinList](#), [AIRINV::SegmentCabinStruct::_fareFamilies](#), [AIRINV::SegmentStruct::_offPoint](#), and [_segmentList](#).

24.38.3.9 void AIRINV::FlightDateStruct::addFareFamily (const SegmentCabinStruct & iCabin, const FareFamilyStruct & iFareFamily)

Add, to all the Segment structures, the general fare family sets (list of fare families).

Note that the SegmentCabin structures are stored within the internal list, already filled by a previous step (the [buildSegmentCabins\(\)](#) method).

Definition at line 231 of file [FlightDateStruct.cpp](#).

References [AIRINV::SegmentCabinStruct::_cabinCode](#), [AIRINV::SegmentStruct::_cabinList](#), [AIRINV::SegmentCabinStruct::_fareFamilies](#), and [_segmentList](#).

24.39 AIRINV::FlightPeriodFileParser Class Reference

```
#include <airinv/command/ScheduleParserHelper.hpp>
```

Inheritance diagram for AIRINV::FlightPeriodFileParser:

Public Member Functions

- [FlightPeriodFileParser](#) (stdair::BomRoot &ioBomRoot, const stdair::Filename_T &iFilename)
- bool [generateInventories](#) ()

24.39.1 Detailed Description

Short Description

Detailed Description. Class wrapping the initialisation and entry point of the parser.

The seemingly redundancy is used to force the instantiation of the actual parser, which is a templatised Boost Spirit grammar. Hence, the actual parser is instantiated within that class object code.

Definition at line 292 of file [ScheduleParserHelper.hpp](#).

24.39.2 Constructor & Destructor Documentation

24.39.2.1 AIRINV::FlightPeriodFileParser::FlightPeriodFileParser (stdair::BomRoot & ioBomRoot, const stdair::Filename_T & iFilename)

Constructor.

Definition at line 631 of file [ScheduleParserHelper.cpp](#).

24.39.3 Member Function Documentation

24.39.3.1 bool AIRINV::FlightPeriodFileParser::generateInventories ()

Parse the input file and generate the Inventories.

Definition at line 655 of file [ScheduleParserHelper.cpp](#).

Referenced by [AIRINV::ScheduleParser::generateInventories\(\)](#).

The documentation for this class was generated from the following files:

- [airinv/command/ScheduleParserHelper.hpp](#)
- [airinv/command/ScheduleParserHelper.cpp](#)

24.41.1 Detailed Description

Utility Structure for the parsing of Flight-Period structures.

Definition at line 24 of file [FlightPeriodStruct.hpp](#).

24.41.2 Constructor & Destructor Documentation

24.41.2.1 AIRINV::FlightPeriodStruct::FlightPeriodStruct ()

Constructor.

Definition at line 17 of file [FlightPeriodStruct.cpp](#).

24.41.3 Member Function Documentation

24.41.3.1 stdair::Date_T AIRINV::FlightPeriodStruct::getDate () const

Set the date from the staging details.

Definition at line 24 of file [FlightPeriodStruct.cpp](#).

References [_itDay](#), [_itMonth](#), and [_itYear](#).

Referenced by [AIRINV::ScheduleParserHelper::storeDateRangeStart::operator\(\)](#), and [AIRINV::ScheduleParserHelper::storeDateRangeEnd::operator\(\)](#).

24.41.3.2 stdair::Duration_T AIRINV::FlightPeriodStruct::getTime () const

Set the time from the staging details.

Definition at line 29 of file [FlightPeriodStruct.cpp](#).

References [_itHours](#), [_itMinutes](#), and [_itSeconds](#).

Referenced by [AIRINV::ScheduleParserHelper::storeBoardingTime::operator\(\)](#), [AIRINV::ScheduleParserHelper::storeOffTime::operator\(\)](#), and [AIRINV::ScheduleParserHelper::storeElapsedTime::operator\(\)](#).

24.41.3.3 const std::string AIRINV::FlightPeriodStruct::describe () const

Give a description of the structure (for display purposes).

Definition at line 36 of file [FlightPeriodStruct.cpp](#).

References [_airlineCode](#), [_dateRange](#), [_dow](#), [_flightNumber](#), [_legList](#), [_segmentList](#), [AIRINV::SegmentStruct::describe\(\)](#), and [AIRINV::LegStruct::describe\(\)](#).

Referenced by [AIRINV::ScheduleParserHelper::doEndFlight::operator\(\)](#).

24.41.3.4 void AIRINV::FlightPeriodStruct::addAirport (const stdair::AirportCode_T & iAirport)

Add the given airport to the internal lists (if not already existing).

Definition at line 62 of file [FlightPeriodStruct.cpp](#).

References [_airportList](#), and [_airportOrderedList](#).

Referenced by [AIRINV::ScheduleParserHelper::storeLegBoardingPoint::operator\(\)\(\)](#), and [AIRINV::ScheduleParserHelper::storeLegOffPoint::operator\(\)\(\)](#).

24.41.3.5 void AIRINV::FlightPeriodStruct::buildSegments ()

Build the list of [SegmentStruct](#) objects.

Definition at line 78 of file [FlightPeriodStruct.cpp](#).

References [_airportList](#), [_airportOrderedList](#), [AIRINV::SegmentStruct::_boardingPoint](#), [AIRINV::SegmentStruct::_offPoint](#), and [_segmentList](#).

Referenced by [AIRINV::ScheduleParserHelper::storeSegmentSpecificity::operator\(\)\(\)](#).

24.41.3.6 void AIRINV::FlightPeriodStruct::addSegmentCabin (const SegmentStruct & iSegment, const SegmentCabinStruct & iCabin)

Add, to the Segment structure whose key corresponds to the given (board point, off point) pair, the specific segment cabin details (mainly, the list of the class codes).

Note that the Segment structure is retrieved from the internal list, already filled by a previous step (the [buildSegments\(\)](#) method).

Definition at line 111 of file [FlightPeriodStruct.cpp](#).

References [AIRINV::SegmentStruct::_boardingPoint](#), [AIRINV::SegmentStruct::_cabinList](#), [AIRINV::SegmentStruct::_offPoint](#), and [_segmentList](#).

Referenced by [AIRINV::ScheduleParserHelper::storeClasses::operator\(\)\(\)](#).

24.41.3.7 void AIRINV::FlightPeriodStruct::addSegmentCabin (const SegmentCabinStruct & iCabin)

Add, to all the Segment structures, the general segment cabin details (mainly, the list of the class codes).

Note that the Segment structures are stored within the internal list, already filled by a previous step (the [buildSegments\(\)](#) method).

Definition at line 148 of file [FlightPeriodStruct.cpp](#).

References [AIRINV::SegmentStruct::_cabinList](#), and [_segmentList](#).

24.41.3.8 void AIRINV::FlightPeriodStruct::addFareFamily (const SegmentStruct & iSegment, const SegmentCabinStruct & iCabin, const FareFamilyStruct & iFareFamily)

Add, to the SegmentCabin structure whose key corresponds to the given cabin code, the specific segment fare family details (mainly, the list of the class codes).

Note that the SegmentCabin structure is retrieved from the internal list, already filled by a previous step (the [buildSegmentCabins\(\)](#) method).

Definition at line 161 of file [FlightPeriodStruct.cpp](#).

References [AIRINV::SegmentStruct::_boardingPoint](#), [AIRINV::SegmentCabinStruct::_cabinCode](#), [AIRINV::SegmentStruct::_cabinList](#), [AIRINV::SegmentCabinStruct::_fareFamilies](#), [AIRINV::SegmentStruct::_offPoint](#), and [_segmentList](#).

Referenced by [AIRINV::ScheduleParserHelper::storeFClasses::operator\(\)\(\)](#).

24.41.3.9 void AIRINV::FlightPeriodStruct::addFareFamily (const SegmentCabinStruct & iCabin, const FareFamilyStruct & iFareFamily)

Add, to all the Segment structures, the general fare family sets (list of fare families).

Note that the SegmentCabin structures are stored within the internal list, already filled by a previous step (the [buildSegmentCabins\(\)](#) method).

Definition at line 225 of file [FlightPeriodStruct.cpp](#).

References [AIRINV::SegmentCabinStruct::_cabinCode](#), [AIRINV::SegmentStruct::_cabinList](#), [AIRINV::Segment-](#)

[CabinStruct::_fareFamilies](#), and [_segmentList](#).

24.41.4 Member Data Documentation

24.41.4.1 stdair::AirlineCode_T AIRINV::FlightPeriodStruct::_airlineCode

Definition at line 80 of file [FlightPeriodStruct.hpp](#).

Referenced by [describe\(\)](#), and [AIRINV::ScheduleParserHelper::storeAirlineCode::operator\(\)](#).

24.41.4.2 stdair::FlightNumber_T AIRINV::FlightPeriodStruct::_flightNumber

Definition at line 81 of file [FlightPeriodStruct.hpp](#).

Referenced by [describe\(\)](#), and [AIRINV::ScheduleParserHelper::storeFlightNumber::operator\(\)](#).

24.41.4.3 stdair::DatePeriod_T AIRINV::FlightPeriodStruct::_dateRange

Definition at line 82 of file [FlightPeriodStruct.hpp](#).

Referenced by [describe\(\)](#), and [AIRINV::ScheduleParserHelper::storeDateRangeEnd::operator\(\)](#).

24.41.4.4 stdair::DoWStruct AIRINV::FlightPeriodStruct::_dow

Definition at line 83 of file [FlightPeriodStruct.hpp](#).

Referenced by [describe\(\)](#), and [AIRINV::ScheduleParserHelper::storeDow::operator\(\)](#).

24.41.4.5 LegStructList_T AIRINV::FlightPeriodStruct::_legList

Definition at line 84 of file [FlightPeriodStruct.hpp](#).

Referenced by [describe\(\)](#), [AIRINV::ScheduleParserHelper::storeAirlineCode::operator\(\)](#), [AIRINV::ScheduleParserHelper::storeLegBoardingPoint::operator\(\)](#), and [AIRINV::ScheduleParserHelper::doEndFlight::operator\(\)](#).

24.41.4.6 SegmentStructList_T AIRINV::FlightPeriodStruct::_segmentList

Definition at line 85 of file [FlightPeriodStruct.hpp](#).

Referenced by [addFareFamily\(\)](#), [addSegmentCabin\(\)](#), [buildSegments\(\)](#), and [describe\(\)](#).

24.41.4.7 bool AIRINV::FlightPeriodStruct::_legAlreadyDefined

Staging Leg (resp. Cabin) structure, gathering the result of the iteration on one leg (resp. cabin).

Definition at line 89 of file [FlightPeriodStruct.hpp](#).

Referenced by [AIRINV::ScheduleParserHelper::storeLegBoardingPoint::operator\(\)](#), and [AIRINV::ScheduleParserHelper::doEndFlight::operator\(\)](#).

24.41.4.8 LegStruct AIRINV::FlightPeriodStruct::_itLeg

Definition at line 90 of file [FlightPeriodStruct.hpp](#).

Referenced by [AIRINV::ScheduleParserHelper::storeLegBoardingPoint::operator\(\)](#), [AIRINV::ScheduleParserHelper::storeLegOffPoint::operator\(\)](#), [AIRINV::ScheduleParserHelper::storeBoardingTime::operator\(\)](#), [AIRINV::ScheduleParserHelper::storeOffTime::operator\(\)](#), [AIRINV::ScheduleParserHelper::storeElapsedTime::operator\(\)](#), [AIRINV::ScheduleParserHelper::storeCapacity::operator\(\)](#), and [AIRINV::ScheduleParserHelper::doEndFlight::operator\(\)](#).

24.41.4.9 LegCabinStruct AIRINV::FlightPeriodStruct::_itLegCabin

Definition at line 91 of file [FlightPeriodStruct.hpp](#).

Referenced by [AIRINV::ScheduleParserHelper::storeLegCabinCode::operator\(\)](#), and [AIRINV::ScheduleParser-](#)

[Helper::storeCapacity::operator\(\)](#).

24.41.4.10 `std::date::Date_T AIRINV::FlightPeriodStruct::_dateRangeStart`

Staging Date.

Definition at line 94 of file [FlightPeriodStruct.hpp](#).

Referenced by [AIRINV::ScheduleParserHelper::storeDateRangeStart::operator\(\)](#), and [AIRINV::ScheduleParserHelper::storeDateRangeEnd::operator\(\)](#).

24.41.4.11 `std::date::Date_T AIRINV::FlightPeriodStruct::_dateRangeEnd`

Definition at line 95 of file [FlightPeriodStruct.hpp](#).

Referenced by [AIRINV::ScheduleParserHelper::storeDateRangeEnd::operator\(\)](#).

24.41.4.12 `unsigned int AIRINV::FlightPeriodStruct::_itYear`

Definition at line 96 of file [FlightPeriodStruct.hpp](#).

Referenced by [getDate\(\)](#).

24.41.4.13 `unsigned int AIRINV::FlightPeriodStruct::_itMonth`

Definition at line 97 of file [FlightPeriodStruct.hpp](#).

Referenced by [getDate\(\)](#).

24.41.4.14 `unsigned int AIRINV::FlightPeriodStruct::_itDay`

Definition at line 98 of file [FlightPeriodStruct.hpp](#).

Referenced by [getDate\(\)](#).

24.41.4.15 `int AIRINV::FlightPeriodStruct::_dateOffset`

Definition at line 99 of file [FlightPeriodStruct.hpp](#).

Referenced by [AIRINV::ScheduleParserHelper::storeBoardingTime::operator\(\)](#), [AIRINV::ScheduleParserHelper::storeOffTime::operator\(\)](#), and [AIRINV::ScheduleParserHelper::storeElapsedTime::operator\(\)](#).

24.41.4.16 `long AIRINV::FlightPeriodStruct::_itHours`

Staging Time.

Definition at line 102 of file [FlightPeriodStruct.hpp](#).

Referenced by [getTime\(\)](#).

24.41.4.17 `long AIRINV::FlightPeriodStruct::_itMinutes`

Definition at line 103 of file [FlightPeriodStruct.hpp](#).

Referenced by [getTime\(\)](#).

24.41.4.18 `long AIRINV::FlightPeriodStruct::_itSeconds`

Definition at line 104 of file [FlightPeriodStruct.hpp](#).

Referenced by [getTime\(\)](#), [AIRINV::ScheduleParserHelper::storeDateRangeStart::operator\(\)](#), [AIRINV::ScheduleParserHelper::storeDateRangeEnd::operator\(\)](#), [AIRINV::ScheduleParserHelper::storeBoardingTime::operator\(\)](#), [AIRINV::ScheduleParserHelper::storeOffTime::operator\(\)](#), and [AIRINV::ScheduleParserHelper::storeElapsedTime::operator\(\)](#).

24.41.4.19 AirportList_T AIRINV::FlightPeriodStruct::_airportList

Staging Airport List (helper to derive the list of Segment structures).

Definition at line 108 of file [FlightPeriodStruct.hpp](#).

Referenced by [addAirport\(\)](#), [buildSegments\(\)](#), and [AIRINV::ScheduleParserHelper::storeSegmentSpecificity::operator\(\)](#).

24.41.4.20 AirportOrderedList_T AIRINV::FlightPeriodStruct::_airportOrderedList

Definition at line 109 of file [FlightPeriodStruct.hpp](#).

Referenced by [addAirport\(\)](#), [buildSegments\(\)](#), and [AIRINV::ScheduleParserHelper::storeSegmentSpecificity::operator\(\)](#).

24.41.4.21 bool AIRINV::FlightPeriodStruct::_areSegmentDefinitionsSpecific

Staging Segment-related attributes.

Definition at line 112 of file [FlightPeriodStruct.hpp](#).

Referenced by [AIRINV::ScheduleParserHelper::storeSegmentSpecificity::operator\(\)](#), [AIRINV::ScheduleParserHelper::storeClasses::operator\(\)](#), and [AIRINV::ScheduleParserHelper::storeFClasses::operator\(\)](#).

24.41.4.22 SegmentStruct AIRINV::FlightPeriodStruct::_itSegment

Definition at line 113 of file [FlightPeriodStruct.hpp](#).

Referenced by [AIRINV::ScheduleParserHelper::storeSegmentBoardingPoint::operator\(\)](#), [AIRINV::ScheduleParserHelper::storeSegmentOffPoint::operator\(\)](#), [AIRINV::ScheduleParserHelper::storeClasses::operator\(\)](#), and [AIRINV::ScheduleParserHelper::storeFClasses::operator\(\)](#).

24.41.4.23 SegmentCabinStruct AIRINV::FlightPeriodStruct::_itSegmentCabin

Definition at line 114 of file [FlightPeriodStruct.hpp](#).

Referenced by [AIRINV::ScheduleParserHelper::storeSegmentCabinCode::operator\(\)](#), [AIRINV::ScheduleParserHelper::storeClasses::operator\(\)](#), [AIRINV::ScheduleParserHelper::storeFamilyCode::operator\(\)](#), and [AIRINV::ScheduleParserHelper::storeFClasses::operator\(\)](#).

The documentation for this struct was generated from the following files:

- [airinv/bom/FlightPeriodStruct.hpp](#)
- [airinv/bom/FlightPeriodStruct.cpp](#)

24.42 AIRINV::FlightRequestStatus Struct Reference

```
#include <airinv/FlightRequestStatus.hpp>
```

Inheritance diagram for AIRINV::FlightRequestStatus:

**Public Types**

- enum [EN_FlightRequestStatus](#) { [OK](#) = 0, [NOT_FOUND](#), [INTERNAL_ERROR](#), [LAST_VALUE](#) }

Public Member Functions

- [EN_FlightRequestStatus](#) `getCode () const`
- `const std::string` [describe \(\) const](#)
- [FlightRequestStatus](#) (`const EN_FlightRequestStatus &`)
- [FlightRequestStatus](#) (`const std::string &iCode`)

Static Public Member Functions

- `static const std::string &` [getLabel](#) (`const EN_FlightRequestStatus &`)
- `static const std::string &` [getCodeLabel](#) (`const EN_FlightRequestStatus &`)
- `static std::string` [describeLabels \(\)](#)

24.42.1 Detailed Description

Enumeration of flight type codes.

Definition at line 15 of file [FlightRequestStatus.hpp](#).

24.42.2 Member Enumeration Documentation

24.42.2.1 enum AIRINV::FlightRequestStatus::EN_FlightRequestStatus

Enumerator:

OK
NOT_FOUND
INTERNAL_ERROR
LAST_VALUE

Definition at line 17 of file [FlightRequestStatus.hpp](#).

24.42.3 Constructor & Destructor Documentation

24.42.3.1 AIRINV::FlightRequestStatus::FlightRequestStatus (const EN_FlightRequestStatus & iFlightRequestStatus)

Constructor.

Definition at line 25 of file [FlightRequestStatus.cpp](#).

24.42.3.2 AIRINV::FlightRequestStatus::FlightRequestStatus (const std::string & iCode)

Constructor.

Definition at line 30 of file [FlightRequestStatus.cpp](#).

References [describeLabels\(\)](#), [INTERNAL_ERROR](#), [LAST_VALUE](#), [NOT_FOUND](#), and [OK](#).

24.42.4 Member Function Documentation

24.42.4.1 const std::string & AIRINV::FlightRequestStatus::getLabel (const EN_FlightRequestStatus & iCode)
[static]

Get the label as a string.

Definition at line 58 of file [FlightRequestStatus.cpp](#).

24.42.4.2 `const std::string & AIRINV::FlightRequestStatus::getCodeLabel (const EN_FlightRequestStatus & iCode) [static]`

Get the label as a single char.

Definition at line 64 of file [FlightRequestStatus.cpp](#).

24.42.4.3 `std::string AIRINV::FlightRequestStatus::describeLabels () [static]`

List the labels.

Definition at line 69 of file [FlightRequestStatus.cpp](#).

References [LAST_VALUE](#).

Referenced by [FlightRequestStatus\(\)](#).

24.42.4.4 `FlightRequestStatus::EN_FlightRequestStatus AIRINV::FlightRequestStatus::getCode () const`

Get the enumerated value.

Definition at line 82 of file [FlightRequestStatus.cpp](#).

24.42.4.5 `const std::string AIRINV::FlightRequestStatus::describe () const`

Give a description of the structure (for display purposes).

Definition at line 87 of file [FlightRequestStatus.cpp](#).

The documentation for this struct was generated from the following files:

- [airinv/FlightRequestStatus.hpp](#)
- [airinv/basic/FlightRequestStatus.cpp](#)

24.43 AIRINV::FlightTypeCode Struct Reference

```
#include <airinv/basic/FlightTypeCode.hpp>
```

Inheritance diagram for AIRINV::FlightTypeCode:

Public Types

- enum [EN_FlightTypeCode](#) { [DOMESTIC](#) = 0, [INTERNATIONAL](#), [GROUND_HANDLING](#), [LAST_VALUE](#) }

Public Member Functions

- [EN_FlightTypeCode](#) [getCode](#) () const
- const std::string [describe](#) () const
- [FlightTypeCode](#) (const [EN_FlightTypeCode](#) &)
- [FlightTypeCode](#) (const std::string &iCode)

Static Public Member Functions

- static const std::string & [getLabel](#) (const [EN_FlightTypeCode](#) &)

- static const std::string & [getCodeLabel](#) (const [EN_FlightTypeCode](#) &)
- static std::string [describeLabels](#) ()

24.43.1 Detailed Description

Enumeration of flight type codes.

Definition at line 15 of file [FlightTypeCode.hpp](#).

24.43.2 Member Enumeration Documentation

24.43.2.1 enum AIRINV::FlightTypeCode::EN_FlightTypeCode

Enumerator:

DOMESTIC
INTERNATIONAL
GROUND_HANDLING
LAST_VALUE

Definition at line 17 of file [FlightTypeCode.hpp](#).

24.43.3 Constructor & Destructor Documentation

24.43.3.1 AIRINV::FlightTypeCode::FlightTypeCode (const [EN_FlightTypeCode](#) & *iFlightTypeCode*)

Constructor.

Definition at line 24 of file [FlightTypeCode.cpp](#).

24.43.3.2 AIRINV::FlightTypeCode::FlightTypeCode (const std::string & *iCode*)

Constructor.

Definition at line 29 of file [FlightTypeCode.cpp](#).

References [describeLabels\(\)](#), [DOMESTIC](#), [GROUND_HANDLING](#), [INTERNATIONAL](#), and [LAST_VALUE](#).

24.43.4 Member Function Documentation

24.43.4.1 const std::string & AIRINV::FlightTypeCode::getLabel (const [EN_FlightTypeCode](#) & *iCode*) [static]

Get the label as a string.

Definition at line 54 of file [FlightTypeCode.cpp](#).

24.43.4.2 const std::string & AIRINV::FlightTypeCode::getCodeLabel (const [EN_FlightTypeCode](#) & *iCode*) [static]

Get the label as a single char.

Definition at line 60 of file [FlightTypeCode.cpp](#).

24.43.4.3 std::string AIRINV::FlightTypeCode::describeLabels () [static]

List the labels.

Definition at line 65 of file [FlightTypeCode.cpp](#).

References [LAST_VALUE](#).

Referenced by [FlightTypeCode\(\)](#).

24.43.4.4 FlightTypeCode::EN_FlightTypeCode AIRINV::FlightTypeCode::getCode () const

Get the enumerated value.

Definition at line 77 of file [FlightTypeCode.cpp](#).

Referenced by [AIRINV::InventoryParserHelper::storeFlightTypeCode::operator\(\)\(\)](#).

24.43.4.5 const std::string AIRINV::FlightTypeCode::describe () const

Give a description of the structure (for display purposes).

Definition at line 82 of file [FlightTypeCode.cpp](#).

The documentation for this struct was generated from the following files:

- [airinv/basic/FlightTypeCode.hpp](#)
- [airinv/basic/FlightTypeCode.cpp](#)

24.44 AIRINV::FlightVisibilityCode Struct Reference

```
#include <airinv/basic/FlightVisibilityCode.hpp>
```

Inheritance diagram for AIRINV::FlightVisibilityCode:

Public Types

- enum [EN_FlightVisibilityCode](#) { [NORMAL](#) = 0, [HIDDEN](#), [PSEUDO](#), [LAST_VALUE](#) }

Public Member Functions

- [EN_FlightVisibilityCode](#) [getCode](#) () const
- const std::string [describe](#) () const
- [FlightVisibilityCode](#) (const [EN_FlightVisibilityCode](#) &)
- [FlightVisibilityCode](#) (const std::string &iCode)

Static Public Member Functions

- static const std::string & [getLabel](#) (const [EN_FlightVisibilityCode](#) &)
- static const std::string & [getCodeLabel](#) (const [EN_FlightVisibilityCode](#) &)
- static std::string [describeLabels](#) ()

24.44.1 Detailed Description

Enumeration of flight visibility codes.

Definition at line 15 of file [FlightVisibilityCode.hpp](#).

24.44.2 Member Enumeration Documentation

24.44.2.1 enum AIRINV::FlightVisibilityCode::EN_FlightVisibilityCode

Enumerator:

NORMAL
HIDDEN
PSEUDO
LAST_VALUE

Definition at line 17 of file [FlightVisibilityCode.hpp](#).

24.44.3 Constructor & Destructor Documentation

24.44.3.1 AIRINV::FlightVisibilityCode::FlightVisibilityCode (const EN_FlightVisibilityCode & iFlightVisibilityCode)

Constructor.

Definition at line 25 of file [FlightVisibilityCode.cpp](#).

24.44.3.2 AIRINV::FlightVisibilityCode::FlightVisibilityCode (const std::string & iCode)

Constructor.

Definition at line 30 of file [FlightVisibilityCode.cpp](#).

References [describeLabels\(\)](#), [HIDDEN](#), [LAST_VALUE](#), [NORMAL](#), and [PSEUDO](#).

24.44.4 Member Function Documentation

24.44.4.1 const std::string & AIRINV::FlightVisibilityCode::getLabel (const EN_FlightVisibilityCode & iCode) [static]

Get the label as a string.

Definition at line 57 of file [FlightVisibilityCode.cpp](#).

24.44.4.2 const std::string & AIRINV::FlightVisibilityCode::getCodeLabel (const EN_FlightVisibilityCode & iCode) [static]

Get the label as a single char.

Definition at line 63 of file [FlightVisibilityCode.cpp](#).

24.44.4.3 std::string AIRINV::FlightVisibilityCode::describeLabels () [static]

List the labels.

Definition at line 68 of file [FlightVisibilityCode.cpp](#).

References [LAST_VALUE](#).

Referenced by [FlightVisibilityCode\(\)](#).

24.44.4.4 FlightVisibilityCode::EN_FlightVisibilityCode AIRINV::FlightVisibilityCode::getCode () const

Get the enumerated value.

Definition at line 81 of file [FlightVisibilityCode.cpp](#).

Referenced by [AIRINV::FlightDateStruct::describe\(\)](#), and [AIRINV::InventoryParserHelper::storeFlightVisibilityCode::operator\(\)](#).

24.44.4.5 const std::string AIRINV::FlightVisibilityCode::describe () const

Give a description of the structure (for display purposes).

Definition at line 86 of file [FlightVisibilityCode.cpp](#).

The documentation for this struct was generated from the following files:

- [airinv/basic/FlightVisibilityCode.hpp](#)
- [airinv/basic/FlightVisibilityCode.cpp](#)

24.45 grammar Class Reference

Inheritance diagram for grammar:

The documentation for this class was generated from the following file:

- [airinv/command/ScheduleParserHelper.hpp](#)

24.46 grammar Class Reference

Inheritance diagram for grammar:

The documentation for this class was generated from the following file:

- [airinv/command/vault/DCPParserHelper.hpp](#)

24.47 AIRINV::GuillotineBlockHelper Class Reference

```
#include <airinv/bom/GuillotineBlockHelper.hpp>
```

Static Public Member Functions

- static void [takeSnapshots](#) (stdair::GuillotineBlock &, const stdair::DateTime_T &)

24.47.1 Detailed Description

Class representing the actual business functions for an airline inventory.

Definition at line 22 of file [GuillotineBlockHelper.hpp](#).

24.47.2 Member Function Documentation

24.47.2.1 void AIRINV::GuillotineBlockHelper::takeSnapshots (stdair::GuillotineBlock & ioGuillotineBlock, const stdair::DateTime_T & iSnapshotTime) [static]

Take inventory snapshots.

Definition at line 27 of file [GuillotineBlockHelper.cpp](#).

References [AIRINV::SegmentCabinHelper::updateAvailabilities\(\)](#).

The documentation for this class was generated from the following files:

- [airinv/bom/GuillotineBlockHelper.hpp](#)
- [airinv/bom/GuillotineBlockHelper.cpp](#)

24.48 AIRINV::header Struct Reference

```
#include <airinv/server/header.hpp>
```

Public Attributes

- std::string [name](#)
- std::string [value](#)

24.48.1 Detailed Description

Header structure.

Definition at line 13 of file [header.hpp](#).

24.48.2 Member Data Documentation

24.48.2.1 std::string AIRINV::header::name

Definition at line 14 of file [header.hpp](#).

24.48.2.2 std::string AIRINV::header::value

Definition at line 15 of file [header.hpp](#).

The documentation for this struct was generated from the following file:

- [airinv/server/header.hpp](#)

24.49 AIRINV::InventoryBuilder Class Reference

Class handling the generation / instantiation of the Inventory BOM.

```
#include <airinv/command/InventoryBuilder.hpp>
```

Inheritance diagram for AIRINV::InventoryBuilder:

Friends

- struct [InventoryParserHelper::doEndFlightDate](#)

24.49.1 Detailed Description

Class handling the generation / instantiation of the Inventory BOM.

Definition at line 43 of file [InventoryBuilder.hpp](#).

24.49.2 Friends And Related Function Documentation

24.49.2.1 friend struct [InventoryParserHelper::doEndFlightDate](#) [friend]

Only the following class may use methods of [InventoryBuilder](#). Indeed, as those methods build the BOM, it is not good to expose them publicly.

Definition at line 49 of file [InventoryBuilder.hpp](#).

The documentation for this class was generated from the following files:

- [airinv/command/InventoryBuilder.hpp](#)
- [airinv/command/InventoryBuilder.cpp](#)

24.50 AIRINV::InventoryFileParser Class Reference

```
#include <airinv/command/InventoryParserHelper.hpp>
```

Inheritance diagram for AIRINV::InventoryFileParser:

Public Member Functions

- [InventoryFileParser](#) (stdair::BomRoot &, const stdair::Filename_T &iInventoryInputFilename)
- bool [buildInventory](#) ()

24.50.1 Detailed Description

Class wrapping the initialisation and entry point of the parser.

The seemingly redundancy is used to force the instantiation of the actual parser, which is a templatised Boost Spirit grammar. Hence, the actual parser is instantiated within that class object code.

Definition at line 500 of file [InventoryParserHelper.hpp](#).

24.50.2 Constructor & Destructor Documentation

24.50.2.1 **AIRINV::InventoryFileParser::InventoryFileParser** (stdair::BomRoot & , const stdair::Filename.T & iInventoryInputFilename)

Constructor.

Definition at line 1092 of file [InventoryParserHelper.cpp](#).

24.50.3 Member Function Documentation

24.50.3.1 bool AIRINV::InventoryFileParser::buildInventory ()

Parse the inventory input file.

Definition at line 1116 of file [InventoryParserHelper.cpp](#).

Referenced by [AIRINV::InventoryParser::buildInventory\(\)](#).

The documentation for this class was generated from the following files:

- [airinv/command/InventoryParserHelper.hpp](#)
- [airinv/command/InventoryParserHelper.cpp](#)

24.51 AIRINV::InventoryFileParsingFailedException Class Reference

```
#include <airinv/AIRINV_Types.hpp>
```

Inheritance diagram for AIRINV::InventoryFileParsingFailedException:

Public Member Functions

- [InventoryFileParsingFailedException](#) (const std::string &iWhat)

24.51.1 Detailed Description

The inventory input file can not be parsed.

Definition at line 27 of file [AIRINV_Types.hpp](#).

24.51.2 Constructor & Destructor Documentation

24.51.2.1 AIRINV::InventoryFileParsingFailedException::InventoryFileParsingFailedException (const std::string & iWhat) [inline]

Constructor.

Definition at line 33 of file [AIRINV_Types.hpp](#).

The documentation for this class was generated from the following file:

- [airinv/AIRINV_Types.hpp](#)

24.52 AIRINV::InventoryGenerator Class Reference

Class handling the generation / instantiation of the Inventory BOM.

```
#include <airinv/command/InventoryGenerator.hpp>
```

Inheritance diagram for AIRINV::InventoryGenerator:

Friends

- class [FlightPeriodFileParser](#)
- class [FFFlightPeriodFileParser](#)
- struct [ScheduleParserHelper::doEndFlight](#)
- class [ScheduleParser](#)

24.52.1 Detailed Description

Class handling the generation / instantiation of the Inventory BOM.

Definition at line 42 of file [InventoryGenerator.hpp](#).

24.52.2 Friends And Related Function Documentation

24.52.2.1 friend class [FlightPeriodFileParser](#) [friend]

Only the following class may use methods of [InventoryGenerator](#). Indeed, as those methods build the BOM, it is not good to expose them publicly.

Definition at line 48 of file [InventoryGenerator.hpp](#).

24.56 AIRINV::InventoryParser Class Reference

Class wrapping the parser entry point.

```
#include <airinv/command/InventoryParser.hpp>
```

Inheritance diagram for AIRINV::InventoryParser:

Static Public Member Functions

- static void [buildInventory](#) (const [stdair::Filename_T](#) &*InventoryFilename*, [stdair::BomRoot](#) &)

24.56.1 Detailed Description

Class wrapping the parser entry point.

Definition at line 21 of file [InventoryParser.hpp](#).

24.56.2 Member Function Documentation

24.56.2.1 **void AIRINV::InventoryParser::buildInventory** (const [stdair::Filename_T](#) & *InventoryFilename*, [stdair::BomRoot](#) & *ioBomRoot*) [static]

Parses the CSV file describing an airline inventory, and generates the corresponding data model in memory. It can then be used, for instance, in a simulator.

Parameters

<i>const</i>	stdair::Filename_T& The file-name of the CSV-formatted inventory input file.
<i>stdair::Bom-Root&</i>	Root of the BOM tree.

Definition at line 20 of file [InventoryParser.cpp](#).

References [AIRINV::InventoryFileParser::buildInventory\(\)](#), and [AIRINV::InventoryManager::createDirectAccesses\(\)](#).

Referenced by [AIRINV::AIRINV_Service::parseAndLoad\(\)](#).

24.69 AIRINV::Reply Struct Reference

```
#include <airinv/server/Reply.hpp>
```

Public Member Functions

- `std::vector< boost::asio::const_buffer > to_buffers ()`

Public Attributes

- `FlightRequestStatus::EN_FlightRequestStatus _status`
- `std::string content`

24.69.1 Detailed Description

A reply to be sent to a client.

Definition at line 18 of file [Reply.hpp](#).

24.69.2 Member Function Documentation

24.69.2.1 `std::vector< boost::asio::const_buffer > AIRINV::Reply::to_buffers ()`

Convert the reply into a vector of buffers. The buffers do not own the underlying memory blocks, therefore the reply object must remain valid and not be changed until the write operation has completed.

Definition at line 15 of file [Reply.cpp](#).

References [content](#).

24.69.3 Member Data Documentation

24.69.3.1 `FlightRequestStatus::EN_FlightRequestStatus AIRINV::Reply::_status`

Status.

Definition at line 20 of file [Reply.hpp](#).

Referenced by [AIRINV::RequestHandler::handleRequest\(\)](#).

24.69.3.2 `std::string AIRINV::Reply::content`

The content to be sent in the reply.

Definition at line 23 of file [Reply.hpp](#).

Referenced by [AIRINV::RequestHandler::handleRequest\(\)](#), and [to_buffers\(\)](#).

The documentation for this struct was generated from the following files:

- [airinv/server/Reply.cpp](#)

24.70 AIRINV::Request Struct Reference

```
#include <airinv/server/Request.hpp>
```

Public Member Functions

- `bool parseFlightDate ()`

Public Attributes

- `std::string _flightDetails`
- `stdair::AirlineCode_T _airlineCode`
- `stdair::FlightNumber_T _flightNumber`
- `stdair::Date_T _departureDate`

24.70.1 Detailed Description

A request received from a client.

Definition at line 18 of file [Request.hpp](#).

24.70.2 Member Function Documentation

24.70.2.1 bool AIRINV::Request::parseFlightDate ()

Parse the incoming request.

Expected requested is of the form: <airline_code>,<flight_number>,<flight_date>, where date format is YYYY-MM-DD. For instance: BA,341,2010-09-20.

Definition at line 12 of file [Request.cpp](#).

References [_airlineCode](#), [_departureDate](#), and [_flightNumber](#).

Referenced by [AIRINV::RequestHandler::handleRequest\(\)](#).

24.70.3 Member Data Documentation

24.70.3.1 std::string AIRINV::Request::_flightDetails

String as it comes from the connected client.

Definition at line 29 of file [Request.hpp](#).

Referenced by [AIRINV::RequestHandler::handleRequest\(\)](#).

24.70.3.2 stdair::AirlineCode.T AIRINV::Request::_airlineCode

Parsed airline code.

Definition at line 31 of file [Request.hpp](#).

Referenced by [parseFlightDate\(\)](#).

24.70.3.3 stdair::FlightNumber.T AIRINV::Request::_flightNumber

Parsed flight number.

Definition at line 33 of file [Request.hpp](#).

Referenced by [parseFlightDate\(\)](#).

24.70.3.4 stdair::Date.T AIRINV::Request::_departureDate

Parsed departure date.

Definition at line 35 of file [Request.hpp](#).

Referenced by [parseFlightDate\(\)](#).

The documentation for this struct was generated from the following files:

- [airinv/server/Request.hpp](#)
- [airinv/server/Request.cpp](#)

24.71 AIRINV::RequestHandler Class Reference

The common handler for all incoming requests.

```
#include <airinv/server/RequestHandler.hpp>
```

Inheritance diagram for AIRINV::RequestHandler:

Public Member Functions

- [RequestHandler](#) (const stdair::AirlineCode_T &)
- bool [handleRequest](#) ([Request](#) &, [Reply](#) &) const

24.71.1 Detailed Description

The common handler for all incoming requests.

Definition at line 28 of file [RequestHandler.hpp](#).

24.71.2 Constructor & Destructor Documentation

24.71.2.1 AIRINV::RequestHandler::RequestHandler (const stdair::AirlineCode_T & iAirlineCode)

Constructor.

Parameters

<i>const</i>	stdair::AirlineCode_T& Airline code of the inventory owner.
--------------	---

Definition at line 20 of file [RequestHandler.cpp](#).

24.71.3 Member Function Documentation

24.71.3.1 bool AIRINV::RequestHandler::handleRequest ([Request](#) & ioRequest, [Reply](#) & ioReply) const

Handle a request and produce a reply.

Definition at line 26 of file [RequestHandler.cpp](#).

References [AIRINV::Request::_flightDetails](#), [AIRINV::Reply::_status](#), [AIRINV::Reply::content](#), [AIRINV::FlightRequestStatus::INTERNAL_ERROR](#), [AIRINV::FlightRequestStatus::OK](#), and [AIRINV::Request::parseFlightDate\(\)](#).

The documentation for this class was generated from the following files:

24.72 AIRINV::RequestParser Class Reference

Parser for incoming requests.

```
#include <airinv/server/RequestParser.hpp>
```

Public Member Functions

- [RequestParser](#) ()
Construct ready to parse the request method.
- void [reset](#) ()

Reset to initial parser state.

- `template<typename InputIterator >`
`boost::tuple< boost::tribool,`
`InputIterator > parse (Request &req, InputIterator begin, InputIterator end)`

24.72.1 Detailed Description

Parser for incoming requests.

Definition at line 17 of file [RequestParser.hpp](#).

24.72.2 Constructor & Destructor Documentation

24.72.2.1 AIRINV::RequestParser::RequestParser ()

Construct ready to parse the request method.

Definition at line 13 of file [RequestParser.cpp](#).

24.72.3 Member Function Documentation

24.72.3.1 void AIRINV::RequestParser::reset ()

Reset to initial parser state.

Definition at line 18 of file [RequestParser.cpp](#).

24.72.3.2 `template<typename InputIterator > boost::tuple<boost::tribool, InputIterator> AIRINV::RequestParser::parse (Request & req, InputIterator begin, InputIterator end)` `[inline]`

Parse some data. The tribool return value is true when a complete request has been parsed, false if the data is invalid, indeterminate when more data is required. The InputIterator return value indicates how much of the input has been consumed.

Definition at line 30 of file [RequestParser.hpp](#).

The documentation for this class was generated from the following files:

- [airinv/server/RequestParser.hpp](#)
- [airinv/server/RequestParser.cpp](#)

24.73 RootException Class Reference

24.76 AIRINV::ScheduleParser Class Reference

Class wrapping the parser entry point.

```
#include <airinv/command/ScheduleParser.hpp>
```

Inheritance diagram for AIRINV::ScheduleParser:

Static Public Member Functions

- static void [generateInventories](#) (const stdair::Filename_T & iScheduleFilename, stdair::BomRoot &)

24.76.1 Detailed Description

Class wrapping the parser entry point.

Definition at line 21 of file [ScheduleParser.hpp](#).

24.76.2 Member Function Documentation

24.76.2.1 void AIRINV::ScheduleParser::generateInventories (const stdair::Filename_T & iScheduleFilename, stdair::BomRoot & ioBomRoot) [static]

Parse the CSV file describing the airline schedules for the simulator, and generates the inventories accordingly.

Parameters

<i>const</i>	stdair::Filename_T& The file-name of the CSV-formatted schedule input file.
<i>stdair::Bom-Root&</i>	Root of the BOM tree.

Definition at line 20 of file [ScheduleParser.cpp](#).

References [AIRINV::InventoryManager::buildSimilarSegmentCabinSets\(\)](#), [AIRINV::InventoryManager::createDirectAccesses\(\)](#), [AIRINV::FlightPeriodFileParser::generateInventories\(\)](#), and [AIRINV::InventoryManager::setDefaultBidPriceVector\(\)](#).

Referenced by [AIRINV::AIRINV_Service::parseAndLoad\(\)](#).

The documentation for this class was generated from the following files:

24.77 AIRINV::SegmentCabinHelper Class Reference

Class representing the actual business functions for an airline segment-cabin.

```
#include <airinv/bom/SegmentCabinHelper.hpp>
```

Static Public Member Functions

- static void [updateFromReservation](#) (const stdair::FlightDate &, stdair::SegmentCabin &, const stdair::PartySize_T &)
- static void [buildPseudoBidPriceVector](#) (stdair::SegmentCabin &)
- static void [updateBookingControlsUsingPseudoBidPriceVector](#) (const stdair::SegmentCabin &)
- static void [updateAUs](#) (const stdair::SegmentCabin &)
- static void [updateAvailabilities](#) (const stdair::SegmentCabin &)
- static void [initialiseAU](#) (stdair::SegmentCabin &)

24.77.1 Detailed Description

Class representing the actual business functions for an airline segment-cabin.

Definition at line 23 of file [SegmentCabinHelper.hpp](#).

24.77.2 Member Function Documentation

24.77.2.1 void [AIRINV::SegmentCabinHelper::updateFromReservation](#) (const stdair::FlightDate & *iFlightDate*, stdair::SegmentCabin & *ioSegmentCabin*, const stdair::PartySize_T & *iNbOfBookings*) [static]

Update the segment-cabin with the reservation.

Definition at line 57 of file [SegmentCabinHelper.cpp](#).

References [AIRINV::FlightDateHelper::updateAvailabilityPool\(\)](#).

Referenced by [AIRINV::InventoryHelper::cancel\(\)](#), and [AIRINV::InventoryHelper::sell\(\)](#).

24.77.2.2 void [AIRINV::SegmentCabinHelper::buildPseudoBidPriceVector](#) (stdair::SegmentCabin & *ioSegmentCabin*) [static]

Build the pseudo bid price vector from the vectors of the leg-cabins.

Definition at line 82 of file [SegmentCabinHelper.cpp](#).

Referenced by [AIRINV::FlightDateHelper::updateBookingControls\(\)](#).

24.77.2.3 void [AIRINV::SegmentCabinHelper::updateBookingControlsUsingPseudoBidPriceVector](#) (const stdair::SegmentCabin & *iSegmentCabin*) [static]

Update the booking controls using the pseudo bid price vector.

Definition at line 126 of file [SegmentCabinHelper.cpp](#).

References [updateAUs\(\)](#).

Referenced by [AIRINV::FlightDateHelper::updateBookingControls\(\)](#).

24.77.2.4 `void AIRINV::SegmentCabinHelper::updateAUs (const stdair::SegmentCabin & iSegmentCabin)`
`[static]`

Update the authorisation levels using the booking limits.

Definition at line 158 of file [SegmentCabinHelper.cpp](#).

Referenced by [updateBookingControlsUsingPseudoBidPriceVector\(\)](#).

24.77.2.5 `void AIRINV::SegmentCabinHelper::updateAvailabilities (const stdair::SegmentCabin & iSegmentCabin)`
`[static]`

Update the availability of the booking classes.

Definition at line 190 of file [SegmentCabinHelper.cpp](#).

Referenced by [AIRINV::InventoryHelper::calculateAvailability\(\)](#), and [AIRINV::GuillotineBlockHelper::take-Snapshots\(\)](#).

24.77.2.6 `void AIRINV::SegmentCabinHelper::initialiseAU (stdair::SegmentCabin & iSegmentCabin)` `[static]`

Initialise the AU for the booking classes.

Definition at line 21 of file [SegmentCabinHelper.cpp](#).

Referenced by [AIRINV::SegmentDateHelper::fillFromRouting\(\)](#).

The documentation for this class was generated from the following files:

- [airinv/bom/SegmentCabinHelper.hpp](#)
- [airinv/bom/SegmentCabinHelper.cpp](#)

24.78 AIRINV::SegmentCabinStruct Struct Reference

Utility Structure for the parsing of SegmentCabin details.

`#include <airinv/bom/SegmentCabinStruct.hpp>`

Inheritance diagram for AIRINV::SegmentCabinStruct:

24.79 AIRINV::SegmentDateHelper Class Reference

```
#include <airinv/bom/SegmentDateHelper.hpp>
```

Static Public Member Functions

- static void [fillFromRouting](#) (stdair::SegmentDate &)
- static void [updateElapsedTimeFromRouting](#) (stdair::SegmentDate &)
- static void [updateDistanceFromElapsedTime](#) (stdair::SegmentDate &)

24.79.1 Detailed Description

Class representing the actual business functions for an airline segment-date.

Definition at line 16 of file [SegmentDateHelper.hpp](#).

24.79.2 Member Function Documentation

24.79.2.1 void AIRINV::SegmentDateHelper::fillFromRouting (stdair::SegmentDate & *ioSegmentDate*)
[static]

Fill the attributes derived from the routing legs (e.g., board and off dates).

Definition at line 18 of file [SegmentDateHelper.cpp](#).

References [AIRINV::SegmentCabinHelper::initialiseAU\(\)](#), and [updateElapsedTimeFromRouting\(\)](#).

24.79.2.2 void AIRINV::SegmentDateHelper::updateElapsedTimeFromRouting (stdair::SegmentDate & *ioSegmentDate*) [static]

Calculate and set the elapsed time according to the leg routing.

Actually, the elapsed time of the segment is the sum of the elapsed times of the routing legs, plus the stop-over times. The stop-over time is the difference between the board time of a routing leg, and the off time of the previous leg. That is, it is the time spent at the corresponding airport.

Of course, in case of mono-leg segments, there is no stop-over, and the elapsed time of the segment is equal to the elapsed time of the single routing leg.

Definition at line 73 of file [SegmentDateHelper.cpp](#).

References [updateDistanceFromElapsedTime\(\)](#).

Referenced by [fillFromRouting\(\)](#).

24.79.2.3 void AIRINV::SegmentDateHelper::updateDistanceFromElapsedTime (stdair::SegmentDate & *ioSegmentDate*) [static]

Method computing the distance of the segment (in kilometers).

Definition at line 116 of file [SegmentDateHelper.cpp](#).

Referenced by [updateElapsedTimeFromRouting\(\)](#).

The documentation for this class was generated from the following files:

- [airinv/bom/SegmentDateHelper.hpp](#)

Public Member Functions

- virtual [~ServiceAbstract](#) ()
- virtual void [toStream](#) (std::ostream &ioOut) const
- virtual void [fromStream](#) (std::istream &ioIn)

Protected Member Functions

- [ServiceAbstract](#) ()

24.83.1 Detailed Description

Base class for the Service layer.

Definition at line 14 of file [ServiceAbstract.hpp](#).

24.83.2 Constructor & Destructor Documentation

24.83.2.1 virtual **AIRINV::ServiceAbstract::~~ServiceAbstract** () [inline, virtual]

Destructor.

Definition at line 18 of file [ServiceAbstract.hpp](#).

24.83.2.2 **AIRINV::ServiceAbstract::ServiceAbstract** () [inline, protected]

Protected Default Constructor to ensure this class is abstract.

Definition at line 30 of file [ServiceAbstract.hpp](#).

24.83.3 Member Function Documentation

24.83.3.1 virtual void **AIRINV::ServiceAbstract::toStream** (std::ostream & *ioOut*) const [inline, virtual]

Dump a Business Object into an output stream.

Parameters

<i>ostream&</i>	the output stream.
---------------------	--------------------

Definition at line 22 of file [ServiceAbstract.hpp](#).

24.83.3.2 virtual void **AIRINV::ServiceAbstract::fromStream** (std::istream & *ioIn*) [inline, virtual]

Read a Business Object from an input stream.

Parameters

<i>istream&</i>	the input stream.
---------------------	-------------------

Definition at line 26 of file [ServiceAbstract.hpp](#).

Referenced by [operator>>\(\)](#).

The documentation for this class was generated from the following file:

24.84 swift::SKeymap Class Reference

The readline keymap wrapper.

```
#include <airinv/ui/cmdline/SReadline.hpp>
```

Public Member Functions

- [SKeymap](#) (bool PrintableBound=false)
Creates a new keymap.
- [SKeymap](#) (Keymap Pattern)
Creates a new keymap which is a copy of Pattern.
- [~SKeymap](#) ()
Frees the allocated keymap.
- void [Bind](#) (int Key, KeyCallback Callback)
Binds the given key to a function.
- void [Unbind](#) (int Key)
Unbinds the given key.
- [SKeymap](#) (const [SKeymap](#) &rhs)
Copy constructor.
- [SKeymap](#) & [operator=](#) (const [SKeymap](#) &rhs)
operator=

Friends

- class [SReadline](#)

24.84.1 Detailed Description

The readline keymap wrapper.

Attention: It is not thread safe! Supports: key binding, key unbinding

Definition at line 307 of file [SReadline.hpp](#).

24.84.2 Constructor & Destructor Documentation

24.84.2.1 swift::SKeymap::SKeymap (bool PrintableBound = false) [inline, explicit]

Creates a new keymap.

Parameters

<i>PrintableBound</i>	if true - the printable characters are bound if false - the keymap is empty
-----------------------	---

Definition at line 319 of file [SReadline.hpp](#).

24.84.2.2 swift::SKeymap::SKeymap (Keymap Pattern) [inline, explicit]

Creates a new keymap which is a copy of Pattern.

Parameters

<i>Pattern</i>	A keymap to be copied.
----------------	------------------------

Definition at line 342 of file [SReadline.hpp](#).

24.84.2.3 swift::SKeymap::~~SKeymap () `[inline]`

Frees the allocated keymap.

Definition at line 354 of file [SReadline.hpp](#).

24.84.2.4 swift::SKeymap::SKeymap (const SKeymap & rhs) `[inline]`

Copy constructor.

Parameters

<i>rhs</i>	Right hand side object of SKeymap
------------	---

Definition at line 395 of file [SReadline.hpp](#).

24.84.3 Member Function Documentation**24.84.3.1 void swift::SKeymap::Bind (int Key, KeyCallback Callback)** `[inline]`

Binds the given key to a function.

Parameters

<i>Key</i>	A key to be bound
<i>Callback</i>	A function to be called when the Key is pressed

Definition at line 366 of file [SReadline.hpp](#).

24.84.3.2 void swift::SKeymap::Unbind (int Key) `[inline]`

Unbinds the given key.

Parameters

<i>Key</i>	A key to be unbound
------------	---------------------

Definition at line 381 of file [SReadline.hpp](#).

24.84.3.3 SKeymap& swift::SKeymap::operator= (const SKeymap & rhs) `[inline]`

operator=

Parameters

<i>rhs</i>	Right hand side object of SKeymap
------------	---

Definition at line 407 of file [SReadline.hpp](#).

24.84.4 Friends And Related Function Documentation**24.84.4.1 friend class SReadline** `[friend]`

Definition at line 415 of file [SReadline.hpp](#).

The documentation for this class was generated from the following file:

- [airinv/ui/cmdline/SReadline.hpp](#)

24.85 swift::SReadline Class Reference

The readline library wrapper.

```
#include <airinv/ui/cmdline/SReadline.hpp>
```

Public Member Functions

- [SReadline](#) (const size_t Limit=DefaultHistoryLimit)
Constructs the object, sets the completion function.
- [SReadline](#) (const std::string &historyFileName, const size_t Limit=DefaultHistoryLimit)
Constructs the object, sets the completion function, loads history.
- [~SReadline](#) ()
Saves the session history (if the file name was provided) and destroys the object.
- std::string [GetLine](#) (const std::string &Prompt)
Gets a single line from a user.
- template<typename Container >
std::string [GetLine](#) (const std::string &Prompt, Container &ReadTokens)
Gets a single line from a user.
- template<typename Container >
std::string [GetLine](#) (const std::string &Prompt, Container &ReadTokens, bool &BreakOut)
Gets a single line from a user.
- std::string [GetLine](#) (const std::string &Prompt, bool &BreakOut)
Gets a single line from a user.
- template<typename ContainerType >
void [GetHistory](#) (ContainerType &Container)
Fills the given container with the current history list.
- bool [SaveHistory](#) (std::ostream &OS)
Saves the history to the given file stream.
- bool [SaveHistory](#) (const std::string &FileName)
Saves the history to the given file.
- void [ClearHistory](#) ()
Clears the history. Does not affect the file where the previous session history is saved.
- bool [LoadHistory](#) (std::istream &IS)
Loads a history from a file stream.
- bool [LoadHistory](#) (const std::string &FileName)
Loads a history from the given file.
- template<typename ContainerType >
void [RegisterCompletions](#) (const ContainerType &Container)
Allows to register custom completers.
- void [SetKeymap](#) (SKeymap &NewKeymap)
Sets the given keymap.

24.85.1 Detailed Description

The readline library wrapper.

Attention: It is not thread safe! Supports: editing, history, custom completers

Definition at line 424 of file [SReadline.hpp](#).

24.85.2 Constructor & Destructor Documentation

24.85.2.1 swift::SReadline::SReadline (const size_t *Limit* = DefaultHistoryLimit) [inline]

Constructs the object, sets the completion function.

Parameters

<i>Limit</i>	History size
--------------	--------------

Definition at line 431 of file [SReadline.hpp](#).

24.85.2.2 swift::SReadline::SReadline (const std::string & *historyFileName*, const size_t *Limit* = DefaultHistoryLimit) [inline]

Constructs the object, sets the completion function, loads history.

Parameters

<i>historyFileName</i>	File name to load history from
<i>Limit</i>	History size

Definition at line 446 of file [SReadline.hpp](#).

References [LoadHistory\(\)](#).

24.85.2.3 swift::SReadline::~~SReadline () [inline]

Saves the session history (if the file name was provided) and destroys the object.

Definition at line 460 of file [SReadline.hpp](#).

References [SaveHistory\(\)](#).

24.85.3 Member Function Documentation

24.85.3.1 std::string swift::SReadline::GetLine (const std::string & *Prompt*) [inline]

Gets a single line from a user.

Parameters

<i>Prompt</i>	A printed prompt
---------------	------------------

Returns

A string which was actually inputed

Definition at line 471 of file [SReadline.hpp](#).

Referenced by [GetLine\(\)](#).

24.85.3.2 template<typename Container> std::string swift::SReadline::GetLine (const std::string & *Prompt*, Container & *ReadTokens*) [inline]

Gets a single line from a user.

Parameters

<i>Prompt</i>	A printed prompt
<i>ReadTokens</i>	A user inputed string splitted into tokens. The container is cleared first

Returns

A string which was actually inputed

Definition at line 485 of file [SReadline.hpp](#).

References [GetLine\(\)](#).

24.85.3.3 `template<typename Container > std::string swift::SReadline::GetLine (const std::string & Prompt, Container & ReadTokens, bool & BreakOut) [inline]`

Gets a single line from a user.

Parameters

<i>Prompt</i>	A printed prompt
<i>BreakOut</i>	it is set to true if the EOF found
<i>ReadTokens</i>	A user inputed string splitted into tokens. The container is cleared first

Returns

A string which was actually inputed

Definition at line 500 of file [SReadline.hpp](#).

References [GetLine\(\)](#).

24.85.3.4 `std::string swift::SReadline::GetLine (const std::string & Prompt, bool & BreakOut) [inline]`

Gets a single line from a user.

Parameters

<i>Prompt</i>	A printed prompt
<i>BreakOut</i>	it is set to true if the EOF found

Returns

A string which was actually inputed

Definition at line 515 of file [SReadline.hpp](#).

24.85.3.5 `template<typename ContainerType > void swift::SReadline::GetHistory (ContainerType & Container) [inline]`

Fills the given container with the current history list.

Does not clear the given container

Definition at line 550 of file [SReadline.hpp](#).

24.85.3.6 `bool swift::SReadline::SaveHistory (std::ostream & OS) [inline]`

Saves the history to the given file stream.

Parameters

<i>OS</i>	output file stream
-----------	--------------------

Returns

true if success

Definition at line 562 of file [SReadline.hpp](#).

Referenced by [SaveHistory\(\)](#), and [~SReadline\(\)](#).

24.85.3.7 `bool swift::SReadline::SaveHistory (const std::string & FileName)` `[inline]`

Saves the history to the given file.

Parameters

<i>FileName</i>	File name to save the history to
-----------------	----------------------------------

Returns

true if success

Definition at line 579 of file [SReadline.hpp](#).

References [SaveHistory\(\)](#).

24.85.3.8 `void swift::SReadline::ClearHistory ()` `[inline]`

Clears the history. Does not affect the file where the previous session history is saved.

Definition at line 592 of file [SReadline.hpp](#).

Referenced by [LoadHistory\(\)](#).

24.85.3.9 `bool swift::SReadline::LoadHistory (std::istream & IS)` `[inline]`

Loads a history from a file stream.

Parameters

<i>IS</i>	Input file stream
-----------	-------------------

Returns

true if success

Definition at line 602 of file [SReadline.hpp](#).

References [ClearHistory\(\)](#).

Referenced by [LoadHistory\(\)](#), and [SReadline\(\)](#).

24.85.3.10 `bool swift::SReadline::LoadHistory (const std::string & FileName)` `[inline]`

Loads a history from the given file.

Parameters

<i>FileName</i>	File name to be load from
-----------------	---------------------------

Returns

true if success

Definition at line 627 of file [SReadline.hpp](#).

References [LoadHistory\(\)](#).

24.85.3.11 `template<typename ContainerType > void swift::SReadline::RegisterCompletions (const ContainerType & Container) [inline]`

Allows to register custom completers.

Supports a special keyword: file. It means to use the standard file name completer.

For example the given container elements could be as follows:

- command1 opt1
- command1 opt2 file
- command2
- command2 opt1

Each container element must describe a single possible command line. The container element must have a conversion to `std::string` operator.

Parameters

<i>Container</i>	A container which has all the user possible commands.
------------------	---

Definition at line [656](#) of file [SReadline.hpp](#).

24.85.3.12 `void swift::SReadline::SetKeymap (SKeymap & NewKeymap) [inline]`

Sets the given keymap.

Parameters

<i>NewKeymap</i>	The keymap that should be used from now.
------------------	--

Definition at line [673](#) of file [SReadline.hpp](#).

25.233.1 Typedef Documentation

25.233.1.1 typedef int(* pt2Func)(char *)

Definition at line 35 of file [readline_autocomp.hpp](#).

25.233.2 Function Documentation

25.233.2.1 char* getwd ()

[readline_autocomp.hpp](#) -- A tiny application which demonstrates how to use the GNU Readline library. This application interactively allows users to manipulate files and their modes.

Referenced by [com_pwd\(\)](#).

25.233.2.2 char* xmalloc (size_t)

Referenced by [dupstr\(\)](#).

25.233.2.3 void com_list (char * arg)

List the file(s) named in arg.

Definition at line 264 of file [readline_autocomp.hpp](#).

25.233.2.4 int com_view (char * arg)

Definition at line 274 of file [readline_autocomp.hpp](#).

References [valid_argument\(\)](#).

25.233.2.5 int com_rename (char * arg)

Definition at line 284 of file [readline_autocomp.hpp](#).

References [too_dangerous\(\)](#).

25.233.2.6 int com_stat (char * arg)

Definition at line 289 of file [readline_autocomp.hpp](#).

References [valid_argument\(\)](#).

25.233.2.7 int com_pwd (char * *ignore*)

Definition at line 367 of file [readline_autocomp.hpp](#).

References [getwd\(\)](#).

Referenced by [com_cd\(\)](#).

25.233.2.8 int com_delete (char * *arg*)

Definition at line 315 of file [readline_autocomp.hpp](#).

References [too_dangerous\(\)](#).

25.233.2.9 int com_help (char * *arg*)

Print out help for ARG, or for all of the commands if ARG is not present.

Definition at line 324 of file [readline_autocomp.hpp](#).

References [COMMAND::name](#).

25.233.2.10 int com_cd (char * *arg*)

Definition at line 356 of file [readline_autocomp.hpp](#).

References [com_pwd\(\)](#).

25.233.2.11 int com_quit (char * *arg*)

Definition at line 381 of file [readline_autocomp.hpp](#).

25.233.2.12 char * stripwhite (char * *string*)

Strip whitespace from the start and end of STRING. Return a pointer into STRING.

Definition at line 152 of file [readline_autocomp.hpp](#).

25.233.2.13 COMMAND * find_command (char * *name*)

Look up NAME as the name of a command, and return a pointer to that command. Return a NULL pointer if NAME isn't a command name.

Definition at line 136 of file [readline_autocomp.hpp](#).

References [COMMAND::name](#).

Referenced by [execute_line\(\)](#).

25.233.2.14 char* dupstr (char * *iString*)

Duplicate a string

Definition at line 85 of file [readline_autocomp.hpp](#).

References [xmalloc\(\)](#).

Referenced by [command_generator\(\)](#).

25.233.2.15 int execute_line (char * *line*)

Execute a command line.

Definition at line 94 of file [readline_autocomp.hpp](#).

References [find_command\(\)](#), and [COMMAND::func](#).

25.233.2.16 `char * command_generator (char * text, int state)`

Generator function for command completion. STATE lets us know whether to start from scratch; without any state (i.e. STATE == 0), then we start at the top of the list.

Definition at line 222 of file [readline_autocomp.hpp](#).

References [dupstr\(\)](#).

Referenced by [fileman_completion\(\)](#).

25.233.2.17 `char ** fileman_completion (char * text, int start, int end)`

Attempt to complete on the contents of TEXT. START and END bound the region of rl_line_buffer that contains the word to complete. TEXT is the word to complete. We can use the entire contents of rl_line_buffer in case we want to do some simple parsing. Return the array of matches, or NULL if there aren't any.

Definition at line 200 of file [readline_autocomp.hpp](#).

References [command_generator\(\)](#).

Referenced by [initialize_readline\(\)](#).

25.233.2.18 `void initialize_readline ()`

Tell the GNU Readline library how to complete. We want to try to complete on command names if this is the first word in the line, or on filenames if not.

Definition at line 185 of file [readline_autocomp.hpp](#).

References [fileman_completion\(\)](#).

25.233.2.19 `void too_dangerous (char * caller)`

Definition at line 387 of file [readline_autocomp.hpp](#).

Referenced by [com_delete\(\)](#), and [com_rename\(\)](#).

25.233.2.20 `int valid_argument (char * caller, char * arg)`

Definition at line 395 of file [readline_autocomp.hpp](#).

Referenced by [com_stat\(\)](#), and [com_view\(\)](#).

25.233.3 Variable Documentation**25.233.3.1** `COMMAND commands[]`

Initial value:

```
{
  { "cd", (*com_cd)(), "Change to directory DIR" },
  { "delete", com_delete, "Delete FILE" },
  { "help", com_help, "Display this text" },
  { "?", com_help, "Synonym for 'help'" },
  { "list", com_list, "List files in DIR" },
  { "ls", com_list, "Synonym for 'list'" },
  { "pwd", com_pwd, "Print the current working directory" },
  { "quit", com_quit, "Quit using airinv" },
  { "rename", com_rename, "Rename FILE to NEWNAME" },
  { "stat", com_stat, "Print out statistics on FILE" },
  { "view", com_view, "View the contents of FILE" },
  { (char*) NULL, (pt2Func) NULL, (char*) NULL }
}
```

Definition at line 58 of file [readline_autocomp.hpp](#).

25.233.3.2 int done

When non-zero, this global means the user is done using this program.

Definition at line 80 of file [readline_autocomp.hpp](#).

25.233.3.3 char syscom[1024] [static]

String to pass to system(). This is for the LIST, VIEW and RENAME commands.

Definition at line 259 of file [readline_autocomp.hpp](#).

25.234 readline_autocomp.hpp

```

25.235 airinv/ui/cmdline/SReadline.hpp File Reference

C++ wrapper around libreadline.

```

#include <cstdio>
#include <readline/readline.h>
#include <readline/history.h>
#include <readline/keymaps.h>
#include <string>
#include <fstream>
#include <vector>
#include <stdexcept>
#include <map>
#include <boost/algorithm/string/trim.hpp>
#include <boost/tokenizer.hpp>
#include <boost/function.hpp>

```

Classes

- class [swift::SKeymap](#)
The readline keymap wrapper.
- class [swift::SReadline](#)
The readline library wrapper.

Namespaces

- namespace [swift](#)
The wrapper namespace.

25.235.1 Detailed Description

C++ wrapper around libreadline. Supported: editing, history, custom completers, keymaps. Attention: implementation is not thread safe! It is mainly because the readline library provides pure C interface and has many calls for an "atomic" completion operation

Definition in file [SReadline.hpp](#).

25.236 SReadline.hpp
