Context `GregorianTranscriptionStaff` can contain [Section 2.1.3 \[CueVoice\]](#), page 61 and [Section 2.1.13 \[GregorianTranscriptionVoice\]](#), page 113.

This context is built from the following engraver(s):

[Section 2.2.1 \[Accidental\\_engraver\]](#), page 287

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at `Staff` level, but reads the settings for `Accidental` at `Voice` level, so you can `\override` them at `Voice`.

Properties (read)

**autoAccidentals** (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used.

Each entry in the list is either a symbol or a procedure.

*symbol*      The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is **Section “Score” in *Internals Reference*** then all staves share accidentals, and if *context* is **Section “Staff” in *Internals Reference*** then all voices in the same staff share accidentals, but staves do not.

*procedure*    The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

**context**      The current context to which the rule should be applied.

**pitch**        The pitch of the note to be evaluated.

**barnum**       The current bar number.

**measurepos**    The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (**#t** . **#f**) does not make sense.

**autoCautionaries** (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

**extraNatural** (boolean)

Whether to typeset an extra natural sign before accidentals that reduce the effect of a previous alteration.

**harmonicAccidentals** (boolean)

If set, harmonic notes in chords get accidentals.

**internalBarNumber** (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the `Accidental_engraver`.

**keySignature** (list)

The current key signature. This is an alist containing `(step . alter)` or `((octave . step) . alter)`, where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. `keySignature = #'((6 . ,FLAT))`.

**localKeySignature** (list)

The key signature at this point in the measure. The format is the same as for `keySignature`, but can also contain `((octave . name) . (alter barnumber . measureposition))` pairs.

Properties (write)

**localKeySignature** (list)

The key signature at this point in the measure. The format is the same as for `keySignature`, but can also contain `((octave . name) . (alter barnumber . measureposition))` pairs.

This engraver creates the following layout object(s):

Section 3.1.133 [VerticalAxisGroup], page 461.

#### Section 2.2.7 [Bar\_engraver], page 291

Create barlines. This engraver is controlled through the `whichBar` property. If it has no bar line to create, it will forbid a linebreak at this point. This engraver is required to trigger the creation of clefs at the start of systems.

Properties (read)

**whichBar** (string)

This property is read to determine what type of bar line to create.

Example:

```
\set Staff.whichBar = "|:"
```

This will create a start-repeat bar in this staff only. Valid values are described in [Section “bar-line-interface”](#) in *Internals Reference*.

Properties (write)

**forbidBreak** (boolean)

If set to **#t**, prevent a line break at this point.

This engraver creates the following layout object(s):

Context `KievanStaff` can contain [Section 2.1.3 \[CueVoice\], page 61](#) and [Section 2.1.15 \[Kievan-Voice\], page 136](#).

This context is built from the following engraver(s):

**Section 2.2.1 [Accidental\_engraver], page 287**

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at `Staff` level, but reads the settings for `Accidental` at `Voice` level, so you can `\override` them at `Voice`.

Properties (read)

`autoAccidentals` (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used. Each entry in the list is either a symbol or a procedure.

*symbol*      The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is [Section “Score” in Internals Reference](#) then all staves share accidentals, and if *context* is [Section “Staff” in Internals Reference](#) then all voices in the same staff share accidentals, but staves do not.

*procedure*   The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

**context**      The current context to which the rule should be applied.

**pitch**      The pitch of the note to be evaluated.

**barnum**      The current bar number.

**measurepos**      The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (**#t** . **#f**) does not make sense.

**autoCautionaries** (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

**extraNatural** (boolean)

Whether to typeset an extra natural sign before accidentals that reduce the effect of a previous alteration.

**harmonicAccidentals** (boolean)

If set, harmonic notes in chords get accidentals.

**internalBarNumber** (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the **Accidental\_engraver**.

**keySignature** (list)

The current key signature. This is an alist containing (*step* . *alter*) or ((*octave* . *step*) . *alter*), where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. **keySignature** = **#`((6 . ,FLAT))**.

**localKeySignature** (list)

The key signature at this point in the measure. The format is the same as for **keySignature**, but can also contain ((*octave* . *name*) . (*alter* *barnumber* . *measureposition*)) pairs.

Properties (write)

**localKeySignature** (list)

The key signature at this point in the measure. The format is the same as for **keySignature**, but can also contain ((*octave* . *name*) . (*alter* *barnumber* . *measureposition*)) pairs.

Context `MensuralStaff` can contain [Section 2.1.3 \[CueVoice\], page 61](#) and [Section 2.1.18 \[MensuralVoice\], page 162](#).

This context is built from the following engraver(s):

**Section 2.2.1 [Accidental\_engraver], page 287**

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at `Staff` level, but reads the settings for `Accidental` at `Voice` level, so you can `\override` them at `Voice`.

Properties (read)

`autoAccidentals` (list)

List of different ways to typeset an accidental. For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used. Each entry in the list is either a symbol or a procedure.

*symbol*      The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is [Section “Score” in Internals Reference](#) then all staves share accidentals, and if *context* is [Section “Staff” in Internals Reference](#) then all voices in the same staff share accidentals, but staves do not.

*procedure*    The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

**context**      The current context to which the rule should be applied.

**pitch**      The pitch of the note to be evaluated.

**barnum**      The current bar number.

**measurepos**      The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (**#t** . **#f**) does not make sense.

**autoCautionaries** (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

**extraNatural** (boolean)

Whether to typeset an extra natural sign before accidentals that reduce the effect of a previous alteration.

**harmonicAccidentals** (boolean)

If set, harmonic notes in chords get accidentals.

**internalBarNumber** (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the **Accidental\_engraver**.

**keySignature** (list)

The current key signature. This is an alist containing (*step* . *alter*) or ((*octave* . *step*) . *alter*), where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. **keySignature** = **#`((6 . ,FLAT))**.

**localKeySignature** (list)

The key signature at this point in the measure. The format is the same as for **keySignature**, but can also contain ((*octave* . *name*) . (*alter* *barnumber* . *measureposition*)) pairs.

Properties (write)

**localKeySignature** (list)

The key signature at this point in the measure. The format is the same as for **keySignature**, but can also contain ((*octave* . *name*) . (*alter* *barnumber* . *measureposition*)) pairs.

Context `PetrucchiStaff` can contain Section 2.1.3 [CueVoice], page 61 and Section 2.1.21 [PetrucchiVoice], page 187.

This context is built from the following engraver(s):

#### Section 2.2.1 [Accidental\_engraver], page 287

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at Staff level, but reads the settings for Accidental at Voice level, so you can `\override` them at Voice.

## Properties (read)

**autoAccidentals** (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used. Each entry in the list is either a symbol or a procedure.

*symbol*      The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is **Section “Score” in *Internals Reference*** then all staves share accidentals, and if *context* is **Section “Staff” in *Internals Reference*** then all voices in the same staff share accidentals, but staves do not.

*procedure*   The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

**context**      The current context to which the rule should be applied.

**pitch**        The pitch of the note to be evaluated.

**barnum**       The current bar number.

**measurepos**   The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (**#t** . **#f**) does not make sense.

**autoCautionaries** (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

**extraNatural** (boolean)

Whether to typeset an extra natural sign before accidentals that reduce the effect of a previous alteration.

**harmonicAccidentals** (boolean)

If set, harmonic notes in chords get accidentals.

**internalBarNumber** (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the `Accidental_engraver`.

**keySignature** (list)

The current key signature. This is an alist containing `(step . alter)` or `((octave . step) . alter)`, where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. `keySignature = #'((6 . ,FLAT))`.

**localKeySignature** (list)

The key signature at this point in the measure. The format is the same as for `keySignature`, but can also contain `((octave . name) . (alter barnumber . measureposition))` pairs.

Properties (write)

**localKeySignature** (list)

The key signature at this point in the measure. The format is the same as for `keySignature`, but can also contain `((octave . name) . (alter barnumber . measureposition))` pairs.

This context is built from the following engraver(s):

**[Section 2.2.8 \[Bar\\_number\\_engraver\]](#), page 291**

A bar number is created whenever `measurePosition` is zero and when there is a bar line (i.e., when `whichBar` is set). It is put on top of all staves, and appears only at the left side of the staff. The staves are taken from `stavesFound`, which is maintained by [Section 2.2.110 \[Staff\\_collecting\\_engraver\]](#), page 325.

Music types accepted:

[Section 1.2.2 \[alternative-event\]](#), page 42

Properties (read)

**`alternativeNumberingStyle`** (symbol)

The style of an alternative's bar numbers. Can be `numbers` for going back to the same number or `numbers-with-letters` for going back to the same number with letter suffixes. No setting will not go back in measure-number time.

**`barNumberFormatter`** (procedure)

A procedure that takes a bar number, measure position, and alternative number and returns a markup of the bar number to print.

**`barNumberVisibility`** (procedure)

A procedure that takes a bar number and a measure position and returns whether the corresponding bar number should be printed.

**`currentBarNumber`** (integer)

Contains the current barnumber. This property is incremented at every bar line.

**`stavesFound`** (list of grobs)

A list of all staff-symbols found.

**`whichBar`** (string)

This property is read to determine what type of bar line to create.

Example:

```
\set Staff.whichBar = "|:"
```

This will create a start-repeat bar in this staff only. Valid values are described in [Section “bar-line-interface” in \*Internals Reference\*](#).

Properties (write)

**currentBarNumber** (integer)

Contains the current barnumber. This property is incremented at every bar line.

This engraver creates the following layout object(s):

Section 3.1.12 [BarNumber], page 355.

Section 2.2.9 [Beam\_collision\_engraver], page 292

Help beams avoid colliding with notes and clefs in other voices.

Section 2.2.13 [Break\_align\_engraver], page 293

Align grobs with corresponding **break-align-symbols** into groups, and order the groups according to **breakAlignOrder**. The left edge of the alignment gets a separate group, with a symbol **left-edge**.

This engraver creates the following layout object(s):

Section 3.1.21 [BreakAlignGroup], page 362, Section 3.1.22 [BreakAlignment], page 362 and Section 3.1.59 [LeftEdge], page 398.

Section 2.2.22 [Concurrent\_hairpin\_engraver], page 296

Collect concurrent hairpins.

Section 2.2.26 [Default\_bar\_line\_engraver], page 297

This engraver determines what kind of automatic bar lines should be produced, and sets **whichBar** accordingly. It should be at the same level as Section 2.2.127 [Timing\_translator], page 330.

Properties (read)

**automaticBars** (boolean)

If set to false then bar lines will not be printed automatically; they must be explicitly created with a **\bar** command. Unlike the **\cadenzaOn** keyword, measures are still counted. Bar line generation will resume according to that count if this property is unset.

**barAlways** (boolean)

If set to true a bar line is drawn after each note.

**defaultBarType** (string)

Set the default type of bar line. See **whichBar** for information on available bar types.

This variable is read by Section “Timing\_translator” in *Internals Reference* at Section “Score” in *Internals Reference* level.

**measureLength** (moment)

Length of one measure in the current time signature.

**measurePosition** (moment)

How much of the current measure have we had. This can be set manually to create incomplete measures.

**whichBar** (string)

This property is read to determine what type of bar line to create.

Example:

```
\set Staff.whichBar = "|:"
```

This will create a start-repeat bar in this staff only. Valid values are described in [Section “bar-line-interface”](#) in *Internals Reference*.

Properties (write)

**automaticBars** (boolean)

If set to false then bar lines will not be printed automatically; they must be explicitly created with a `\bar` command. Unlike the `\cadenzaOn` keyword, measures are still counted. Bar line generation will resume according to that count if this property is unset.

Properties (read)

**currentMusicalColumn** (graphical (layout) object)

Grob that is X-parent to all non-breakable items (note heads, lyrics, etc.).

This engraver creates the following layout object(s):

[Section 3.1.43 \[FootnoteItem\]](#), page 383 and [Section 3.1.44 \[FootnoteSpanner\]](#), page 384.

Properties (read)

**currentMusicalColumn** (graphical (layout) object)

Grob that is X-parent to all non-breakable items (note heads, lyrics, etc.).

This engraver creates the following layout object(s):

[Section 3.1.47 \[GraceSpacing\]](#), page 388.

[Section 2.2.65 \[Mark\\_engraver\]](#), page 310

Create **RehearsalMark** objects. It puts them on top of all staves (which is taken from the property `stavesFound`). If moving this engraver to a different context, [Section 2.2.110 \[Staff\\_collecting\\_engraver\]](#), page 325 must move along, otherwise all marks end up on the same Y location.

Music types accepted:

[Section 1.2.35 \[mark-event\]](#), page 45

Properties (read)

**markFormatter** (procedure)

A procedure taking as arguments the context and the rehearsal mark. It should return the formatted mark as a markup object.

**rehearsalMark** (integer)  
The last rehearsal mark printed.

**stavesFound** (list of grobs)  
A list of all staff-symbols found.

This engraver creates the following layout object(s):

[Section 3.1.86 \[RehearsalMark\]](#), page 420.

#### [Section 2.2.69 \[Metronome\\_mark\\_engraver\]](#), page 311

Engrave metronome marking. This delegates the formatting work to the function in the **metronomeMarkFormatter** property. The mark is put over all staves. The staves are taken from the **stavesFound** property, which is maintained by [Section 2.2.110 \[Staff\\_collecting\\_engraver\]](#), page 325.

Music types accepted:

**currentMusicalColumn** (graphical (layout) object)  
Grob that is X-parent to all non-breakable items (note heads, lyrics, etc.).

**metronomeMarkFormatter** (procedure)  
How to produce a metronome markup. Called with two arguments: a **TempoChangeEvent** and context.

**stavesFound** (list of grobs)  
A list of all staff-symbols found.

**tempoHideNote** (boolean)  
Hide the note = count in tempo marks.

This engraver creates the following layout object(s):

[Section 3.1.68 \[MetronomeMark\]](#), page 404.

#### [Section 2.2.79 \[Output\\_property\\_engraver\]](#), page 315

Apply a procedure to any grob acknowledged.

Music types accepted:

[Section 1.2.4 \[apply-output-event\]](#), page 42

#### [Section 2.2.81 \[Paper\\_column\\_engraver\]](#), page 316

Take care of generating columns.

This engraver decides whether a column is breakable. The default is that a column is always breakable. However, every **Bar\_engraver** that does not have a barline at a certain point will set **forbidBreaks** in the score context to stop line breaks. In practice, this means that you can make a break point by creating a bar line (assuming that there are no beams or notes that prevent a break point).

Music types accepted:

[Section 1.2.12 \[break-event\]](#), page 43 and [Section 1.2.29 \[label-event\]](#), page 45

Properties (read)

`forbidBreak` (boolean)

If set to `#t`, prevent a line break at this point.

Properties (write)

`currentCommandColumn` (graphical (layout)  
object)

Grob that is X-parent to all current breakable (clef, key signature, etc.) items.

`currentMusicalColumn` (graphical (layout)  
object)

Set the default bar line for double repeats.

`endRepeatSegnoType` (string)

Set the default bar line for the combinations ending of repeat with segno. Default is `':|S'`.

`endRepeatType` (string)

Set the default bar line for the ending of repeats.

**startRepeatSegnoType** (string)  
Set the default bar line for the combinations beginning of repeat with segno. Default is ‘.S|:’.

This context is built from the following engraver(s):

Section 2.2.1 [Accidental\_engraver], page 287

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at **Staff** level, but reads the settings for **Accidental** at **Voice** level, so you can `\override` them at **Voice**.

Properties (read)

`autoAccidentals` (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used.

Each entry in the list is either a symbol or a procedure.

*symbol*      The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is **Section “Score” in *Internals Reference*** then all staves share accidentals, and if *context* is **Section “Staff” in *Internals Reference*** then all voices in the same staff share accidentals, but staves do not.

*procedure*    The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

**context**      The current context to which the rule should be applied.

**pitch**        The pitch of the note to be evaluated.

**barnum**       The current bar number.

**measurepos**    The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (**#t . #f**) does not make sense.

**autoCautionaries** (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

**extraNatural** (boolean)

Whether to typeset an extra natural sign before accidentals that reduce the effect of a previous alteration.

**harmonicAccidentals** (boolean)

If set, harmonic notes in chords get accidentals.

**internalBarNumber** (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the **Accidental\_engraver**.

**keySignature** (list)

The current key signature. This is an alist containing (*step* . *alter*) or ((*octave* . *step*) . *alter*), where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. `keySignature = #`((6 . ,FLAT))`.

**localKeySignature** (list)

The key signature at this point in the measure. The format is the same as for **keySignature**, but can also contain ((*octave* . *name*) . (*alter* *bar* *number* . *measureposition*)) pairs.

Properties (write)

Context `VaticanaStaff` can contain Section 2.1.3 [CueVoice], page 61 and Section 2.1.30 [VaticanaVoice], page 263.

This context is built from the following engraver(s):

#### Section 2.2.1 [Accidental\_engraver], page 287

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at Staff level, but reads the settings for Accidental at Voice level, so you can \override them at Voice.

Properties (read)

`autoAccidentals` (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used.

Each entry in the list is either a symbol or a procedure.

*symbol*      The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is **Section “Score” in *Internals Reference*** then all staves share accidentals, and if *context* is **Section “Staff” in *Internals Reference*** then all voices in the same staff share accidentals, but staves do not.

*procedure*    The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

*context*      The current context to which the rule should be applied.

*pitch*        The pitch of the note to be evaluated.

*barnum*       The current bar number.

*measurepos*    The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (**#t** . **#f**) does not make sense.

**autoCautionaries** (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

**extraNatural** (boolean)

Whether to typeset an extra natural sign before accidentals that reduce the effect of a previous alteration.

**harmonicAccidentals** (boolean)

If set, harmonic notes in chords get accidentals.

**internalBarNumber** (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the **Accidental\_engraver**.

**keySignature** (list)

The current key signature. This is an alist containing (*step* . *alter*) or ((*octave* . *step*) . *alter*), where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. `keySignature = #`((6 . ,FLAT))`.

**localKeySignature** (list)

The key signature at this point in the measure. The format is the same as for **keySignature**, but can also contain ((*octave* . *name*) . (*alter* *bar* *number* . *measureposition*)) pairs.

Properties (write)

**localKeySignature** (list)

The key signature at this point in the measure. The format is the same as for **keySignature**, but can also contain ((*octave* . *name*) . (*alter* *bar* *number* . *measureposition*)) pairs.

### 2.2.1 Accidental\_engraver

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at Staff level, but reads the settings for Accidental at Voice level, so you can `\override` them at Voice.

Properties (read)

`autoAccidentals` (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used.

Each entry in the list is either a symbol or a procedure.

*symbol* The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is [Section “Score” in \*Internals Reference\*](#) then all staves share accidentals, and if *context* is [Section “Staff” in \*Internals Reference\*](#) then all voices in the same staff share accidentals, but staves do not.

*procedure* The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

*context* The current context to which the rule should be applied.

*pitch* The pitch of the note to be evaluated.

*barnum* The current bar number.

*measurepos*

The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (*#t . #f*) does not make sense.

*autoCautionaries* (list)

List similar to *autoAccidentals*, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

*extraNatural* (boolean)

Whether to typeset an extra natural sign before accidentals that reduce the effect of a previous alteration.

*harmonicAccidentals* (boolean)

If set, harmonic notes in chords get accidentals.

*internalBarNumber* (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the *Accidental\_engraver*.

*keySignature* (list)

The current key signature. This is an alist containing (*step . alter*) or ((*octave . step*) . *alter*), where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. *keySignature* = *#`((6 . ,FLAT))*.

*localKeySignature* (list)

The key signature at this point in the measure. The format is the same as for *keySignature*, but can also contain ((*octave . name*) . (*alter barnumber . measureposition*)) pairs.

Properties (write)

*localKeySignature* (list)

The key signature at this point in the measure. The format is the same as for *keySignature*, but can also contain ((*octave . name*) . (*alter barnumber . measureposition*)) pairs.

`keySignature` (list)

`middleCClefPosition` (number)

The position of the middle C, as determined only by the clef. This can be calculated by looking at `clefPosition` and `clefGlyph`.

This property is read to determine what type of bar line to create.

Example:

```
\set Staff.whichBar = "|:"
```

This will create a start-repeat bar in this staff only. Valid values are described in [Section “bar-line-interface” in \*Internals Reference\*](#).

`associatedVoice` (string)

Name of the `Voice` that has the melody for this `Lyrics` line.

`autoAccidentals` (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used.

Each entry in the list is either a symbol or a procedure.

*symbol*     The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is [Section “Score” in \*Internals Reference\*](#) then all staves share accidentals, and if *context* is [Section “Staff” in \*Internals Reference\*](#) then all voices in the same staff share accidentals, but staves do not.

*procedure*   The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

`context`     The current context to which the rule should be applied.

`pitch`       The pitch of the note to be evaluated.

`barnum`      The current bar number.

`measurepos`

The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (`#t` . `#f`) does not make sense.

**autoBeamCheck** (procedure)

A procedure taking three arguments, *context*, *dir* [start/stop (-1 or 1)], and *test* [shortest note in the beam]. A non-**#f** return value starts or stops the auto beam.

**autoBeaming** (boolean)

If set to true then beams are generated automatically.

**autoCautionaries** (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

**automaticBars** (boolean)

If set to false then bar lines will not be printed automatically; they must be explicitly created with a **\bar** command. Unlike the **\cadenzaOn** keyword, measures are still counted. Bar line generation will resume according to that count if this property is unset.

**barAlways** (boolean)

If set to true a bar line is drawn after each note.

Standard settings:

**bar-extent** (pair of numbers):

`ly:bar-line::calc-bar-extent`

The Y-extent of the actual bar line. This may differ from **Y-extent** because it does not include the dots in a repeat bar line.

**break-align-anchor** (number):

`ly:bar-line::calc-anchor`

Grobs aligned to this break-align grob will have their X-offsets shifted by this number. In bar lines, for example, this is used to position grobs relative to the (visual) center of the bar line.

**break-align-symbol** (symbol):

`'staff-bar`

This key is used for aligning and spacing breakable items.

**break-visibility** (vector):

`bar-line::calc-break-visibility`

**extra-spacing-height** (pair of numbers):

`pure-from-neighbor-interface::account-for-span-bar`

In the horizontal spacing problem, we increase the height of each item by this amount (by adding the ‘car’ to the bottom of the item and adding the ‘cdr’ to the top of the item). In order to make a grob infinitely high (to prevent the horizontal spacing problem from placing any other grobs above or below this grob), set this to `(-inf.0 . +inf.0)`.

**gap** (dimension, in staff space):

`0.4`

Size of a gap in a variable symbol.

**glyph** (string):

`"|"`

A string determining what ‘style’ of glyph is typeset. Valid choices depend on the function that is reading this property.

**glyph-name** (string):

`bar-line::calc-glyph-name`

The glyph name within the font.

**hair-thickness** (number):  
 1.9  
 Thickness of the thin line in a bar line.

 3.0  
 Amount of extra white space to add. For bar lines, this is the amount of space after a thick line.

**layer** (integer):  
 0  
 An integer which determines the order of printing objects. Objects with the lowest value of layer are drawn first, then objects with progressively higher values are drawn, so objects with higher values overwrite objects with lower values. By default most objects are assigned a layer value of 1.

**non-musical** (boolean):  
 #t  
 True if the grob belongs to a `NonMusicalPaperColumn`.

**space-alist** (list):  
 '((time-signature extra-space . 0.75) (custos minimum-space . 2.0) (clef minimum-space . 1.0) (key-signature extra-space . 1.0) (key-cancellation extra-space . 1.0) (first-note fixed-space . 1.3) (next-note semi-fixed-space . 0.9) (right-edge extra-space . 0.0))  
 A table that specifies distances between prefatory items, like clef and time-signature. The format is an alist of spacing tuples: (*break-align-symbol type . distance*), where *type* can be the symbols *minimum-space* or *extra-space*.

**stencil** (stencil):  
 ly:bar-line::print  
 The symbol to print.

**thick-thickness** (number):

**break-align-symbols** (list):

'(left-edge staff-bar)

**extra-spacing-width** (pair of numbers):

'(+inf.0 . -inf.0)

In the horizontal spacing problem, we pad each item by this amount (by adding the 'car' on the left side of the item and adding the 'cdr' on the right side of the item). In order to make a grob take up no horizontal space at all, set this to (+inf.0 . -inf.0).

  around, and ignore. inside adjusts the slur if needed to keep the
  grob inside the slur. outside moves the grob vertically to the outside
  of the slur. around moves the grob vertically to the outside of the slur

  the 'cdr' to the top of the item). In order to make a grob infinitely
  high (to prevent the horizontal spacing problem from placing any other
  grobs above or below this grob), set this to (-inf.0 . +inf.0).

glyph-name (string):
  ly:clef::calc-glyph-name
  The glyph name within the font.

```

**non-musical** (boolean):

**connect-to-neighbor** (pair):  
`ly:tuplet-bracket::calc-connect-to-neighbors`  
 Pair of booleans, indicating whether this grob looks as a continued break.

**direction** (direction):  
 1  
 If `side-axis` is 0 (or X), then this property determines whether the object is placed `LEFT`, `CENTER` or `RIGHT` with respect to the other object. Otherwise, it determines whether the object is placed `UP`, `CENTER` or `DOWN`. Numerical values may also be used: `UP=1`, `DOWN=-1`, `LEFT=-1`, `RIGHT=1`, `CENTER=0`.

**edge-height** (pair):  
`'(0.7 . 0.7)`

**padding** (dimension, in staff space):  
 2.0  
 Add this much extra space between objects that are next to each other.

**positions** (pair of numbers):  
`ly:tuplet-bracket::calc-positions`  
 Pair of staff coordinates (`left` . `right`), where both `left` and `right` are in `staff-space` units of the current staff. For slurs, this value selects which slur candidate to use; if extreme positions are requested, the closest one is taken.

**shorten-pair** (pair of numbers):  
`'(-0.2 . -0.2)`

 Maintain this much space between reference points and the staff. Its effect is to align objects of differing sizes (like the dynamics **p** and **f**) on their baselines.

**stencil** (stencil):  
`ly:tuplet-bracket::print`  
 The symbol to print.

**thickness** (number):  
 1.6

space-to-barline (boolean):
  #t
  If set, the distance between a note and the following non-musical column will be measured to the bar line instead of to the beginning of the non-musical column. If there is a clef change followed by a bar line, for example, this means that we will try to space the non-musical column as though the clef is not there.

In grobs whose notational significance depends on vertical position (such as accidentals, clefs, etc.), `outside` and `around` behave like `ignore`.

`control-points` (list):

### 3.1.101 StaffGrouper

StaffGrouper objects are not created by any engraver.

Standard settings:

**staff-staff-spacing** (list):  
`'((basic-distance . 9) (minimum-distance . 7) (padding . 1) (stretchability . 5))`

When applied to a staff-group’s **StaffGrouper** grob, this spacing alist controls the distance between consecutive staves within the staff-group. When applied to a staff’s **VerticalAxisGroup** grob, it controls the distance between the staff and the nearest staff below it in the same system, replacing any settings inherited from the **StaffGrouper** grob of the containing staff-group, if there is one. This property remains in effect even when non-staff lines appear between staves. The alist can contain the following keys:

- **basic-distance** – the vertical distance, measured in staff-spaces, between the reference points of the two items when no collisions would result, and no stretching or compressing is in effect.
- **minimum-distance** – the smallest allowable vertical distance, measured in staff-spaces, between the reference points of the two items, when compressing is in effect.
- **padding** – the minimum required amount of unobstructed vertical whitespace between the bounding boxes (or skylines) of the two items, measured in staff-spaces.
- **stretchability** – a unitless measure of the dimension’s relative propensity to stretch. If zero, the distance will not stretch (unless collisions would result).

**staffgroup-staff-spacing** (list):  
`'((basic-distance . 10.5) (minimum-distance . 8) (padding . 1) (stretchability . 9))`

The spacing alist controlling the distance between the last staff of the current staff-group and the staff just below it in the same system, even if one or more non-staff lines exist between the two staves. If the **staff-staff-spacing** property of the staff’s **VerticalAxisGroup** grob is set, that is used instead. See **staff-staff-spacing** for a description of the alist structure.

This object supports the following interface(s): [Section 3.2.43 \[grob-interface\]](#), page 487, [Section 3.2.103 \[spanner-interface\]](#), page 520 and [Section 3.2.104 \[staff-grouper-interface\]](#), page 521.

Standard settings:

`avoid-slur` (symbol):

'around

`'(+inf.0 . -inf.0)`

In the horizontal spacing problem, we pad each item by this amount (by adding the ‘car’ on the left side of the item and adding the ‘cdr’ on the right side of the item). In order to make a grob take up no horizontal space at all, set this to `(+inf.0 . -inf.0)`.

**outside-staff-priority** (number):

450

If set, the grob is positioned outside the staff in such a way as to avoid all collisions. In case of a potential collision, the grob with the smaller **outside-staff-priority** is closer to the staff.

    it encompasses.
```

```
connect-to-neighbor (pair):
    ly:tuplet-bracket::calc-connect-to-neighbors
    Pair of booleans, indicating whether this grob looks as a continued
    break.
```

```
direction (direction):
    ly:tuplet-bracket::calc-direction
    If side-axis is 0 (or X), then this property determines whether the
    object is placed LEFT, CENTER or RIGHT with respect to the other object.
    Otherwise, it determines whether the object is placed UP, CENTER or
    DOWN. Numerical values may also be used: UP=1, DOWN=-1, LEFT=-1,
    RIGHT=1, CENTER=0.
```

```
edge-height (pair):
    '(0.7 . 0.7)
    A pair of numbers specifying the heights of the vertical edges: (left-
    height . right-height).
```

```
full-length-to-extent (boolean):

```

```
padding (dimension, in staff space):

```

```
positions (pair of numbers):
    ly:tuplet-bracket::calc-positions
    Pair of staff coordinates (left . right), where both left and right are
    in staff-space units of the current staff. For slurs, this value selects
    which slur candidate to use; if extreme positions are requested, the
    closest one is taken.
```

```
shorten-pair (pair of numbers):
    '(-0.2 . -0.2)
    The lengths to shorten a text-spanner on both sides, for example a pedal
    bracket. Positive values shorten the text-spanner, while negative values
    lengthen it.
```

**staff-padding** (dimension, in staff space):  
 0.25

Standard settings:

**avoid-slur** (symbol):  
 'inside  
 Method of handling slur collisions. Choices are **inside**, **outside**, **around**, and **ignore**. **inside** adjusts the slur if needed to keep the grob inside the slur. **outside** moves the grob vertically to the outside of the slur. **around** moves the grob vertically to the outside of the slur only if there is a collision. **ignore** does not move either. In grobs whose notational significance depends on vertical position (such as accidentals, clefs, etc.), **outside** and **around** behave like **ignore**.

**direction** (direction):  
 tuplet-number::calc-direction  
 If **side-axis** is 0 (or X), then this property determines whether the object is placed LEFT, CENTER or RIGHT with respect to the other object. Otherwise, it determines whether the object is placed UP, CENTER or DOWN. Numerical values may also be used: UP=1, DOWN=-1, LEFT=-1, RIGHT=1, CENTER=0.

**nonstaff-unrelatedstaff-spacing** (list):  
`'((padding . 0.5))`  
 The spacing alist controlling the distance between the current non-staff line and the nearest staff in the opposite direction from **staff-affinity**, if there are no other non-staff lines between the two, and **staff-affinity** is either UP or DOWN.  When applied to a staff-group's **StaffGrouper** grob, this spacing alist controls the distance between consecutive staves within the staff-group. When applied to a staff's **VerticalAxisGroup** grob, it controls the distance between the staff and the nearest staff below it in the same system, replacing any settings inherited from the **StaffGrouper** grob of the containing staff-group, if there is one. This property remains in effect even when non-staff lines appear between staves. The alist can contain the following keys:

- **basic-distance** – the vertical distance, measured in staff-spaces, between the reference points of the two items when no collisions would result, and no stretching or compressing is in effect.
- **minimum-distance** – the smallest allowable vertical distance, measured in staff-spaces, between the reference points of the two items, when compressing is in effect.
- **padding** – the minimum required amount of unobstructed vertical whitespace between the bounding boxes (or skylines) of the two items, measured in staff-spaces.

**3.2.7 axis-group-interface**

An object that groups other layout objects.

**User settable properties:**

**axes** (list) List of axis numbers. In the case of alignment grobs, this should contain only one number.

**default-staff-staff-spacing** (list)

**max-stretch** (number)  
The maximum amount that this **VerticalAxisGroup** can be vertically stretched (for example, in order to better fill a page).

**no-alignment** (boolean)  
If set, don't place this grob in a **VerticalAlignment**; rather, place it using its own **Y-offset** callback.

**nonstaff-nonstaff-spacing** (list)  
The spacing alist controlling the distance between the current non-staff line and the next non-staff line in the direction of **staff-affinity**, if both are on the same side of the related staff, and **staff-affinity** is either UP or DOWN. See **staff-staff-spacing** for a description of the alist structure.

**nonstaff-relatedstaff-spacing** (list)  
The spacing alist controlling the distance between the current non-staff line and the nearest staff in the direction of **staff-affinity**, if there are no non-staff lines between the two, and **staff-affinity** is either UP or DOWN. If **staff-affinity** is CENTER, then **nonstaff-relatedstaff-spacing** is used for the nearest staves on *both* sides, even if other non-staff lines appear between the current one and either of the staves. See **staff-staff-spacing** for a description of the alist structure.

**nonstaff-unrelatedstaff-spacing** (list)  
The spacing alist controlling the distance between the current non-staff line and the nearest staff in the opposite direction from **staff-affinity**, if there are no other non-staff lines between the two, and **staff-affinity** is either UP or DOWN. See **staff-staff-spacing** for a description of the alist structure.

**staff-affinity** (direction)  
The direction of the staff to use for spacing the current non-staff line. Choices are UP, DOWN, and CENTER. If CENTER, the non-staff line will be

placed equidistant between the two nearest staves on either side, unless collisions or other spacing constraints prevent this. Setting **staff-affinity** for a staff causes it to be treated as a non-staff line. Setting **staff-affinity** to **#f** causes a non-staff line to be treated as a staff.

**staff-staff-spacing** (list)

When applied to a staff-group's **StaffGrouper** grob, this spacing alist controls the distance between consecutive staves within the staff-group. When applied to a staff's **VerticalAxisGroup** grob, it controls the distance between the staff and the nearest staff below it in the same system, replacing any settings inherited from the **StaffGrouper** grob of the containing staff-group, if there is one. This property remains in effect even when non-staff lines appear between staves. The alist can contain the following keys:

- **basic-distance** – the vertical distance, measured in staff-spaces, between the reference points of the two items when no collisions would result, and no stretching or compressing is in effect.
- **minimum-distance** – the smallest allowable vertical distance, measured in staff-spaces, between the reference points of the two items, when compressing is in effect.
- **padding** – the minimum required amount of unobstructed vertical whitespace between the bounding boxes (or skylines) of the two items, measured in staff-spaces.
- **stretchability** – a unitless measure of the dimension's relative propensity to stretch. If zero, the distance will not stretch (unless collisions would result).

**vertical-skylines** (pair of skylines)

For predictable results, use **LEFT** and **RIGHT**.

This grob interface is used in the following graphical object(s): [Section 3.1.10 \[BalloonTextItem\]](#), page 353, [Section 3.1.43 \[FootnoteItem\]](#), page 383 and [Section 3.1.44 \[FootnoteSpanner\]](#), page 384.

### 3.2.9 bar-line-interface

Print a special bar symbol. It replaces the regular bar symbol with a special symbol. The argument *bartype* is a string which specifies the kind of bar line to print. Options are |, :|, |: , :|: , :|. |: , :|. |: , ., ||, |., .|, .|. , |.|, :, **dashed**, ' and **S**.

These produce, respectively, a normal bar line, a right repeat, a left repeat, a thick double repeat, a thin-thick-thin double repeat, a thin-thick double repeat, a thick bar, a double bar, a start bar, an end bar, a thick double bar, a thin-thick-thin bar, a dotted bar, a dashed bar, a tick as bar line and a segno bar.

In addition, there is an option ||: which is equivalent to |: except at line breaks, where it produces a double bar (||) at the end of the line and a repeat sign (|:) at the beginning of the new line.

For segno, **S** produces a segno sign except at line breaks, where it produces a double bar (||) at the end of the line and a segno sign at the beginning of the new line. |**S** is equivalent to **S** but produces a simple bar line (|) instead of a double bar line (||) at line breaks. **S**| produces the segno sign at line breaks and starts the following line without special bar lines.

**S**|: and |: **S** are used for repeat/segno combinations that are separated at line breaks. Alternatively, .**S**|: and |: **S**. may be used which combine repeat signs and segno at the same line in case of a line break. |: **S**|: is a combination of a left repeat (:|), a segno (**S**) and a right repeat |: which splits before the segno at line breaks; |: **S**.|: splits after the segno sign.

If *bartype* is set to **empty** then nothing is printed, but a line break is allowed at that spot.

**gap** is used for the gaps in dashed bar lines.

(**minimum-space** . *spc*)  
Pad space until the distance is *spc*.  
(**fixed-space** . *spc*)  
Set a fixed space.  
(**semi-fixed-space** . *spc*)

(**extra-space** . *spc*)  
Add *spc* amount of space.

Special keys for the alist are **first-note** and **next-note**, signifying the first note on a line, and the next note halfway a line.

For example, clefs are put after key signatures by setting

```
\override Score.BreakAlignment #'break-align-orders =
  #(make-vector 3 '(span-bar
                    breathing-sign
                    staff-bar

## Internal properties:

**elements** (array of grobs)

This grob interface is used in the following graphical object(s): [Section 3.1.48 \[GridLine\]](#), [page 388](#).

### 3.2.42 grid-point-interface

A spanning point for grid lines.

This grob interface is used in the following graphical object(s): [Section 3.1.49 \[GridPoint\]](#), [page 389](#).

### 3.2.43 grob-interface

A grob represents a piece of music notation.

All grobs have an X and Y position on the page. These X and Y positions are stored in a relative format, thus they can easily be combined by stacking them, hanging one grob to the side of another, or coupling them into grouping objects.

Each grob has a reference point (a.k.a. parent): The position of a grob is stored relative to that reference point. For example, the X reference point of a staccato dot usually is the note head that it applies to. When the note head is moved, the staccato dot moves along automatically.

A grob is often associated with a symbol, but some grobs do not print any symbols. They take care of grouping objects. For example, there is a separate grob that stacks staves vertically. The [Section 3.1.73 \[NoteCollision\]](#), [page 410](#) object is also an abstract grob: It only moves around chords, but doesn't print anything.

Grobs have properties (Scheme variables) that can be read and set. Two types of them exist: immutable and mutable. Immutable variables define the default style and behavior. They are shared between many objects. They can be changed using `\override` and `\revert`. Mutable properties are variables that are specific to one grob. Typically, lists of other objects, or results from computations are stored in mutable properties. In particular, every call to `ly:grob-set-property!` (or its C++ equivalent) sets a mutable property.

The properties `after-line-breaking` and `before-line-breaking` are dummies that are not user-serviceable.

## User settable properties:

**X-extent** (pair of numbers)

Hard coded extent in X direction.

**X-offset** (number)

The horizontal amount that this object is moved relative to its X-parent.

**Y-extent** (pair of numbers)

Hard coded extent in Y direction.

**Y-offset** (number)

The vertical amount that this object is moved relative to its Y-parent.

**after-line-breaking** (boolean)

Dummy property, used to trigger callback for `after-line-breaking`.

**avoid-slur** (symbol)

Method of handling slur collisions. Choices are `inside`, `outside`, `around`, and `ignore`. `inside` adjusts the slur if needed to keep the

grob inside the slur. **outside** moves the grob vertically to the outside of the slur. **around** moves the grob vertically to the outside of the slur only if there is a collision. **ignore** does not move either. In grobs whose notational significance depends on vertical position (such as accidentals, clefs, etc.), **outside** and **around** behave like **ignore**.

**before-line-breaking** (boolean)

Dummy property, used to trigger a callback function.

**color** (color)

The color of this grob.

**id** (string)

An id string for the grob. Depending on the typesetting backend being used, this id will be assigned to a group containing all of the stencils that comprise a given grob. For example, in the svg backend, the string will be assigned to the **id** attribute of a group (<g>) that encloses the stencils that comprise the grob. In the Postscript backend, as there is no way to group items, the setting of the id property will have no effect.

**extra-X-extent** (pair of numbers)

A grob is enlarged in X dimension by this much.

**extra-Y-extent** (pair of numbers)

A grob is enlarged in Y dimension by this much.

**extra-offset** (pair of numbers)

A pair representing an offset. This offset is added just before outputting the symbol, so the typesetting engine is completely oblivious to it. The values are measured in **staff-space** units of the staff's **StaffSymbol**.

**footnote-music** (music)

Music creating a footnote.

**forced-spacing** (number)

Spacing forced between grobs, used in various ligature engravers.

**layer** (integer)

An integer which determines the order of printing objects. Objects with the lowest value of layer are drawn first, then objects with progressively higher values are drawn, so objects with higher values overwrite objects with lower values. By default most objects are assigned a layer value of 1.

**minimum-X-extent** (pair of numbers)

Minimum size of an object in X dimension, measured in **staff-space** units.

**minimum-Y-extent** (pair of numbers)

Minimum size of an object in Y dimension, measured in **staff-space** units.

**outside-staff-horizontal-padding** (number)

By default, an outside-staff-object can be placed so that it is very close to another grob horizontally. If this property is set, the outside-staff-object is raised so that it is not so close to its neighbor.

**outside-staff-padding** (number)

The padding to place between this grob and the staff when spacing according to **outside-staff-priority**.

- outside-staff-priority** (number)  
If set, the grob is positioned outside the staff in such a way as to avoid all collisions. In case of a potential collision, the grob with the smaller **outside-staff-priority** is closer to the staff.
- rotation** (list)  
Number of degrees to rotate this object, and what point to rotate around. For example, '(45 0 0) rotates by 45 degrees around the center of this object.
- springs-and-rods** (boolean)  
Dummy variable for triggering spacing routines.
- stencil** (stencil)  
The symbol to print.
- transparent** (boolean)  
This makes the grob invisible.
- whiteout** (boolean)  
If true, the grob is printed over a white background to white-out underlying material, if the grob is visible. Usually #f by default.

### Internal properties:

- axis-group-parent-X** (graphical (layout) object)  
Containing X axis group.
- axis-group-parent-Y** (graphical (layout) object)  
Containing Y axis group.
- cause** (any type)  
Any kind of causation objects (i.e., music, or perhaps translator) that was the cause for this grob.
- cross-staff** (boolean)  
For a beam or a stem, this is true if we depend on inter-staff spacing.
- interfaces** (list)  
A list of symbols indicating the interfaces supported by this object. It is initialized from the **meta** field.
- meta** (list) Provide meta information. It is an alist with the entries **name** and **interfaces**.

### 3.2.49 item-interface

Grobs can be distinguished in their role in the horizontal spacing. Many grobs define constraints on the spacing by their sizes, for example, note heads, clefs, stems, and all other symbols with a fixed shape. These grobs form a subtype called **Item**.

Some items need special treatment for line breaking. For example, a clef is normally only printed at the start of a line (i.e., after a line break). To model this, ‘breakable’ items (clef, key signature, bar lines, etc.) are copied twice. Then we have three versions of each breakable item: one version if there is no line break, one version that is printed before the line break (at the end of a system), and one version that is printed after the line break.

Whether these versions are visible and take up space is determined by the outcome of the **break-visibility** grob property, which is a function taking a direction (-1, 0 or 1) as an argument. It returns a cons of booleans, signifying whether this grob should be transparent and have no extent.

The following variables for **break-visibility** are predefined:

grob will show:	before	no	after
	break	break	break
<b>all-invisible</b>	no	no	no

<code>begin-of-line-visible</code>	<code>no</code>	<code>no</code>	<code>yes</code>
<code>end-of-line-visible</code>	<code>yes</code>	<code>no</code>	<code>no</code>
<code>all-visible</code>	<code>yes</code>	<code>yes</code>	<code>yes</code>
<code>begin-of-line-invisible</code>	<code>yes</code>	<code>yes</code>	<code>no</code>
<code>end-of-line-invisible</code>	<code>no</code>	<code>yes</code>	<code>yes</code>
<code>center-invisible</code>	<code>yes</code>	<code>no</code>	<code>yes</code>

## User settable properties:

### `break-visibility` (vector)

A vector of 3 booleans, `#{end-of-line unbroken begin-of-line}`. `#t` means visible, `#f` means killed.

### `extra-spacing-height` (pair of numbers)

In the horizontal spacing problem, we increase the height of each item by this amount (by adding the ‘car’ to the bottom of the item and adding the ‘cdr’ to the top of the item). In order to make a grob infinitely high (to prevent the horizontal spacing problem from placing any other grobs above or below this grob), set this to `(-inf.0 . +inf.0)`.

### `extra-spacing-width` (pair of numbers)

In the horizontal spacing problem, we pad each item by this amount (by adding the ‘car’ on the left side of the item and adding the ‘cdr’ on the right side of the item). In order to make a grob take up no horizontal space at all, set this to `(+inf.0 . -inf.0)`.

### `non-musical` (boolean)

True if the grob belongs to a `NonMusicalPaperColumn`.

**3.2.101 spacing-spanner-interface**

The space taken by a note is dependent on its duration. Doubling a duration adds `spacing-increment` to the space. The most common shortest note gets `shortest-duration-space`. Notes that are even shorter are spaced proportional to their duration.

Typically, the increment is the width of a black note head. In a piece with lots of 8th notes, and some 16th notes, the eighth note gets a 2 note heads width (i.e., the space following a note is a 1 note head width). A 16th note is followed by 0.5 note head width. The quarter note is followed by 3 NHW, the half by 4 NHW, etc.

**User settable properties:**

`average-spacing-wishes` (boolean)  
 If set, the spacing wishes are averaged over staves.

`base-shortest-duration` (moment)  
 Spacing is based on the shortest notes in a piece. Normally, pieces are spaced as if notes at least as short as this are present.

`common-shortest-duration` (moment)  
 The most common shortest note length. This is used in spacing. Enlarging this sets the score tighter.

`packed-spacing` (boolean)  
 If set, the notes are spaced as tightly as possible.

`shortest-duration-space` (dimension, in staff space)  
 Start with this much space for the shortest duration. This is expressed in `spacing-increment` as unit. See also [Section “spacing-spanner-interface” in \*Internals Reference\*](#).

**spacing-increment** (number)

Add this much space for a doubled duration. Typically, the width of a note head. See also [Section “spacing-spanner-interface” in \*Internals Reference\*](#).

**strict-grace-spacing** (boolean)

If set, main notes are spaced normally, then grace notes are put left of the musical columns for the main notes.

**strict-note-spacing** (boolean)

If set, unbroken columns with non-musical material (clefs, bar lines, etc.) are not spaced separately, but put before musical columns.

**uniform-stretching** (boolean)

If set, items stretch proportionally to their durations. This looks better in complex polyphonic patterns.

This grob interface is used in the following graphical object(s): [Section 3.1.98 \[SpacingSpanner\]](#), [page 429](#).

Represents left and right placement over the total spanner, where the width of the spanner is normalized between 0 and 1.
- minimum-length** (dimension, in staff space)  
Try to make a spanner at least this long, normally in the horizontal direction. This requires an appropriate callback for the **springs-and-rods** property. If added to a **Tie**, this sets the minimum distance between noteheads.
- spanner-id** (string)  
An identifier to distinguish concurrent spanners.
- to-barline** (boolean)

**3.2.104 staff-grouper-interface**

A grob that collects staves together.

## User settable properties:

### `staff-staff-spacing` (list)

When applied to a staff-group's `StaffGrouper` grob, this spacing alist controls the distance between consecutive staves within the staff-group. When applied to a staff's `VerticalAxisGroup` grob, it controls the distance between the staff and the nearest staff below it in the same system, replacing any settings inherited from the `StaffGrouper` grob of the containing staff-group, if there is one. This property remains in effect even when non-staff lines appear between staves. The alist can contain the following keys:

- **basic-distance** – the vertical distance, measured in staff-spaces, between the reference points of the two items when no collisions would result, and no stretching or compressing is in effect.
- **minimum-distance** – the smallest allowable vertical distance, measured in staff-spaces, between the reference points of the two items, when compressing is in effect.
- **padding** – the minimum required amount of unobstructed vertical whitespace between the bounding boxes (or skylines) of the two items, measured in staff-spaces.
- **stretchability** – a unitless measure of the dimension's relative propensity to stretch. If zero, the distance will not stretch (unless collisions would result).

### `staffgroup-staff-spacing` (list)

The spacing alist controlling the distance between the last staff of the current staff-group and the staff just below it in the same system, even if one or more non-staff lines exist between the two staves. If the `staff-staff-spacing` property of the staff's `VerticalAxisGroup` grob is set, that is used instead. See `staff-staff-spacing` for a description of the alist structure.

This grob interface is used in the following graphical object(s): [Section 3.1.101 \[StaffGrouper\]](#), [page 432](#).

## 3.2.105 staff-spacing-interface

**space-to-barline** (boolean)

If set, the distance between a note and the following non-musical column will be measured to the bar line instead of to the beginning of the non-musical column. The direction of the staff to use for spacing the current non-staff line. Choices are UP, DOWN, and CENTER. If CENTER, the non-staff line will be placed equidistant between the two nearest staves on either side, unless collisions or other spacing constraints prevent this. Setting **staff-affinity** for a staff causes it to be treated as a non-staff line. Setting **staff-affinity** to **#f** causes a non-staff line to be treated as a staff.

**staff-staff-spacing** (list)

When applied to a staff-group’s **StaffGrouper** grob, this spacing alist controls the distance between consecutive staves within the staff-group. When applied to a staff’s **VerticalAxisGroup** grob, it controls the distance between the staff and the nearest staff below it in the same system, replacing any settings inherited from the **StaffGrouper** grob of the containing staff-group, if there is one. This property remains in effect even when non-staff lines appear between staves. The alist can contain the following keys:

- **basic-distance** – the vertical distance, measured in staff-spaces, between the reference points of the two items when no collisions would result, and no stretching or compressing is in effect.
- **minimum-distance** – the smallest allowable vertical distance, measured in staff-spaces, between the reference points of the two items, when compressing is in effect.
- **padding** – the minimum required amount of unobstructed vertical whitespace between the bounding boxes (or skylines) of the two items, measured in staff-spaces.

**staffgroup-staff-spacing** (list)

The spacing alist controlling the distance between the last staff of the current staff-group and the staff just below it in the same system, even if one or more non-staff lines exist between the two staves. A *moment* is a point in musical time. It consists of a pair of rationals (*m*, *g*), where *m* is the timing for the main notes, and *g* the timing for grace notes. In absence of grace notes, *g* is zero.  
  
For compatibility reasons, it is possible to write two numbers specifying numerator and denominator instead of the rationals. These forms cannot be mixed, and the two-argument form is disambiguated by the sign of the second argument: if it is positive, it can only be a denominator and not a grace timing.

<b>ly:stencil-in-color</b> <i>stc r g b</i>	[Function]
Put <i>stc</i> in a different color.	
<b>ly:stencil-rotate</b> <i>stil angle x y</i>	[Function]
Return a stencil <i>stil</i> rotated <i>angle</i> degrees around the relative offset ( <i>x</i> , <i>y</i> ). E.g., an offset of (-1, 1) will rotate the stencil around the left upper corner.	
<b>ly:stencil-rotate-absolute</b> <i>stil angle x y</i>	[Function]
Return a stencil <i>stil</i> rotated <i>angle</i> degrees around point ( <i>x</i> , <i>y</i> ), given in absolute coordinates.	
<b>ly:stencil-scale</b> <i>stil x y</i>	[Function]
Scale <i>stil</i> using the horizontal and vertical scaling factors <i>x</i> and <i>y</i> .	
<b>ly:stencil-translate</b> <i>stil offset</i>	[Function]
Return a <i>stil</i> , but translated by <i>offset</i> (a pair of numbers).	

- ly:stencil-translate-axis** *stil amount axis* [Function]  
Return a copy of *stil* but translated by *amount* in *axis* direction.
- ly:stream-event?** *obj* [Function]  
Is *obj* a `Stream_event` object?
- ly:string-percent-encode** *str* [Function]  
Encode all characters in string *str* with hexadecimal percent escape sequences, with the following exceptions: characters `-`, `.`, `/`, and `_`; and characters in ranges `0-9`, `A-Z`, and `a-z`.
- ly:string-substitute** *a b s* [Function]  
Replace string *a* by string *b* in string *s*.
- ly:system-font-load** *name* [Function]  
Load the OpenType system font '*name.otf*'. Fonts loaded with this command must contain three additional SFNT font tables called LILC, LILF, and LILY, needed for typesetting musical elements. Currently, only the Emmentaler and the Emmentaler-Brace fonts fulfill these requirements.  
Note that only `ly:font-get-glyph` and derived code (like `\lookup`) can access glyphs from the system fonts; text strings are handled exclusively via the Pango interface.
- ly:text-interface::interpret-markup** [Function]  
Convert a text markup into a stencil. Takes three arguments, *layout*, *props*, and *markup*.  
*layout* is a `\layout` block; it may be obtained from a grob with `ly:grob-layout`. *props* is an alist chain, i.e. a list of alists. This is typically obtained with `(ly:grob-alist-chain grob (ly:output-def-lookup layout 'text-font-defaults))`. *markup* is the markup text to be processed.
- ly:translate-cpp-warning-scheme** *str* [Function]  
Translates a string in C++ `printf` format and modifies it to use it for scheme formatting.
- ly:translator?** *x* [Function]  
Is *x* a `Translator` object?
- ly:translator-context** *trans* [Function]  
Return the context of the translator object *trans*.
- ly:translator-description** *me* [Function]  
Return an alist of properties of translator *me*.
- ly:translator-group?** *x* [Function]  
Is *x* a `Translator_group` object?
- ly:translator-name** *trans* [Function]  
Return the type name of the translator object *trans*. The name is a symbol.
- ly:transpose-key-alist** *l pit* [Function]  
Make a new key alist of *l* transposed by pitch *pit*.
- ly:truncate-list!** *lst i* [Function]  
Take at most the first *i* of list *lst*.
- ly:ttf->pfa** *ttf-file-name idx* [Function]  
Convert the contents of a TrueType font file to PostScript Type 42 font, returning it as a string. The optional *idx* argument is useful for TrueType collections (TTC) only; it specifies the font index within the TTC. The default value of *idx* is 0.

- ly:ttf-ps-name** *ttf-file-name idx* [Function]  
 Extract the PostScript name from a TrueType font. The optional *idx* argument is useful for TrueType collections (TTC) only; it specifies the font index within the TTC. The default value of *idx* is 0.
- ly:undead?** *x* [Function]  
 Is *x* a **Undead** object?
- ly:unit** [Function]  
 Return the unit used for lengths as a string.
- ly:unpure-pure-container?** *clos* [Function]  
 Is *clos* an unpure pure container?

 Return the current lilypond version as a list, e.g., (1 3 127 uu1).
- ly:warning** *str rest* [Function]  
 A Scheme callable function to issue the warning *str*. The message is formatted with **format** and *rest*.
- ly:warning-located** *location str rest* [Function]  
 A Scheme callable function to issue the warning *str* at the specified location in an input file. The message is formatted with **format** and *rest*.
- ly:wide-char->utf-8** *wc* [Function]
