2 Options

rows [5] defines the number of rows in the grid.

columns [5] specifies the number of columns in the grid

sudoku [false] sets rows and columns to 9, in case of *(true)* is specified. Additionally the classic Sudoku grid is drawn.

width [6.7cm] sets the width of the minipage, in which the grid is typeset.

scale [1] scales the size of the grid in the minipage.

fontsize [Large] specifies the size of the numbers next to the grid. Here, the usual L^AT_EX sizes are used. Possible values: tiny, scriptsize, footnotesize, small, normalsize, large, Large, LARGE, huge, Huge

title [] sets the title of a puzzle.

titleindent [0.75cm] defines the indent of the title.

titlewidth [5.85cm] specifies the width of the box the title is set in.

bgcolor [] sets the background color of the grid.

counterstyle [none] defines the counter style. Predefined styles: none, left, right

cvoffset [-38pt] sets the vertical offset of the counters in the margin.

3 Environments

3.1 skyline

```
\begin{skyline}[<options>]
...
\end{skyline}
```

The skyline environment is the central core of the style file. With the optional argument of the environment, you can reset the options with local scope. Here, a blank grid is created.

3.2 puzzlebackground

```
\begin{puzzlebackground}
...
\end{puzzlebackground}
```

The puzzlebackground environment allows you to place elements behind the main layer. This is for example usefull for the `\fillarea` command.

3.3 puzzleforeground

```
\begin{puzzleforeground}
...
\end{puzzleforeground}
```

The puzzleforeground environment allows you to place elements in front of the main layer. This is for example usefull for the `\framearea` command.

4 Commands

4.1 In the grid and around

4.1.1 skylineT

```
\skylineT{<csv list>}
```

The command `\skylineT` typesets the numbers above the grid indicating how many skyscrapers are visible. It expects a comma-separated list as an argument.

4.1.2 skylineB

`\skylineB{<csv list>}` The command `\skylineB` typesets the numbers below the grid.

4.1.3 skylineL

`\skylineL{<csv list>}` The command `\skylineL` typesets the numbers left to the grid.

4.1.4 skylineR

`\skylineR{<csv list>}` The command `\skylineR` typesets the numbers right to the grid.

4.1.5 skylinecell

`\skylinecell{<column>}{<row>}`
`{<height>}` The command `\skylinecell` sets the *<height>* of the grid cell *<column>**<row>*.

4.1.6 setrow

`\setrow{<row>}{<csv list>}` The command `\setrow` sets the heights of *<row>*. It expects a comma-separated list.

4.1.7 setcolumn

`\setcolumn{<column>}{<csv list>}` The command `\setcolumn` sets the heights of *<column>*.

4.1.8 framearea

`\framearea{<color>}{<tikz path>}` The command `\framearea` frames the area given by *<tikz path>* with color *<color>*. The reference for coordinates is the bottom left corner of the cell.

```
1 \framearea{green}{(2,2) -- (2,3) -- (3,3) -- (3,2) -- (2,2)}
```

This command will color the frame of the grid cell (2,2) green. You should consider using this command in the `puzzleforeground` environment.

4.1.9 fillarea

`\fillarea{<color>}{<tikz path>}` The command `\fillarea` fills the area given by *<tikz path>* with color *<color>*. The reference for coordinates is the bottom left corner of the cell. You should consider using this command in the `puzzlebackground` environment.

4.2 Presentation

4.2.1 definecounterstyle

`\definecounterstyle{<name>}`
`{<definition>}` The command `\definecounterstyle` allows you to define your own styles. For example, the style `left` is defined as follows:

```

1 \definecounterstyle{left}{
2   \begingroup\reversemarginpar\marginnote{
3     \tikz\node[shape=rectangle,fill=yellow!40,inner sep=7pt,
4       draw,rounded corners=3pt,thick]
5     {\Huge\puzzlecounter}};\LP@cvmoffset]\endgroup}
6 }

```

To typeset the counter into the margin we use the command `\marginnote`. We need to use the command `\reversemarginpar` to set the counter into the left margin. Of course, we must use this command in a group for local scope. Finally we use `\puzzlecounter` in a `\tikz` node with a vertical offset set with the option `cvoffset`.

4.2.2 puzzlecounter

`\puzzlecounter` The command `\puzzlecounter` provides the counter in textual form to use it for example in `\definecounterstyle`.

4.2.3 titleformat

`\titleformat{<format>}` With the command `\titleformat`, you can define the format of the title. By default, the definition is as follows:

```

1 \titleformat{\centering\Large\color{blue}}

```

4.3 Miscellaneous

4.3.1 skylinesetup

`\skylinesetup{<options>}` With the command `\skylinesetup` you can reset the options with global scope.

4.3.2 setpuzzlecounter

`\setpuzzlecounter{<number>}` With the command `\setpuzzlecounter`, you can reset the puzzle counter, for example before the solutions.

5 Supported variants

5.1 Skyline Sudoku

	4	1	3	2	3	5	3	2	3	
2				8				7		4
3			4			6			8	2
3		2		7					1	3
3					8	2				2
1			2		4		7			4
2				3			4			3
2					1					1
2		3					1	2		3
4			5							3
